

BA/BB Varistor Series

Agency Approvals

Agency	Agency Approval	Agency File Number	
71 °	UL1449	E320116 - for BA Series only.	

Description

The BA and BB Series transient surge suppressors are heavy-duty industrial Metal-Oxide Varistors (MOVs) designed to provide surge protection for motor controls and power supplies used in oil-drilling, mining, transportation equipment and other heavy industrial AC line applications.

These varistors have similar package construction but differ in size and ratings. The BA models are rated from 130 to $880V_{MIAC)}$. The BB models from 1100 to $2800V_{MIAC)}$.

Both the BA and BB Series feature improved creep and strike capability to minimize breakdown along the package surface, a package design that provides complete electrical isolation of the disc subassembly, and rigid terminals to ensure secure wire contacts.

See BA/BB Series Device Ratings and Specifications Table for part number and brand information.

Features

- High energy absorption capability W_{TM} BA Series 3200J BB Series 10,000J
- Wide operating voltage range V_{M(AC)RMS} BA Series 130V to 880V BB Series 1100V to 2800V
- Rigid terminals for secure wire contact
- Case design provides complete electrical isolation of disc subassembly
- Littelfuse largest packaged disc 60mm diameter
- No derating up to 85°C ambient
- RoHS compliant

Absolute Maximum Ratings

• For ratings of individual members of a series, see Device Ratings and Specifications chart

Continuous	BA Series	BB Series	Units
Steady State Applied Voltage:			
AC Voltage Range (V _{MIACIRMS})	130 to 880	1100 to 2800	V
DC Voltage Range (V _{M(DC)})	175 to 1150	1400 to 3500	V
Transients:			
Peak Pulse Current (I _{TM})			
For 8/20µs Current Wave (See Figure 2)	50,000 to 70,000	70,000	А
Single Pulse Energy Range			
For 2ms Current Squarewave (W _{TM})	450 to 3200	3800 to 10000	J
Operating Ambient Temperature Range (T _A)	-55 to +85	-55 to +85	°C
Storage Temperature Range (T _{STG})	-55 to +125	-55 to +125	°C
Temperature Coefficient (a ^v) of Clamping Voltage (V _c) at Specified Test Current	<0.01	<0.01	%/°C
Hi-Pot Encapsulation (COATING Isolation Voltage Capability) (Dielectric must withstand indicated DC voltage for one minute per MIL-STD-202, Method 301)	5000	5000	V
COATING Insulation Resistance	1000	1000	ΜΩ

CAUTION: Stresses above those listed in "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress only rating and operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied.

Metal-Oxide Varistors (MOVs) Industrial High Energy Terminal Varistors > BA/BB Series

NOTE: Average power dissipation of transients not to exceed 2.5W. See Figures 3 and 4 for more information on power dissipation.

Power Dissipation Ratings

Should transients occur in rapid succession, the average power dissipation required is simply the energy (watt-seconds) per pulse times the number of pulses per second. The power so developed must be within the specifications shown on the Device Ratings and Characteristics Table for the specific device. Furthermore, the operating values need to be derated at high temperatures as shown in the above diagram. Because varistors can only dissipate a relatively small amount of average power they are, therefore, not suitable for repetitive applications that involve substantial amounts of average power dissipation.

Peak Pulse Current Test Waveform

0₁ = Virtual Origin of Wave

T = Time from 10% to 90% of Peak

 $T_1 = Rise Time = 1.25 x T$

 T_2 = Decay Time

Example - For an 8/20 μ s Current Waveform:

 $8\mu s = T_1 = Rise Time$

 $20\mu s = T_2 = Decay Time$

Stand by Power Dissipation vs Applied \mathbf{V}_{Rms} at Varied Temperatures

Typical Stability of Standby Power Dissipation at Rated V_{DMS} vs Time

Maximum Clamping Voltage BA Series

Maximum Clamping Voltage BB Series

Repetitive Surge Capability BA Series

V131BA60 - V321BA60

Repetitive Surge Capability BB Series

V421BA60 - V282BB60

NOTE: If pulse ratings are exceeded, a shift of $V_N(DC)$ (at specified current) of more than +/-10% could result. This type of shift, which normally results in a decrease of $V_N(DC)$, may result in the device not meeting the original published specifications, but it does not prevent the device from continuing to function, and to provide ample protection.

Physical Specifications

Lead Material	BA / BB – Copper with Tin Plating
Insulating Material	Cured, flame retardant epoxy polymer meets UL94V–0 requirements.
Device Labeling	Marked with LF, Part Number and Date code

Environmental Specifications

Operating Temperature	-55°C to +85°C
Storage Temperature	-55°C to +125°C
Humidity Aging	+85°C, 85% RH, 1000 hours +/- 5% typical resistance change
Thermal Shock	+85°C to -40°C 10 times +/- 5% typical resistance change
Solvent Resistance	MIL-STD-202, Method 215
Moisture Sensitivity	Level 1, J-STD-020

Dimensions

Typical weight: BA Series: 250g and BB Series: 600g

Dimensions are in mm; inches in parentheses for reference only.

Part Numbering System

*Refer to Rating & Specifications table

Examples:

130 V_{M(AC)} = 131 2800 V_{M(AC)} = 282
