DESCRIPTION

MP3363 is a fixed frequency converter ideal for low-to-high current Boost applications. The low 0.2V feedback voltage offers higher efficiency in white LED driver applications.

MP3363 regulates the output voltage up to 36V with efficiency as high as 95%. Current-mode regulation and external compensation components allow the MP3363 control loop to be optimized over a wide variety of input voltage.

MP3363 supports analog dimming and PWM dimming on same pin. The <2kHz input dimming frequency is for PWM dimming, >5kHz is for analog dimming.

Soft-start, cycle-by-cycle current limiting, and input under voltage lockout prevent overstressing or damage to sensitive external circuitry at startup and over load current conditions.

The MP3363 is available in a TSOT23-8 package.

ELECTRICAL SPECIFICATIONS

Parameter	Symbol	Value	Units
Input Voltage	V_{IN}	1.8 – 36	V
Output Voltage	VLED	<40	V
LED String		1	string
LED Current	I_{LED}	40	mA

FEATURES

- Input Range of 1.8V to 36V
- 1A Peak Current Limit
- 0.5µA Shutdown Current
- Low 200mV Feedback Voltage
- Programmable Fsw 200kHz-2.2MHz
- Internal 100mΩ 40V Power Switch
- High Efficiency
- Analog and PWM Dimming
- Under Voltage Lockout Protection
- Open/Short LED Protection
- Short FB Protection
- Soft-Start Operation
- Thermal Shutdown
- TSOT23-8 Package

APPLICATIONS

- 2 AA Power Backlighting
- LCD Backlighting
- General Lighting

EVQ3362-J-00A EVALUATION BOARD

(L x W x H) 6.35cm x 6.35cm x 1.0cm

Board Number	MPS IC Number
EV3363-J-00A	MP3363GJ

QUICK START GUIDE

1. Preset DC Power Supply output to 1.8V to 36V and turn off Power Supply.

2. Connect the positive terminal of Power Supply output to the VIN pin and the negative terminal to the GND pin.

3. Connect the LED load between "LED+" (anode of LED string) and "LED-"(cathode of LED string).

4. Turn on Power Supply.

5. Apply the Enable voltage to the EN/DIM pin and drive Enable high to turn on the chip. Apply the PWM signal to then EN/DIM pin for realizing the Dimming function(Fpwm>5kHz for Analog dimming, Fpwm<2kHz for PWM dimming).

EVB TEST RESULTS

**V_{IN}=10V, Load:10LEDs, I_{LED}=80mA, L=4.7uH, Ta=25°C, unless otherwise noted.**

Steady State
V_{IN} = 1.8V, Load: 3LEDs
### Steady State
Load: 6LEDs

V_{IN} Power On

### V_{IN} Power Off

V_{EN} On

V_{EN} Off
EVB TEST RESULTS *(continued)*

**V$_{IN}$=10V, Load:10LEDs, I$_{LED}$=80mA, L=4.7uH, Ta=25°C, unless otherwise noted.**
PWM Power On
F$_{PWM}$ = 10kHz(D=0.5)

PWM Power Off
F$_{PWM}$ = 10kHz(D=0.5)

PWM Dimming
200Hz/D=0.5

PWM Dimming
2kHz/D=0.5

### Analog Dimming
5kHz/D=0.5

OVP When Work Normal

EVB TEST RESULTS *(continued)*

V_{IN}=10V, Load:10LEDs, I_{LED}=80mA, unless otherwise noted.

Short Inductor When Work Normal Then Recover

Short Diode When Work Normal Then Recover
