## Item description

The PFC200 Controller is a compact PLC for the modular WAGO I/O System. Besides network and fieldbus interfaces, the controller supports all digital, analog and specialty modules found within the 750/753 Series.

Two ETHERNET interfaces and an integrated switch enable line topology wiring.

An integrated Webserver provides user configuration options, while displaying PFC200 status information.

Besides the processing industry and building automation, typical applications for the PFC200 include standard machinery and equipment control (e.g., packaging, bottling and manufacturing systems, as well as textile, metal and wood processing machines).

Programming per IEC 61131-3

- Programmable with CODESYS V3.5 from Firmware Release 23, WAGO-I/O-PRO V2.3 or e!COCKPIT up to Firmware Release 22
- Direct connection of WAGO's I/O modules

Subject to changes. Please also observe the further product documentation!

- Expanding the firmware functions using open source packages like: Python, SQLite3, PHP, etc.
- Compiling their own C/C++ applications with direct or indirect bus access to the local bus, CANopen, or PROFIBUS.
- Compiling external libraries using CODESYS V2 to expand the PLC applications.
- There are detailed instructions for many of these tasks and ideas (see WAGO GitHub HowTo's).

### Wago Application Analytics

### Analytics Connection Direct from the PLC Program

The WAGO Analytics application makes it easy to leverage optimization potential.

This new software solution for WAGO controllers allows you to analyze, evaluate and optimize processes without having to leave the familiar PLC programming environment. You can use the WAGO Analytics application without entering the IT and Linux® environment directly; numerous function modules support data acquisition, data analysis and data evaluation. The analysis, evaluation and optimization functions run in the background on powerful WAGO Edge Devices, for which an executable installation package is available. All the data stays within the local network, so no Internet connection to additional systems is necessary.

Additional data sources can be connected conveniently via Node-RED, for example. Tools like Grafana can be used for visualization, allowing you to view data quickly and easily in dashboards. Anomalies and malfunctions can be detected automatically with ready-made algorithms.

### The Benefits for You:

- An easy way to get started with process data analysis
- Support throughout all analysis project phases
- Quick and easy data visualization
