

A300A Air Transducer

Part Number: H2KA300KA1CD00

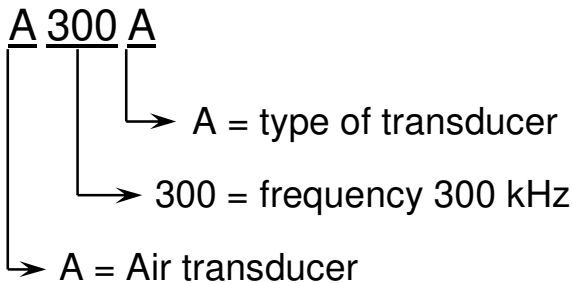

1. Introduction:

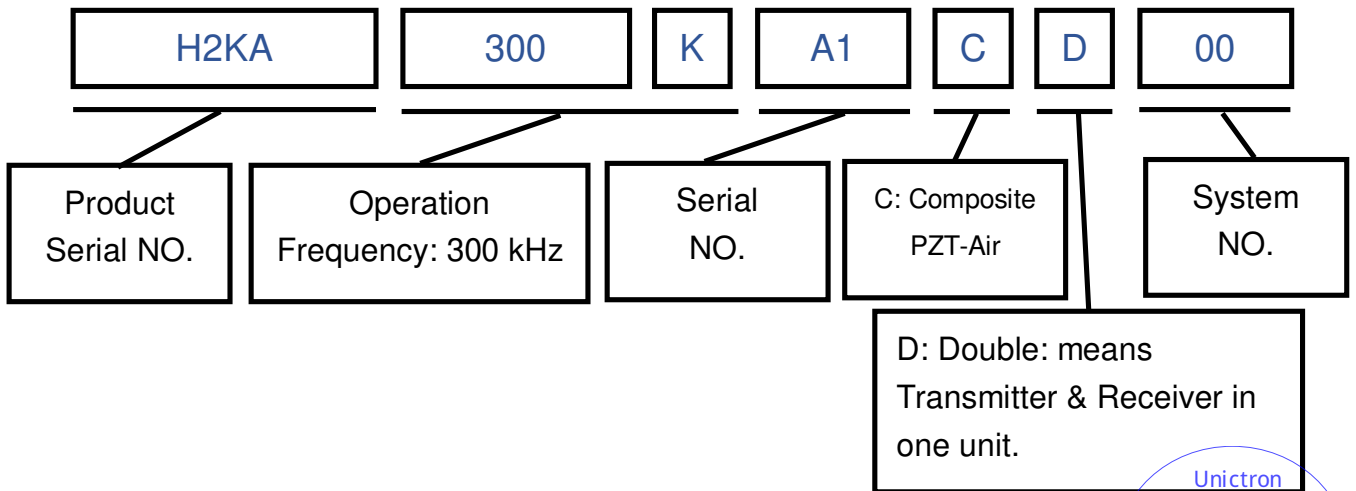

Unictron's A300A ultrasonic transducer is designed to deliver outstanding performance at around 300 kHz frequency. The transducer works as a signal transmitting and receiving unit. This ultrasonic transducer is particularly suitable for double layer detection, edge detection and web guiding, splice detection, label detection and proximity measurement, etc. It will work reliably regardless of materials under detection, for example: paper, glass, transparent plastics, shiny metal, cardboard, etc.

6. Notes and References

6.1 Piezoelectricity

When exposed to high temperature or high voltage, piezoceramic materials may lose its piezoelectric properties due to depolarization.

6.2 Soldering

Please use the soldering tip to mount the transducer onto circuit boards. The temperature of the soldering tip should not exceed 360°C with maximum soldering time of 3 seconds. The transducer is not designed for reflow soldering process. Do not put the transducer in the reflow oven.
