1. Open Circuit Inductance (OCL) Test Parameters: 100kHz, 0.1Vrms, 0.0A_{dc}, @ +25°C
2. Full Load Inductance (FLL) Test Parameters: 100kHz, 0.1Vrms, @ I_{sat}1, @ +25°C
3. I_{rms}: DC current for an approximate temperature rise of 40°C without core loss. This is for reference only and does not represent absolute maximum ratings. Derating is necessary for AC currents. PCB layout, trace thickness and width, air-flow, and proximity of other heat generating components will affect the temperature rise. It is recommended that the temperature of the part not exceed 125°C under worst case operating conditions verified in the end application.

4. I_{sat}1: Peak current for approximately 20% rolloff @ +25°C
5. I_{sat}2: Peak current for approximately 20% rolloff @ +100°C
6. I_{sat}3: Peak current for approximately 20% rolloff @ +125°C
7. K-factor: Used to determine B_{p-p} for core loss (see graph). B_{p-p} = K * L * ΔI * 10⁻³ B_{p-p}; (Gauss), K: (K-factor from table), L: (Inductance in nH), ΔI (Peak to peak ripple current in Amps).
8. Part Number Definition: FP1108Lx-Rxxx-R
FP1108L = Product code and size
x= Version indicator
Rxxx= inductance value in μH, R= decimal point ,
-R suffix = RoHS compliant
