

10.2" Fingerboard Module

LED Light Engine with 64 Nichia LEDs

Specifications Driver Type: Constant-Current 700mA Nominal

Driver Type:	Constant-Current
Drive Current:	700mA Nominal
Nom. Forward Voltages:	22.5V
Total Board Power:	16.7W Nominal
Life:	50,000 Hrs @70% lumen maint., if used as specified (current & heat)
Max Junction Temp:	90°C
Max Test Point Temp:	80°C
Operating Temp:	-40°C to +60°C Ambient
Storage Temp:	-40°C to +80°C
Viewing Angle (FWHM):	120° Lambertian distribution
CBI:	83 typical

- Designed for easy use in standard luminaires
- Tight LED pitch eliminates pixelization
- Color: 1/4 ANSI Binning, 3 Step MacAdam Ellipse
- Suggested Applications: Surface-mount, Recessed or Suspended lighting
- Customizable: Engines can be modified to your application. Contact us.
- Engineered by Norlux
- 5 yr. Warranty

10.2 Inch Fingerboard DC LED Module

Model	Color Temp (K)	Total Current (mA)	Total Board Power (W)	Lumens (± 15%)	Board LPW

Relative Luminous Flux / Tc Temperature

Step Dimming:

This Light Engine can be step-dimmed, with a recommended TRP dimmable driver and SD series step-dimming module. See the SD2 or SD3 data sheet for wiring information.

Compatible TRP Drivers:

These are all compatible with this module. Choose the best driver for your application.

Series/Parallel Configurations

Parallel: The positive and negative of one board is connected to the respective positive and

> negative of the next. Current adds, so the supply must be 2x the current

for 2 boards.

Series: The negative of one board is connected to the positive of the next. Voltage adds, so

the supply must be 2x the voltage

for 2 boards.

Parallel

Series

Maximum Run Lengths

The max number of boards wired in a chain (series) is limited by the max current rating of the first board wired to the driver. The sum of the board currents, in the chain, funnels through the first board. Multiple chains can connect directly to the power supply in parallel. See table for max chain length.

Product	Series/Parallel	Max Allowable Boards		
Product	Series/Parallel	High Current (Nom)	Low Current	
Fingerboard	Series	4	9	

Mounting Notes

The LED assembly is supplied with mounting holes, per the dimensional drawing. It is important to mount the board in such a way as to maintain the To point below the max. The steady state thermals in application will dictate if the board needs to be mounted directly to metallic housing and/or include a thermal pad. For example fully enclosed recessed fixture will require better thermal mounting than an open air pendant.

Thermal Application Notes

This board requires additional heat sinking to run above 70°C ambient at nominal specifications. Heat sink is also required when operated above specified drive currents.

Maximum Current

Max Current: 1440mA

Voltage at max current: 27V, Power at max current: 38.9W

The total maximum current reflects the LED maximum forward current only, without considering thermal needs. Driving the LEDs this hard will likely violate their thermal limits, depending on the application. Tc point must remain at or below the max temperature, or the warranty will be voided. Temperature is directly correlated to LED current.

Static Sensitive Device

Handle only at static-safe work stations.

Packaging

50 per box standard.
