

1.0 <u>SCOPE</u>

This Application Specification covers the application and end-usage requirements for the Squba 1.8 Sealed Wire-To-Wire, 1.80mm pitch single row connector series which uses copper terminals with tin plated contact interface terminated with 22 to 24 AWG wire using Molex crimp technology. The mated system meets IP68 requirements.

2.0 PRODUCT DESCRIPTION

2.1 NAMES AND SERIES NUMBER(S)

Description	Series
Description	Number
Squba 1.8, Receptacle Assembly	204220
Squba 1.8, Plug Assembly	204223
Squba 1.8, Plug Assembly with Clip Slot	204223
Squba 1.8, Receptacle Crimp Terminal	204301
Squba 1.8, Plug Crimp Terminal	204226
Squba Plug Weather Cap	220423
Squba Receptacle Weather Cap	220424

2.2 DIMENSIONS, MATERIALS, PLATINGS AND MARKINGS

See the appropriate sales drawings for the information on dimensions, materials, platings and markings.

4.3 WEATHER CAPS

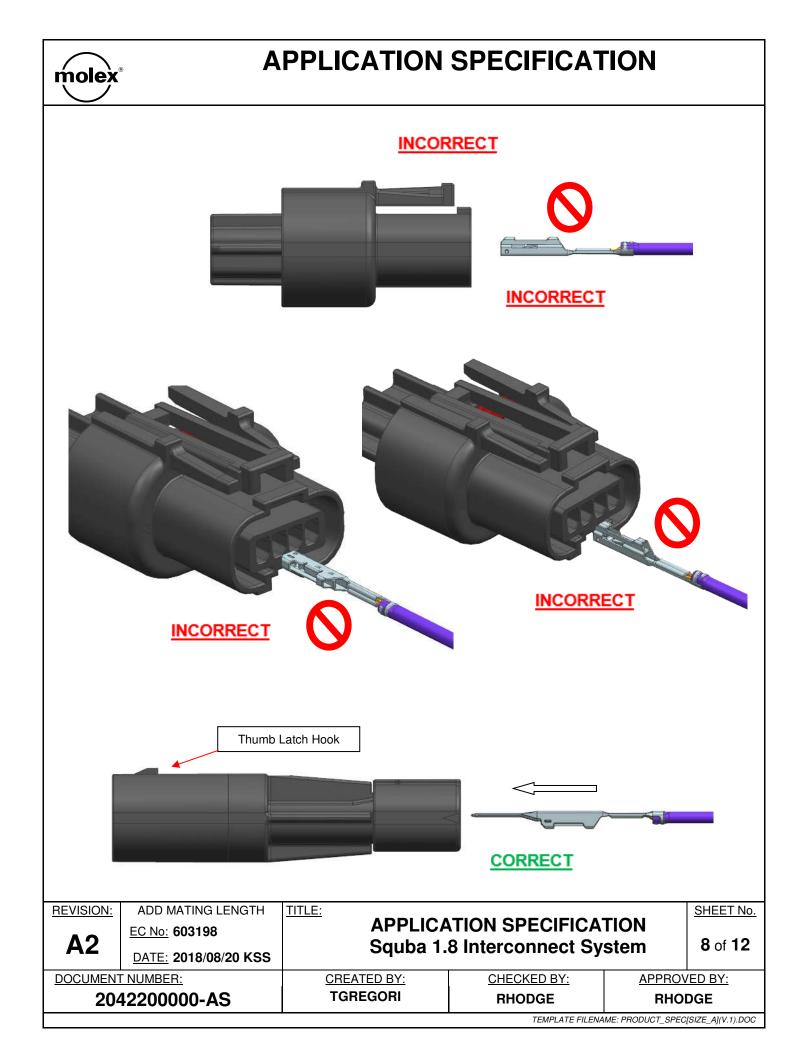

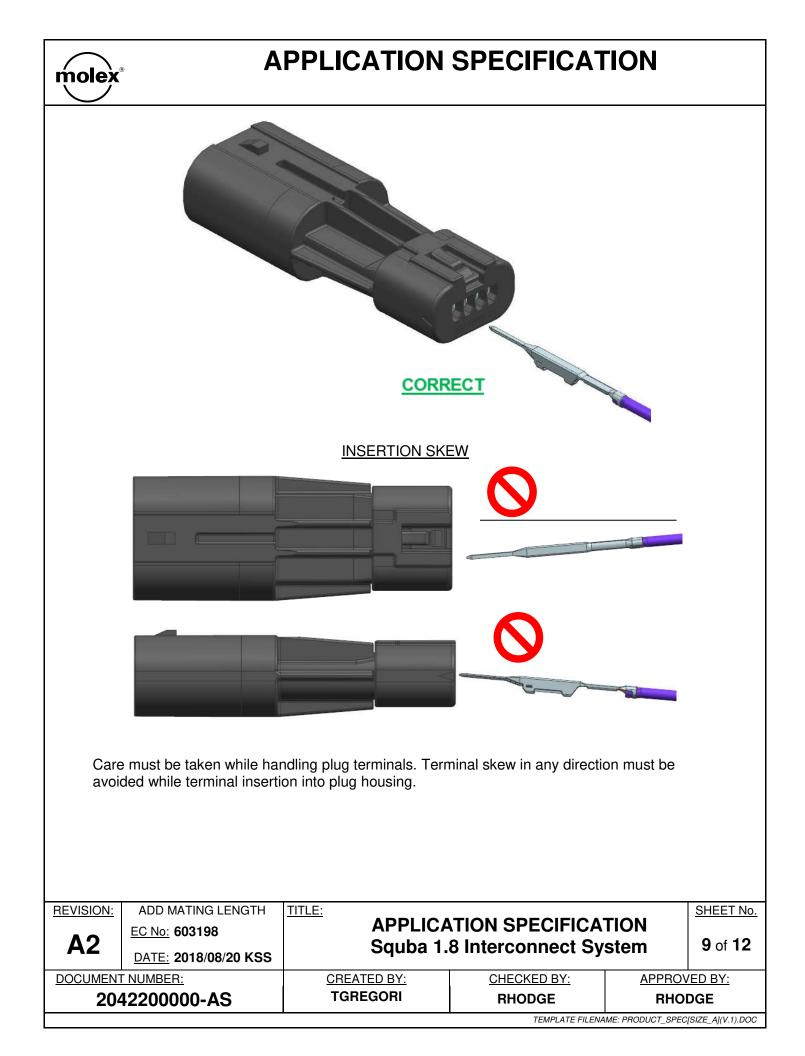

5.0 TERMINAL ORIENTATION DURING INSERTION INTO HOUSING

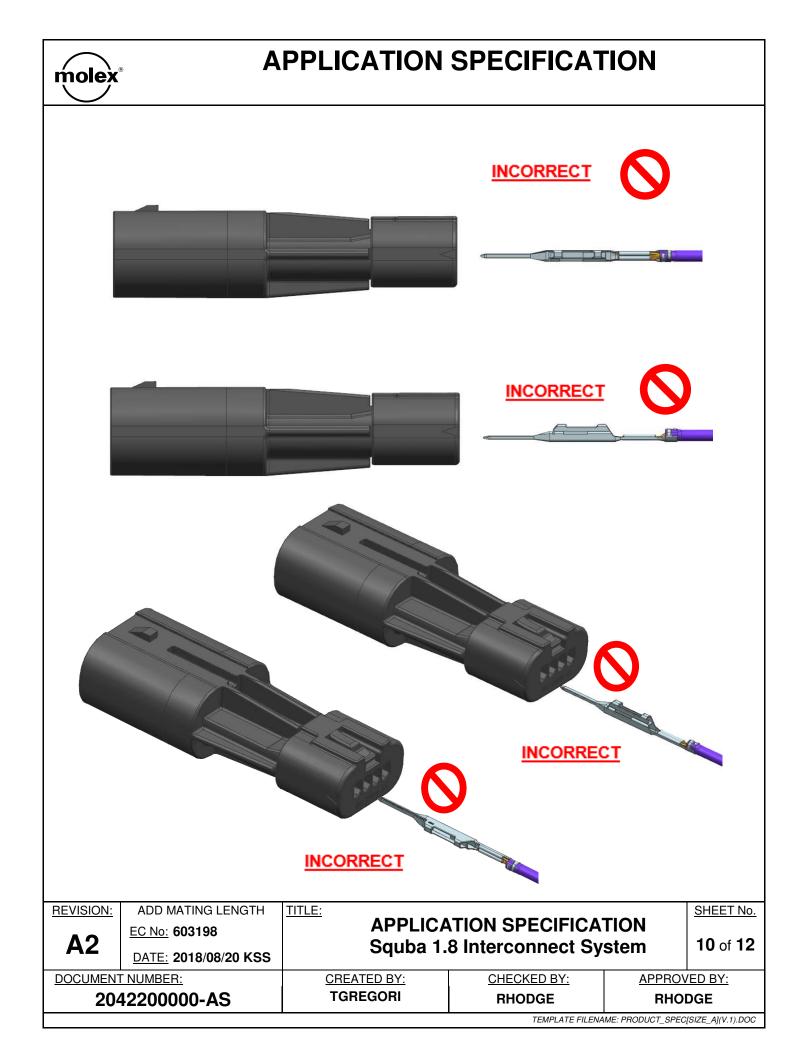

Terminals are to be inserted in the housings as shown below on sheet 5-8. Notice the orientation of the terminal body relative to the receptacle thumb latch and plug thumb latch hook. Notice the orientation of the terminal body relative to the latch hook. Do not force terminals into the housing cavity. The terminal and housing are designed with silicon seals and other features that will provide some light resistance during insertion as well as retention after insertion but if excessive resistance is felt during insertion pull terminal back out and double check that the terminal orientation per sheets 5-8. Terminals are to be inserted until they are fully seated, and audible click is heard. The housing provides a stopping surface, and the housing lock finger provides terminal retention and a light audible click to indicate a fully inserted terminal. You can use the PUSH \rightarrow CLICK \rightarrow PULL method (sheet 10) during terminal insertion to ensure fully seated terminal.

6.0 TERMINAL REMOVAL FROM THE HOUSING

Terminals are NOT intended to be removed from housings to prevent seal damage. Be sure terminals are not damaged and are being inserted into the correct circuit before terminals are inserted.

molex

7.1 CONNECTORS

This product contains a polarization feature to ensure proper orientation during mating. This rib feature is shown below. When mated in the improper orientation this rib feature will not allow the product to be mated.

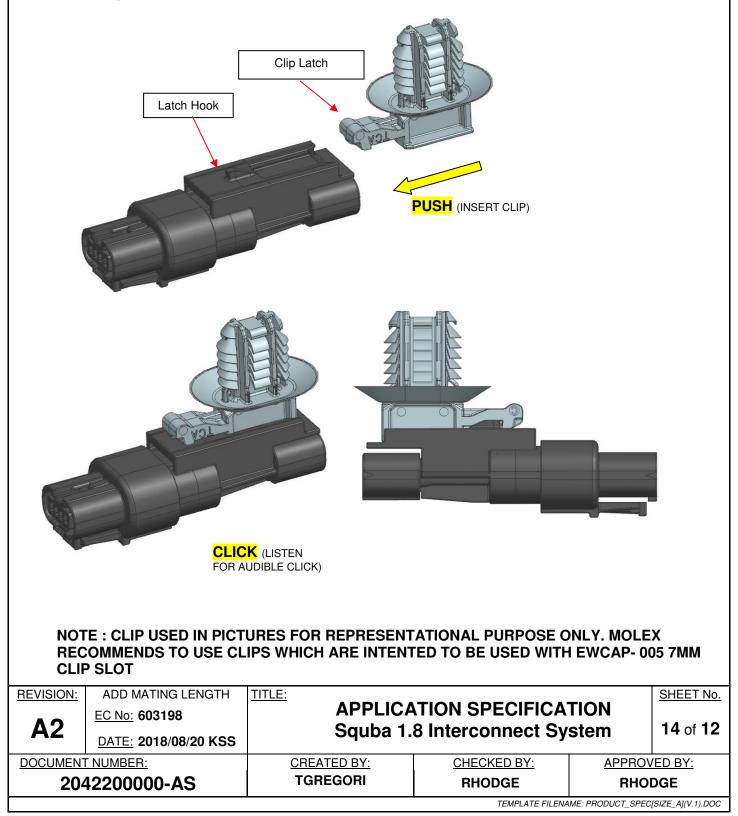

This product also contains a positive locking thumb latch and corresponding latch hook to ensure full mating and prevent accidental un-mating during normal operation. This thumb latch and latch hook features and full mating of the connectors occurs when and after the thumb latch is fully engaged and locked as shown below. A light audible click is heard to indicate fully mated connectors.

7.2 PLUG WITH CLIP SLOT AND CLIP

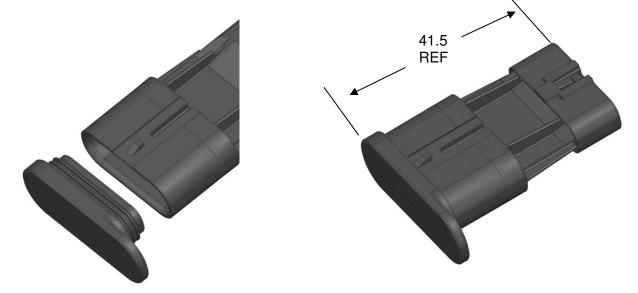

This product contains a Clip slot Feature which is compatible with USCAR-2 Compliant EWCAP-005-7; 7mm Standard Clip slot and Mates with all 7mm Clips intended to mate with interface provided in EWCAP-005 Rev D.

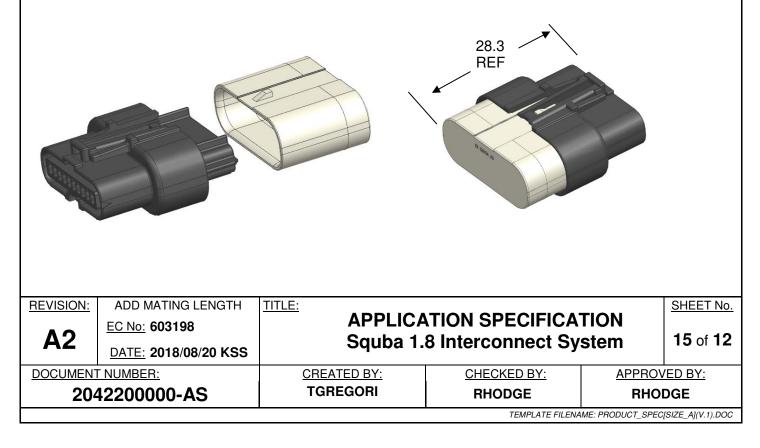

7.3 WEATHER CAPS

Plug Weather Caps are to be inserted in the Plug housings as shown below. Notice the orientation of the Cap with the plug Housing.

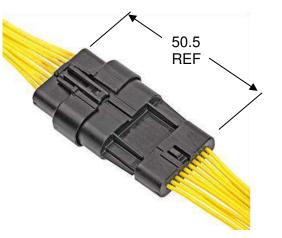

Receptacle weather cap can be mated to receptacle which a positive locking thumb latch and corresponding latch hook to ensure full mating and prevent accidental un-mating during normal operation. This thumb latch and latch hook features and full mating of the assembly occurs when and after the thumb latch is fully engaged and locked as shown below. A light audible click is heard to indicate fully mated.

8.0 MATED LENGTH

9.0 PACKAGING

Parts shall be packaged to protect against damage during handling, transit and storage. See packaging specifications listed in section 3.0 (sheet 2).

10.0 OTHER INFORMATION

10.1 CRIMP APPLICATION TOOLING

10.2 CABLE TIE AND OR WIRE TWIST LOCATION

CKT Size	Dim T Min.	
2-6	50.8 mm (2.00")	
8	76.2 mm (3.00")	
10	101.6 mm (4.00")	

CABLE TIE

← DIM T - → SEE CHART

The "T" dimension defines a "free" length of wire, or a length of wire that is not subject to significant bias by external factors such as a wire tie, wire twisting, or other means of bending or deforming of the wires that repositions them from their natural relaxed state or location where they enter the housing. Wires are to be dressed in such a manner to allow the terminals to float freely in the pocket. This dimension is a general recommendation and may need to be adjusted for different wire gauges and wire type and insulation thickness and insulation material.
