

# DELKIN DEVICES®

## COEM CFexpress Engineering Specification

Document Number: 401-0546-00

Revision: A

# Product Overview

- **Capacities**
  - 128GB & 256GB
- **Form Factor**
  - CFEXPRESS
- **PCIe Interface**
  - NVMe PCIe Gen 3 x 2
- **Compliance**
  - NVMe 1.3
  - PCI Express Base 3.1
- **Performance<sup>1</sup>**
  - Read: up to 1700 MB/s
  - Write: up to 1100 MB/s
- **Reliability**
  - Mean Time Between Failure (MTBF)  
More than 1.5 million hours
  - Uncorrectable Bit Error Rate (UBER) < 1  
sector per 10<sup>16</sup> bits read
- **Advanced Flash Management**
  - Static and Dynamic Wear Leveling
  - Bad Block Management
  - TRIM
  - SMART
  - Over-Provisioning
  - Firmware Update Capability
- **Power Management**
  - Support APST
  - Support ASPM
  - Support L1.2
- **Power Consumption<sup>2</sup>**
  - See table 4.2
- **Temperature Range<sup>3</sup>**
  - Operation: 0°C ~ 70°C
  - Storage: -40°C ~ 85°C
- **RoHS-Compliant**
- **Features Support List:**
  - End to end data path protection
  - Thermal throttling
  - LDPC + RAID ECC
  - SmartRefresh™
  - Drive log
  - Support of TCG OPAL<sup>4</sup>
  - Support of TCG Pyrite<sup>5</sup>

## NOTES:

1. Refer to Chapter 2 Section 1.1 for more details
2. Refer to Chapter 4, Section 4.2 Power Consumption for more details.
3. The operation temperature means the case temperature, in which can be decided via the S.M.A.R.T.
4. Supported by a separate firmware version. Further information available upon request.
5. Supported by a separate firmware version. Further information available upon request.

## 1. INTRODUCTION

### 1.1. General Description

Delkin's CFexpress delivers all the advantages of flash disk technology with PCIe Gen3 x 2 interface. The CFexpress is available in the capacity range of 128GB & 256GB and can reach up to 1770 MB/s read, as well as 1100 MB/s write high performance. Its lower power consumption makes it an ideal storage choice for high performance embedded platforms.

### 1.2. Product Block Diagram

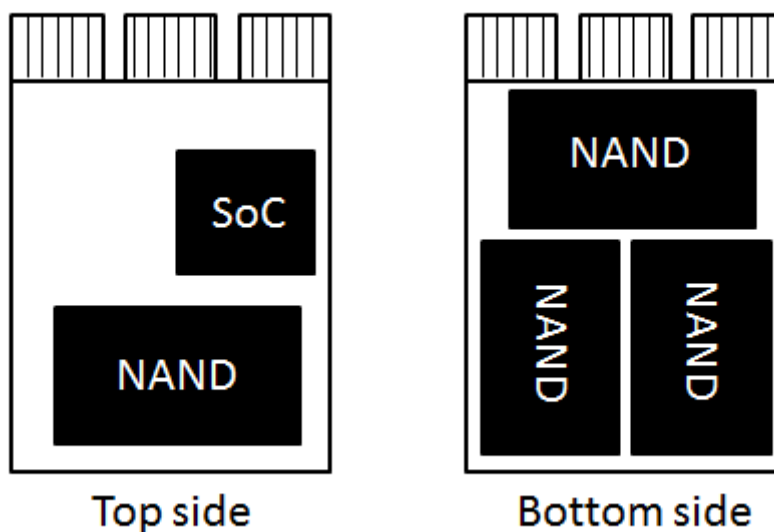

Figure 1-1 CFexpress Product Block Diagram

### 1.3. Flash Management

#### 1.3.1. Error Correction Code (ECC)

Flash memory cells will deteriorate with use, which might generate random bit errors in the stored data. However, Delkin's CFexpress PCIe SSD applies the LDPC (Low Density Parity Check) and RAID ECC algorithm,, which can detect and correct data errors to ensure data being read correctly, and protects data from corruption.

### **1.3.2. Wear Leveling**

NAND flash devices can only undergo a limited number of program/erase cycles, when flash media is not used evenly, some blocks get updated more frequently than others and the lifetime of device would be reduced significantly. Thus, wear leveling is applied to extend the lifespan of NAND flash by evenly distributing write and erase cycles across the media.

Delkin provides advanced wear leveling algorithms, which can efficiently spread out the flash usage through the whole flash media area. Moreover, by implementing both dynamic and static wear leveling algorithms, the life expectancy of the NAND flash is greatly improved.

### **1.3.3. Bad Block Management**

Bad blocks are blocks that do not function properly or contain more invalid bits causing stored data unstable, and their reliability is not guaranteed. Blocks that are identified and marked as bad by the manufacturer are referred to as “Initial Bad Blocks”. Bad blocks that are developed during the lifespan of the flash are named “Later Bad Blocks”. Delkin implements an efficient bad block management algorithm to detect the factory-produced bad blocks and manages bad blocks that appear with use. This practice prevents data being stored into bad blocks and further improves the data reliability.

### **1.3.4. TRIM**

TRIM is a feature which helps improve the read/write performance and speed of solid state drives (SSD). Unlike hard disk drives (HDD), SSDs are not able to overwrite existing data, so the available space gradually becomes smaller with each use. With the TRIM command, the operating system can inform the SSD so that blocks of data that are no longer in use can be removed permanently. Thus, the SSD will perform the erase action, which prevents unused data from occupying blocks at all time.

### **1.3.5. SMART**

SMART, an acronym for Self-Monitoring, Analysis and Reporting Technology, is an open standard that allows a solid state drive to automatically detect its health and report potential failures. When a failure is recorded by SMART, users can choose to replace the drive to prevent unexpected outage or data loss. Moreover, SMART can inform users impending failures while there is still time to perform proactive actions, such as save data to another device.

### **1.3.6. Over-Provisioning**

Over Provisioning refers to the inclusion of extra NAND capacity in a SSD, which is not visible to users nor usable by users. Therefore, it allows a SSD controller to utilize additional space for better performance and WAF. With Over Provisioning, the performance and IOPS (Input/Output Operations per Second) are improved by providing the controller additional space to manage P/E cycles, which enhances the reliability and endurance as well. Moreover, the write amplification of the SSD becomes lower when the controller writes data to the flash.

### **1.3.7. Firmware Upgrade**

Firmware can be considered as a set of instructions on how the device communicates with the host. Firmware can be upgraded when new features are added, compatibility issues are fixed, or read/write performance gets improved.

### **1.3.8. Thermal Throttling**

The purpose of thermal throttling is to prevent components in a SSD from over-heating during read and write operations. Delkin's CFexpress is designed with an on-die thermal sensor and with its accuracy, firmware can apply different levels of throttling to achieve the purpose of protection efficiently and proactively via SMART reading.

## **1.4. Advanced Device Security Features**

### **1.4.1. Secure Erase**

Secure Erase is a standard NVMe format command and will write all "0xFF" to all cells, to fully wipe all the data on hard drives and SSDs. When this command is issued, SSD controller will erase its storage blocks and return to its factory default settings.

### **1.4.2. Crypto Erase**

Crypto Erase is a feature that erases all data of an OPAL-activated SSD or a "SED" (Security-Enabled Disk) drive by resetting the cryptographic key of the disk. Since the key is modified, the previously encrypted data will become useless, achieving the purpose of data security.

### 1.4.3. Physical Presence SID (PSID)

Physical Presence SID (PSID) is defined by TCG OPAL as a 32-character string and the purpose is to revert SSD back to its manufacturing setting when the drive is still OPAL-activated. PSID code can be printed on a SSD label when an OPAL-activated SSD supports PSID revert feature.

## 1.5. SSD Lifetime Management

### 1.5.1. Terabytes Written (TBW)

TBW (Terabytes Written) is a measurement of SSDs' expected lifespan, which represents the amount of data written to the device. To calculate the TBW of a SSD, the following equation is applied:

$$TBW = [(NAND\ Endurance) \times (SSD\ Capacity)] / [WAF]$$

NAND Endurance: NAND endurance refers to the P/E (Program/Erase) cycle rating of a NAND flash, per the manufacturer's specification.

SSD Capacity: The SSD capacity is the specific capacity in total of a SSD.

WAF: Write Amplification Factor (WAF) is a numerical value representing the ratio between the amount of data that a SSD controller writes to the flash and the amount of data that the host's flash controller writes. A better WAF, which is near 1, guarantees better endurance and lower frequency of data written to flash memory.

TBW in this document is based on JEDEC 218/219 workload.

### 1.5.2. Media Wear Indicator

Actual life indicator reported by SMART Attribute byte index [5], Percentage Used, recommends User to replace drive when reaching to 100%.

### 1.5.3. Read Only Mode (End of Life)

When a drive is aged by accumulated program/erase cycles, media worn-out may cause increasing numbers of later bad blocks. When the number of usable good blocks falls outside a defined usable range, the drive will notify the Host through AER event and Critical Warning to enter Read Only Mode to prevent further data corruption. This acts as notice to the user to replace the drive with another one immediately.

## 1.6. Adaptive Approach to Performance Tuning

### 1.6.1. Throughput

Based on the available space of the disk, Delkin's SSD will regulate the read/write speed and manage the throughput performance. When significant free space remains, the firmware will continuously perform read/write action. At this stage, there is still no need to implement garbage collection to allocate and release memory, which will accelerate the read/write process to improve the performance. However, when the free space is used up, the controller will slow down the read/write processing and implement garbage collection to release memory. Hence, read/write performance will become slower.

### 1.6.2. Predict & Fetch

Normally, when the Host tries to read data from the PCIe SSD, the PCIe SSD will only perform one read action after receiving one command. However, Delkin's controller applies **Predict & Fetch** to improve the read speed. When the host issues sequential read commands to the PCIe SSD, the PCIe SSD will automatically expect that the following will also be read commands. Thus, before receiving the next command, flash has already prepared the data. Accordingly, this accelerates the data processing time, and the host does not need to wait so long to receive data.

### 1.6.3. SLC Caching

Delkin's controller firmware design currently adopts dynamic caching to deliver better performance for better endurance and consumer user experience.

## 2. PRODUCT SPECIFICATIONS

- **Capacity**
  - 128GB & 256GB
  - Supports 32-bit addressing mode
- **Electrical/Physical Interface**
  - PCIe Interface
  - Compliant with NVMe 1.3
  - PCIe Express Base Ver 3.1
  - PCIe Gen 3 x 2 lane & backward compatible to PCIe Gen 2 and Gen 1
  - Support up to QD 128 with queue depth of up to 64K
  - Support power management
- **ECC Scheme**
  - Delkin CFexpress applies the LDPC (Low Density Parity Check) and RAID ECC algorithm
- **Sector Size Support**
  - 512B
  - 4KB
- **UART/ GPIO**
- **Supports SMART and TRIM commands**
- **LBA Range**
  - IDEMA standard

### 1.1. Performance

Capacity	Sequential (CDM)		Random (8GB Burst)	
	Read (MB/s)	Write (MB/s)	Read (KIOPS)	Write (KIOPS)
128GB	1550	1000	70K	120K
256GB	1700	1100	150K	250K

#### NOTES:

- Performance may differ according to flash configuration and platform.
- Performance is measured with the following conditions
  - CrystalDiskMark 6.0, 1GB range, QD=32T1
  - IOMeter, 1GB range, 4K data size, QD=32T8
  - ATTO, transfer Size 64MB
- OS Version: Win10 (64bit), version 1709

#### • Part Numbers

Capacity	Operating Temperature
	Commercial (0 to 70 °C)
128GB	CFXCOEM-128GB
256GB	CFXCOEM-256GB

### 3. ENVIRONMENTAL SPECIFICATIONS

#### 3.1. Environmental Conditions

##### 3.1.1. Temperature and Humidity

Table 3-1 High Temperature

	Temperature	Humidity
Operation	70°C	0% RH
Storage	85°C	0% RH

Table 3-2 Low Temperature

	Temperature	Humidity
Operation	0°C	0% RH
Storage	-40°C	0% RH

Table 3-3 High Humidity

	Temperature	Humidity
Operation	40°C	90% RH
Storage	40°C	93% RH

Table 3-4 Temperature Cycling

	Temperature
Operation	0°C
	70°C <sup>1</sup>
Storage	-40°C
	85°C

NOTES:

1. Operation temperature is measured by device temperature sensor. Airflow is suggested and it will allow device to be operated in at appropriate temperature for each component during heavy workload environments.

**3.1.2. Shock****Table 3-5 Shock**

	Acceleration Force
<b>Non-operational</b>	1500G

**3.1.3. Vibration****Table 3-6 Vibration**

	Condition	
	Frequency/Displacement	Frequency/Acceleration
<b>Non-operational</b>	20Hz~80Hz/1.52mm	80Hz~2000Hz/20G

**3.1.4. Drop****Table 3-7 Drop**

	Height of Drop	Number of Drop
<b>Non-operational</b>	80cm free fall	6 face of each unit

**3.1.5. Bending****Table 3-8 Bending**

	Force	Action
<b>Non-operational</b>	≥ 20N	Hold 1min/5 times

**3.1.6. Torque****Table 3-9 Torque**

	Force	Action
<b>Non-operational</b>	0.5N-m or ±2.5 deg	Hold 1min/5 times

### 3.1.7. Electrostatic Discharge (ESD)

Table 3-10 ESD

Specification	+/- 4KV
EN 55024, CISPR 24 EN 61000-4-2 and IEC 61000-4-2	Device functions are affected, but EUT will be back to its normal or operational state automatically.

### 3.1.8. EMI Compliance

Table 3-11 EMI

Specification
EN 55032, CISPR 32(CE) AS/NZS CISPR 32(CE) ANSI C63.4 (FCC) VCCI-CISPR 32 (VCCI) CNS 13438 (BSMI)

## 3.2. MTBF

MTBF, Mean Time Between Failures, is a measure of a device's reliability. Its value represents the average time between a repair and the next failure. The unit of MTBF is in hours. The higher the MTBF value, the higher the reliability of the device. The predicted result of Delkin's CFexpress is more than 1.5 million hours at 0°C.

Our MTBF result is based on Telcordia methodology. Please note that a lower MTBF should be expected for higher capacity drives, and we apply the lowest MTBF for all capacities.

## 3.3. Certification & Compliance

- RoHS
- WHQL
- PCI Express Base 3.1
- UNH-IOL NVM Express Logo

## 4. ELECTRICAL SPECIFICATIONS

### 4.1. Supply Voltage

**Table 4-1 Supply Voltage**

Parameter	Rating
Operating Voltage	Min = 3.14V Max = 3.47 V
Rise Time (Max/Min)	100 ms / 0.1 ms
Fall Time (Max/Min)	5s / 1 ms
Min. Off Time <sup>1</sup>	1s

NOTE:

1. Minimum time between power removed from SSD ( $V_{cc} < 100$  mW) and power re-applied to the drive.

### 4.2. Power Consumption

**Table 4-2 Power Consumption in mW**

Capacity	Read (Max)	Write (Max)	Read (Avg.)	Write (Avg.)
128GB	2310	1600	2290	1550
256GB	2470	2320	2450	2260

NOTES:

1. Based on ambient temperature.
2. Use CrystalDiskMark 6.0 with the setting of 1000MB. Sequentially read and write the disk for 5 times, and measure power consumption during sequential Read [1/5]~[5/5] or sequential Write [1/5]~[5/5]
3. Power Consumption may differ according to flash configuration and platform.
4. The measured power voltage is 3.3V.

**Table 4-3 Power Consumption in mW**

Capacity	Seq. Write			PS3	PS4
	PS0	PS1	PS2		
128GB	1550	1250	1140	30	5
256GB	2260	1380	1200	30	5

**NOTES:**

1. Based on ambient temperature.
2. The average value of power consumption is achieved based on 100% conversion efficiency.
3. The measured power voltage is 3.3V.
4. The temperature of a storage device in PS1 should remain constant or should slightly decrease for all workloads so the actual power in PS1 should be lower than PS0.
5. The temperature of a storage device in PS2 should decrease sharply for all workloads so the actual power in PS2 should be lower than PS1.

Power Save Modes - PS0 Default Operational, PS1 Light Throttle, PS2 Heavy Throttle, PS3 Non-operational with fast recover, PS4 Lowest non-zero power state.

## 5. INTERFACE

### 5.1. Pin Assignment and Descriptions

Table 5-1 lists the pin assignment of the media.

The I/O column indicates the signal direction viewed from the media: “I” indicates the signal input to the media and “O” indicates the signal output from the media. In the Connection column, “R” indicates the signal is required, “Opt” indicates the signal is optional, and “NC” indicates the signal shall not be connected.

**Table 5-1 Pin Assignment and Description of CFexpress**

Pin No.	Signal	I/O	Media	Host	Notes
21	GND		R	R	
20	PETp0	I	R	R	
19	PETn0	I	R	R	
18	GND		R	R	
17	PERp0	O	R	R	
16	PERn0	O	R	R	
15	GND		R	R	
14	REFCLK+	I	R	R	
13	REFCLK-	I	R	R	
12	INS#	O	R	R	1
11	CLKREQ#	O	R	Opt	2
10	+3.3V		R	R	
9	PERST#	I	R	R	
8	Reserved		NC	NC	
7	Reserved		NC	NC	4
6	PETp1	I	Opt	Opt	
5	PETn1	I	Opt	Opt	
4	GND		R	Opt	3
3	PERp1	O	Opt	Opt	
2	PERn1	O	Opt	Opt	
1	GND		R	R	

1. A host pull-up resistor in the range of 100kΩ-200kΩ is required on this pin.
2. A host pull-up resistor (≥5kΩ) is required on this pin.
3. If the PCI Express Transmitter differential pair Lane 1 and Receiver differential pair Lane 1 are implemented, this pin shall be connected to ground.
4. Note that this pin is assigned to USBEN in XQD specification.

**Table 5-2 Signal / Pin Descriptions of CFexpress**

Category	Signal Name	Description
PCI Express	PETp0	PCI Express 8 GT/s two Lane. 2 transmitter differential pairs and 2 receiver differential pairs.
	PETn0	
	PERp0	
	PERn0	
	PETp1	
	PETn1	
	PERp1	
	PERn1	
Auxiliary	REFCLK+ REFCLK-	PCI Express differential (and spread-spectrum) reference clock.
	PERST#	PCI Express functional reset.
	INS#	This signal is used for media detection and power control.
	CLKREQ#	This signal is used to indicate when REFCLK is needed for the PCI Express interface.
Power Source	+3.3V	3.3V power
Ground	GND	Ground

## 6. SUPPORTED COMMANDS

### 6.1. NVMe Command List

**Table 6-1 Admin Commands**

Opcode	Command Description
00h	Delete I/O Submission Queue
01h	Create I/O Submission Queue
02h	Get Log Page
04h	Delete I/O Completion Queue
05h	Create I/O Completion Queue
06h	Identify
08h	Abort
09h	Set Features
0Ah	Get Features
0Ch	Asynchronous Event Request
10h	Firmware Activate
11h	Firmware Image Download

**Table 6-2 Admin Commands – NVM Command Set Specific**

Opcode	Command Description
80h	Format NVM
81h	Security Send
82h	Security Receive

**Table 6-3 NVM Commands**

Opcode	Command Description
00h	Flush
01h	Write
02h	Read
04h	Write Uncorrectable
08h	Write Zeroes
09h	Dataset Management

## 6.2. Identify Device Data

The following table details the sector data returned by the IDENTIFY DEVICE command.

**Table 6-4 Identify Controller Data Structure**

Bytes	O/M	Description	Default Value
01:00	M	PCI Vendor ID (VID)	0x1E33
03:02	M	PCI Subsystem Vendor ID (SSVID)	0x1E33
23:04	M	Serial Number (SN)	SN
63:24	M	Model Number (MN)	Model Number
71:64	M	Firmware Revision (FR)	FW Name
72	M	Recommended Arbitration Burst (RAB)	0x01
75:73	M	IEEE OUI Identifier (IEEE)	0x000000
76	O	Controller Multi-Path I/O and Namespace Sharing Capabilities (CMIC)	0x00
77	M	Maximum Data Transfer Size (MDTS)	0x09
79:78	M	Controller ID (CNTLID)	0x0000
83:80	M	Version (VER)	0x00010300
87:84	M	RTD3 Resume Latency (RTD3R)	TBD
91:88	M	RTD3 Entry Latency (RTD3E)	TBD
95:92	M	Optional Asynchronous Events Supported (OAES)	0x00000100
99:96	M	Controller Attributes (CTRATT)	0x00000002
111:100		Reserved	0x00
127:112		FRU Globally Unique Identifier (FGUID)	0x00
239:128	-	Reserved	0x00
255:240	-	Refer to the NVMe Management Interface Specification for definition	0
257:256	M	Optional Admin Command Support (OACS)	0x0017
258	M	Abort Command Limit (ACL)	0x00
259	M	Asynchronous Event Request Limit (AERL)	0x03
260	M	Firmware Updates (FRMW)	0x12 (TBD)
261	M	Log Page Attributes (LPA)	0x06
262	M	Error Log Page Entries (ELPE)	0x0F
263	M	Number of Power States Support (NPSS)	0x04
264	M	Admin Vendor Specific Command Configuration (AVSCC)	0x01
265	O	Autonomous Power State Transition Attributes (APSTA)	0x01
267:266	M	Warning Composite Temperature Threshold (WCTEMP)	(TBD)
269:268	M	Critical Composite Temperature Threshold (CCTEMP)	(TBD)
271:270	O	Maximum Time for Firmware Activation (MTFA)	0x0000

275:272	O	Host Memory Buffer Preferred Size (HMPRE)	(TBD)
279:276	O	Host Memory Buffer Minimum Size (HMMIN)	(TBD)
295:280	O	Total NVM Capacity (TNVMCAP)	non-zero
311:296	O	Unallocated NVM Capacity (UNVMCAP)	0
315:312	O	Replay Protected Memory Block Support (RPMBS)	(TBD)
317:316	O	Extended Device Self test Time (EDSTT)	0x001E
318	O	Device Self test Options (DSTO)	0x01
319	M	Firmware Update Granularity (FWUG)	0x1
321:320	M	Keep Alive Support (KAS)	0x0001
323:322	O	Host Controlled Thermal Management Attributes (HCTMA)	1
325:324	O	Minimum Thermal Management Temperature (MNTMT)	(TBD)
327:326	O	Maximum Thermal Management Temperature (MXTMT)	(TBD)
331:328	O	Sanitize Capabilities (SANICAP)	0x00000006
511:316	-	Reserved	0x0
<b>NVM Command Set Attributes</b>

187:184	LBA Format 14 Support (LBAF14)
191:188	LBA Format 15 Support (LBAF15)
383:192	Reserved
4095:384	Vendor Specific (VS)

**Table 6-6 List of Identify Namespace Data Structure for Each Capacity**

<b>Capacity (GB)</b>	<b>Byte[7:0]: Namespace Size (NSZE)</b>
128	EE7C2B0
256	1DCF32B0

### 6.3. SMART Attributes

**Table 6-7 SMART Attributes (Log Identifier 02h)**

Bytes Index	Bytes	Description
[0]	1	Critical Warning
[2:1]	2	Composite Temperature
[3]	1	Available Spare
[4]	1	Available Spare Threshold
[5]	1	Percentage Used
[31:6]	26	Reserved
[47:32]	16	Data Units Read
[63:48]	16	Data Units Written
[79:64]	16	Host Read Commands
[95:80]	16	Host Write Commands
[111:96]	16	Controller Busy Time
[127:112]	16	Power Cycles
[143:128]	16	Power On Hours
[159:144]	16	Unsafe Shutdowns
[175:160]	16	Media and Data Integrity Errors
[191:176]	16	Number of Error Information Log Entries
[195:192]	4	Warning Composite Temperature Time
[199:196]	4	Critical Composite Temperature Time
[201:200]	2	Temperature Sensor 1
[203:202]	2	Temperature Sensor 2
[205:204]	2	Temperature Sensor 3
[207:206]	2	Temperature Sensor 4

## 7. PHYSICAL DIMENSION

CFexpress : 38.50mm (L) x 29.60mm (W) x 3.8mm (H)

**WARNING:** This product may contain chemicals known to the State of California to cause cancer, birth defects, or other reproductive harm. For more information go to [www.p65warnings.ca.gov](http://www.p65warnings.ca.gov).
