## 1. Application

This specification applies to the color 15.0 XGA TFT-LCD module LQ150X1LGB1.

- ◎These specification sheets are the proprietary product of SHARP CORPORATION("SHARP) and include materials protected under copyright of SHARP. Do not reproduce or cause any third party to reproduce them in any form or by any means, electronic or mechanical, for any purpose, in whole or in part, without the express written permission of SHARP.
- ◎The device listed in this technical literature was designed and manufactured for use in OA equipment.
- ◎In case of using the device for applications such as control and safety equipment for transportation(aircraft, trains, automobiles, etc. ), rescue and security equipment and various safety related equipment which require higher reliability and safety, take into consideration that appropriate measures such as fail-safe functions and redundant system design should be taken.
- ◎Do not use the device for equipment that requires an extreme level of reliability, such as aerospace applications, telecommunication equipment(trunk lines), nuclear power control equipment and medical or other equipment for life support.
- ◎SHARP assumes no responsibility for any damage resulting from the use of the device which does not comply with the instructions and the precautions specified in these specification sheets.
- ◎Contact and consult with a SHARP sales representative for any questions about this device.

## 2. Overview

This module is a color active matrix LCD module incorporating amorphous silicon TFT (Thin Film Transistor). It is composed of a color TFT-LCD panel, driver ICs, control circuit, power supply circuit and a back light unit. Graphics and texts can be displayed on a 1024×RGB×768 dots panel with about 16 million colors by using LVDS (Low Voltage Differential Signaling) and supplying +3.3V DC supply voltages for TFT-LCD panel driving and supply voltage for backlight.

Backlight-driving DC/AC inverter is not built in this module.

## 3. Mechanical Specifications

Parameter	Specifications	Unit
Display size	38 (Diagonal)	cm

## 【Note1】

On-off sequences of V<sub>CC</sub> and data

$$0 < t1 \leq 10\text{ms}$$

$$0 < t2 \leq 10\text{ms}$$

$$0 < t3 \leq 1\text{s}$$

$$1\text{s} \leq t4$$

$$200\text{ms} \leq t5$$

$$200\text{ms} \leq t6$$

Dip conditions for supply voltage

$$1) V_{th} \leq V_{CC} \leq V_{min}$$

$$t_d \leq 10\text{ms}$$

$$2) V_{CC} < V_{th}$$

V<sub>CC</sub>-dip conditions should also

follow the on-off conditions.

It is recommended to consider some timing difference between LVDS input and Backlight input as shown above.

If the Backlight lights on before LCD starting, or if the Backlight is kept on after LCD stopping, the screen may look white for a moment or abnormal image may be displayed. This is caused by variation in output signal from timing generator at LVDS input on or off. It does not cause the damage to the LCD module.

## 【Note2】 Typical current situation : 253-gray-bar pattern

V<sub>CC</sub>=+3.3V, f<sub>ck</sub>=65MHz, Ta=25°C

Gray scale : GS(n)

$$n=0 \sim 252$$

The explanation of each gray scale, GS(n), is described below section 8.

【Note3】 V<sub>CM</sub> : LVDS Common mode voltage.【Note4】 V<sub>I</sub> : Input voltage to LVDS\_SET.

## 6-2. Backlight

The back light system is an edge-lighting type with four CCFTs (Cold Cathode Fluorescent Tube).  
The characteristics of the lamp are shown in the following table.

The value mentioned below is at the case of one CCFT.

CCFT Model Name : KTBE222MSTF-320MA262-Z (STANLEY ELECTRIC CO., LTD.)

Parameter	Symbol	Min.	Typ.	Max.	Unit	Remark
Lamp current range	$I_L$	3.5	6.0	7.5	mArms	【Note1】
Lamp voltage	$V_L$	—	625	720	Vrms	$T_a=25^{\circ}\text{C}$ , $I_L=6.0\text{mArms}$
Lamp power consumption	$P_L$	—	3.75	4.32	W	【Note2】, $I_L=6.0\text{mArms}$
Lamp frequency	$F_L$	40	60	70	kHz	【Note3】
Kick-off voltage	$V_s$	—	—	1480	Vrms	$T_a=0^{\circ}\text{C}$ 【Note4】
Lamp life time	$T_L$	50,000	—	—	hour	【Note5】

【Note1】 A lamp can be light in the range of lamp current shown above.

Maximum rating for current is measured by high frequency current measurement equipment connected to  $V_{LOW}$  at circuit showed below.

(Note : To keep enough kick-off voltage and necessary steady voltage for CCFT.)

Lamp frequency : 40~70kHz

Ambient temperature : 0~50°C

【Note2】 Referential data per one CCFT by calculation ( $I_L \times V_L$ ).

The data don't include loss at inverter.

【Note3】 Lamp frequency may produce interference with horizontal synchronous frequency, and this may cause beat on the display. Therefore lamp frequency shall be detached as much as possible from the horizontal synchronous frequency and from the harmonics of horizontal synchronous to avoid interference.

【Note4】 This is transformer output voltage at 27pF for the ballast capacitor of a DC-AC inverter.

The kick-off voltage may rise up in the user set, please decide the open output voltage by checking not to occur lighting failure under operating state.

The open output voltage should be applied to the lamp for more than 1 second to startup. Otherwise the lamp may not be turned on.

\* 2pin  $V_{LOW}$

【Note5】 Above value is applicable when lamp (the long side of LCD module) is placed horizontally.

(Landscape position)

Lamp life time is defined as the time when either ① or ② occurs in the continuous operation under the condition of  $T_a=25^{\circ}\text{C}$  and  $I_L=6.0\text{mA rms}$ .

① Brightness becomes 50% of the original value under standard condition.

② Kick-off voltage at  $T_a=0^{\circ}\text{C}$  exceeds 1480  $V_{rms}$  value.

(Lamp lifetime may vary if lamp is in portrait position due to the change of mercury density inside the lamp.)

## 《Note》

The performance of the backlight, for example lifetime or brightness, is much influenced by the characteristics of the DC-AC inverter for the lamp. When you design or order the inverter, please make sure that a poor lighting caused by the mismatch of the backlight and the inverter (miss-lighting, flicker, etc.) never occurs. When you confirm it, the module should be operated in the same condition as it is installed in your instrument.

Use the lamp inverter power source incorporating such safeguard as overvoltage / overcurrent protective circuit or lamp voltage waveform detection circuit, which should have individual control of each lamp.

In case one circuit without such individual control is connected to more than two lamps, excessive current may flow into one lamp when the other one is not in operation.

Under the environment of 10lx or less, miss-lighting or lighting delay may occur.

0 : Low level voltage,            1 : High level voltage.

Each basic color can be displayed in 64 gray scales from 6 bit data signals. According to the combination of total 18 bit data signals, the 262,144-color display can be achieved on the screen.

※The measurement shall be executed 30 minutes after lighting at rating.

The optical characteristics shall be measured in a dark room or equivalent state with the method shown in Fig.2 below.

Fig2-1 Viewing angle measurement method

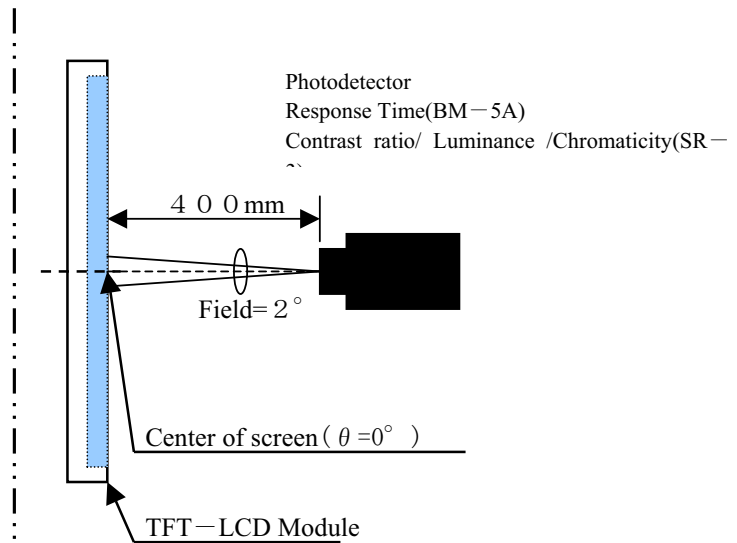

Fig2-2 Luminance/Contrast ratio/Response time/Chromaticity measurement method

Fig2 Optical characteristics measurement method

【Note1】 Definitions of viewing angle range:

【Note2】 Definition of contrast ratio:

The contrast ratio is defined as the following.

$$\text{Contrast Ratio (CR)} = \frac{\text{Luminance (brightness) with all pixels white}}{\text{Luminance (brightness) with all pixels black}}$$

【Note3】 Definition of response time:

The response time is defined as the following figure and shall be measured by switching the input signal for "black" and "white".

【Note4】 This shall be measured at center of the screen.

**【Note5】 Definition of white uniformity:**

White uniformity is defined as the following with five measurements (A~E).

$$\delta_w = \frac{\text{Maximum Luminance of five points (brightness)}}{\text{Minimum Luminance of five points (brightness)}}$$

#### 10. Handling Precautions

- a) Be sure to turn off the power supply when inserting or disconnecting the cable.
- b) Be sure to design the cabinet so that the module can be installed without any extra stress such as warp or twist.
- c) Since the front polarize is easily damaged, pay attention not to scratch it.
- d) Since long contact with water may cause discoloration or spots, wipe off water drop immediately.
- e) When the panel surface is soiled, wipe it with absorbent cotton or other soft cloth.
- f) Since the panel is made of glass, it may break or crack if dropped or bumped on hard surface. Handle with care.
- g) Since CMOS LSI is used in this module, take care of static electricity and take the human earth into consideration when handling.
- h) Make sure the four mounting holes of the module are grounded sufficiently. Take electro-magnetic interference (EMI) into consideration.
- i) The module has some printed circuit boards (PCBs) on the back side. Take care to keep them from any stress or pressure when handling or installing the module; otherwise some of electronic parts on the PCBs may be damaged.
- j) Observe all other precautionary requirements in handling components.
- k) Since it is necessary to remove the screw on the back of a module before performing lamp exchange, please take a cabinet design into consideration.
- l) When some pressure is added onto the module from rear side constantly, it causes display non-uniformity issue, functional defect, etc. So, please avoid such design.
- m) When handling LCD modules and assembling them into cabinets, please be noted that long-term storage in the environment of oxidization or deoxidization gas and the use of such materials as reagent, solvent, adhesive, resin, etc. which generate these gasses, may cause corrosion and discoloration of the LCD modules.

## 11. Packing form

- a) Piling number of cartons : maximum 5 cartons
- b) Packing quantity in one carton : 5 module
- c) Carton size : 319mm(W) × 402mm(D) × 280mm(H)
- d) Total mass of one carton filled with full modules : 8.0kg.Max
- e) Packing form is shown in Fig.3

## 12. Reliability test items

No	Test item	Conditions	
1	High temperature storage test	Ta = 70°C 240H	
2	Low temperature storage test	Ta = -30°C 240H	
3	High temperature & high humidity operation test	Ta = 40°C , 95%RH 240H (No condensation)	
4	High temperature operation test	Tp = 60°C 240H (Tp: The temperature of panel surface)	
5	Low temperature operation test	Tp = 0°C 240H	
6	Vibration test	Waveform : Sine wave Frequency : 10~57Hz/Vibration width (one side) : 0.075mm : 58~500Hz/Gravity : 9.8m/s <sup>2</sup> Sweep time : 11minutes Test period : 3 hours (1 hour for each direction of X,Y,Z)	<b>【Note】</b>
7	Shock test	Max. gravity : 490m/s <sup>2</sup> Pulse width : 11ms, sine wave Direction : ±X, ±Y, ±Z, once for each direction.	<b>【Note】</b>
8	Thermal shock test (non- operating)	Ta=-30°C~70°C ; 5 cycles Test period : 10 hours (1 hour for each temperature)	
9	Altitude	Ta=50°C,70kPa,3,048m(10,000ft), t=24H (Operating) Ta=70°C,12kPa,15,240m(50,000ft), t=24H (Storage)	
10	ESD test	Contact discharge (150pF 330Ω) non-operating = ±10kV, operating = ±8kV Atmospheric discharge (150pF 330Ω) non-operating = ±20kV, operating = ±15kV	
11	EMI	Measurement in 10m site Display position on the screen = "H" (full-screen), GND to 4 place = un-connect, Vcc / Vsignal = typ.	VCCI (Class B)

**【Note】**

A gap of panel shall not occur by vibration or the shock.

**【Result Evaluation Criteria】**

Under the display quality test conditions with normal operation state, these shall be no change which may affect practical display function.

3) Adjusting volume have been set optimally before shipment, so do not change any adjusted value.

If adjusted value is changed, the specification may not be satisfied.

4) Disassembling the module can cause permanent damage and should be strictly avoided.

5) Please be careful since image retention may occur when a fixed pattern is displayed for a long time.

6) The chemical compound which causes the destruction of ozone layer is not being used.

7) Warning of mercury and material information of LPG (Light Pipe Guide) are labeled on the back of the module.

10) When any question or issue occurs, it shall be solved by mutual discussion.

## 14. Carton storage condition

Temperature	0°C to 40°C
Humidity	95%RH or less
Reference condition :	20°C to 35°C , 85%RH or less (summer) : 5°C to 15°C , 85%RH or less (winter) • the total storage time (40°C,95%RH) : 240H or less
Sunlight	Be sure to shelter a product from the direct sunlight.
Atmosphere	Harmful gas, such as acid and alkali which bites electronic components and/or wires must not be detected.
Notes	Be sure to put cartons on palette or base, don't put it on floor, and store them with removing from wall Please take care of ventilation in storehouse and around cartons, and control changing temperature is within limits of natural environment
Storage period	1 year

Observe the following points when using any device in this publication. SHARP takes no responsibility for damage caused by improper use *of the devices*.

The appropriate design measures should be taken to ensure reliability and safety when SHARP's devices are used for equipment such as:

- Transportation control and safety equipment (i.e., aircraft, trains, automobiles, etc.)
- Traffic signals
- Alarm equipment
- Gas leakage sensor breakers
- Various safety devices etc.

SHARP's devices shall not be used for equipment that requires extremely high level of reliability, such as:

- Military and space applications
- Medical equipment for life support
- Nuclear power control equipment
