

## ezLINX iCoupler Isolated Interface Development Environment

### FEATURES

- Plug and play system evaluation
- Easy evaluation of 8 isolated physical layer communication standards
- Open source hardware
- Open source software
- iCoupler and isoPower technology
- [ADSP-BF548](#) Blackfin processor running uClinux
- Sample PC application
- Sample embedded uClinux application
- 64 MB RAM
- 32 MB flash
- Extender connector for additional functionality

### APPLICATIONS

- Isolated interfaces

### EVALUATION KIT CONTENTS

#### EZLINX-IIIDE-EBZ

#### Power supply

#### ezLINX software DVD

#### USB A to mini USB B cable

### GENERAL DESCRIPTION

The ezLINX™ iCoupler® isolated interface development environment provides developers with a cost-effective, plug and play method for evaluating eight digitally isolated physical layer communication standards (USB, RS-422, RS-485, RS-232, CAN, SPI, I<sup>2</sup>C, and LVDS). The Blackfin® [ADSP-BF548](#) processor runs the uClinux® operating system and allows for easy customization through the open source hardware and software platform. Development time is significantly reduced for embedded designers and system architects who are designing and evaluating isolated communication standards. The interfaces on ezLINX use Analog Devices, Inc., isolated transceivers with integrated iCoupler and isoPower® digital isolator technology.

The hardware of the ezLINX iCoupler isolated interface development environment contains the [ADSP-BF548](#) Blackfin processor with 64 MB of RAM and 32 MB of flash memory. The isolated physical layer communication standards are implemented using Analog Devices isolated transceivers with integrated iCoupler and isoPower technology. Devices used to implement these isolated physical layer communication standards include the following:

- Isolated USB using the [ADuM3160](#)

### EZLINX-IIIDE-EBZ

Figure 1.

- Isolated CAN using the [ADM3053](#) signal and power isolated CAN transceiver
- Isolated RS-485 and RS-422 using the [ADM2587E](#) signal and power isolated RS-485/RS-422 transceiver
- Isolated RS-232 using the [ADM3252E](#) signal and power isolated RS-232 transceiver
- Isolated I<sup>2</sup>C using the [ADuM1250](#) and [ADuM5000](#)
- Isolated SPI using the [ADuM3401](#), [ADuM3402](#), and [ADuM5000](#)
- Isolated LVDS using the [ADuM3442](#), [ADuM5000](#), [ADN4663](#), and [ADN4664](#)

This evaluation board contains multiple parts with isoPower technology, which uses high frequency switching elements to transfer power through the transformer. Special care must be taken during PCB layout to meet emissions standards. See the [AN-0971 Application Note, Recommendations for Control of Radiated Emissions with isoPower Devices](#), for board layout recommendations. The ezLINX PCB layout has not been verified to pass radiated emissions specifications.

# SYSTEM ARCHITECTURE

The system architecture block diagram of the ezLINX hardware is shown in Figure 2. An extender connector, Hirose FX8-120P-SV(91)-

SV(91), is added for additional functionality. The Ethernet option is not fitted on the standard ezLINX hardware.

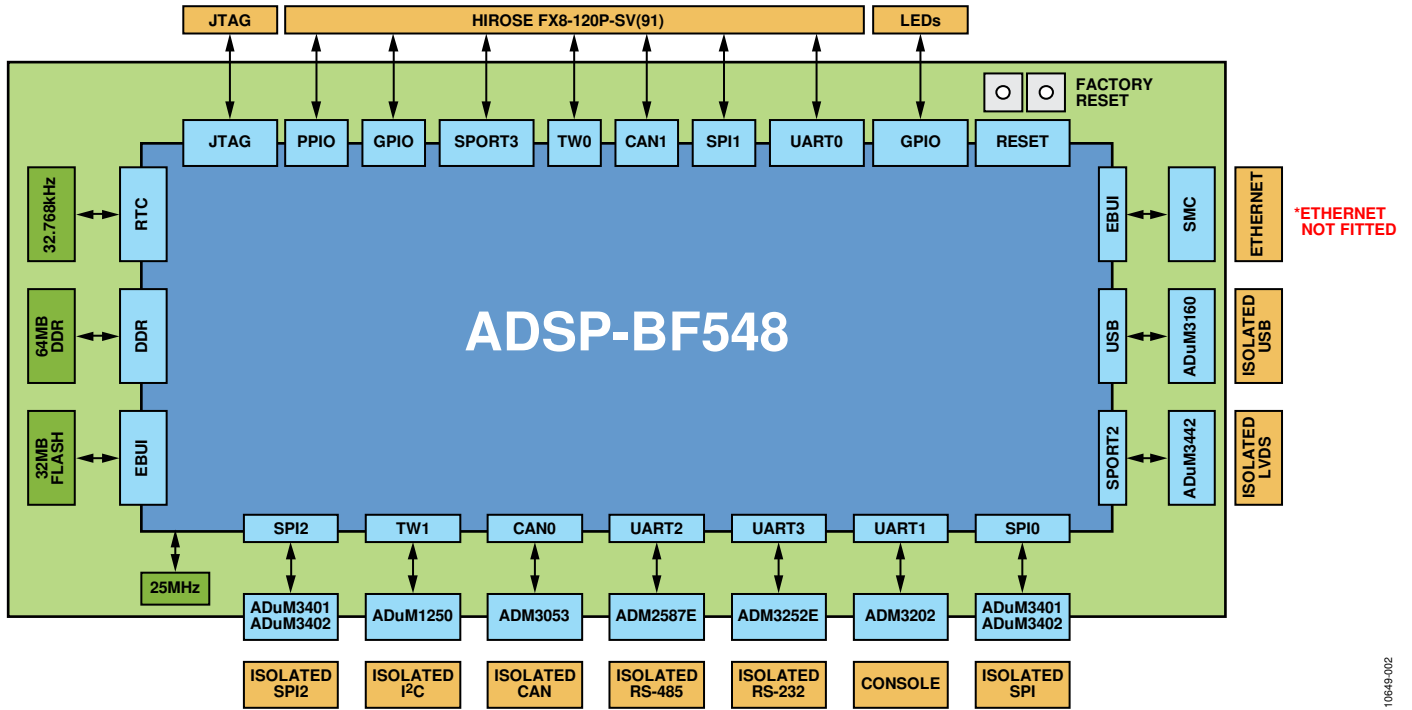

Figure 2. ezLINX Hardware Block Diagram

10049-002

**ISOLATED CAN**

The isolated CAN port is implemented using the [ADM3053](#) signal and power isolated CAN transceiver. The [ADM3053](#) connects to CAN0 of the [ADSP-BF548](#) and is capable of functioning at data rates of up to 1 Mbit/sec. Figure 3 shows a circuit diagram of the implementation of the [ADM3053](#) on the ezLINX hardware.

The CAN node can be configured using Jumpers JP17 and JP18. When both Jumpers JP17 and JP18 are fitted, the CAN node is split terminated with 120 Ω and a common-mode capacitor of 47 nF. If termination is not required, remove JP17 and JP18. Table 4 shows the jumper configurations for all the interfaces on ezLINX.

The 5 V supply is connected to the V<sub>CC</sub> pin (Pin 8) to power the isoPower isolated power supply of the [ADM3053](#). This generates an isolated 5 V on the V<sub>ISOOUT</sub> pin (Pin 12) of the [ADM3053](#) and must be connected to the V<sub>ISOIN</sub> pin (Pin 19). The 3.3 V supply is connected to the V<sub>IO</sub> pin (Pin 6) to power the iCoupler signal isolation of the [ADM3053](#). This is to ensure compatibility with

the 3.3 V logic of the Blackfin [ADSP-BF548](#). The R<sub>s</sub> pin (Pin 18) is connected through a 0 Ω resistor to CAN\_ISO\_GND to deactivate slew rate limiting.

A 4-pin screw terminal connector, J8, is used for easy access to the CANH (Pin 1 of J8), CANL (Pin 3 of J8), and CAN\_ISO\_GND (Pin 2 and Pin 4 of J8) signals.

The [AN-1123 Application Note, Controller Area Network \(CAN\) Implementation Guide](#), provides more information about implementing CAN nodes.

The [ADM3053](#) contains isoPower technology that uses high frequency switching elements to transfer power through the transformer. Special care must be taken during printed circuit board (PCB) layout to meet emissions standards. Refer to the [AN-0971 Application Note, Recommendations for Control of Radiated Emissions with isoPower Devices](#), for details on board layout considerations.

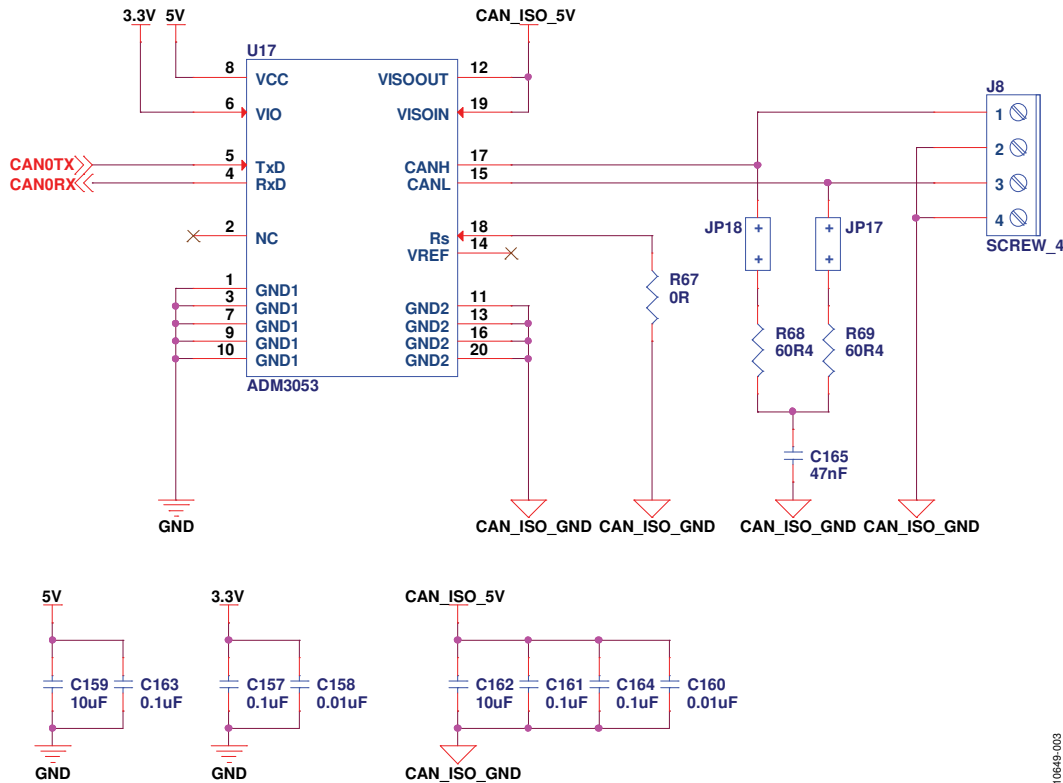

Figure 3. [ADM3053](#) Isolated CAN Implementation

10649-003

### ISOLATED RS-485 AND RS-422

The isolated RS-485 and RS-422 port is implemented using the [ADM2587E](#) signal and power isolated CAN transceiver. The [ADM2587E](#) connects to UART2 of the [ADSP-BF548](#) and is capable of functioning at data rates of up to 500 kbit/sec. Figure 4 shows a circuit diagram of the implementation of the [ADM2587E](#) on the ezLINX hardware.

The RS-485/RS-422 node can be configured using Jumpers JP3, JP4, JP19, and JP40. To configure the node as a half-duplex RS-485 node, connect JP3, JP4, and JP40. When JP3 and JP4 are fitted, A to Y are connected and B to Z are connected. When JP3 and JP4 are removed, the node is configured as a full-duplex RS-422 node. When JP19 is fitted, the A and B pins are terminated with 120 Ω. If termination is not required, remove JP19. When JP40 is connected, a pull-up resistor of 10 kΩ is connected to the RxD pin (Pin 4) of the [ADM2587E](#). Table 4 shows jumper configurations for all the interfaces on ezLINX.

The 3.3 V supply is connected to the V<sub>CC</sub> pins (Pin 2 and Pin 8) to power the *isoPower* isolated power supply and the *iCoupler* signal isolation of the [ADM2587E](#). This generates an isolated 3.3 V on the V<sub>ISOOUT</sub> pin (Pin 12) of the [ADM2587E](#), which is connected to the V<sub>ISOIN</sub> pin (Pin 19).

A 6-pin screw terminal connector, J7, is used for easy access to the A (Pin 2 of J7), B (Pin 3 of J7), Z (Pin 4 of J7), Y (Pin 5 of J7), and RS-485\_ISO\_GND (Pin 1 and Pin 6 of J7) signals.

The [AN-960 Application Note, RS-485/RS-422 Circuit Implementation Guide](#), provides more information about implementing RS-485 and RS-422 circuits.

The [ADM2587E](#) contains *isoPower* technology that uses high frequency switching elements to transfer power through the transformer. Special care must be taken during PCB layout to meet emissions standards. Refer to the [AN-0971 Application Note, Recommendations for Control of Radiated Emissions with isoPower Devices](#), for details on board layout considerations.

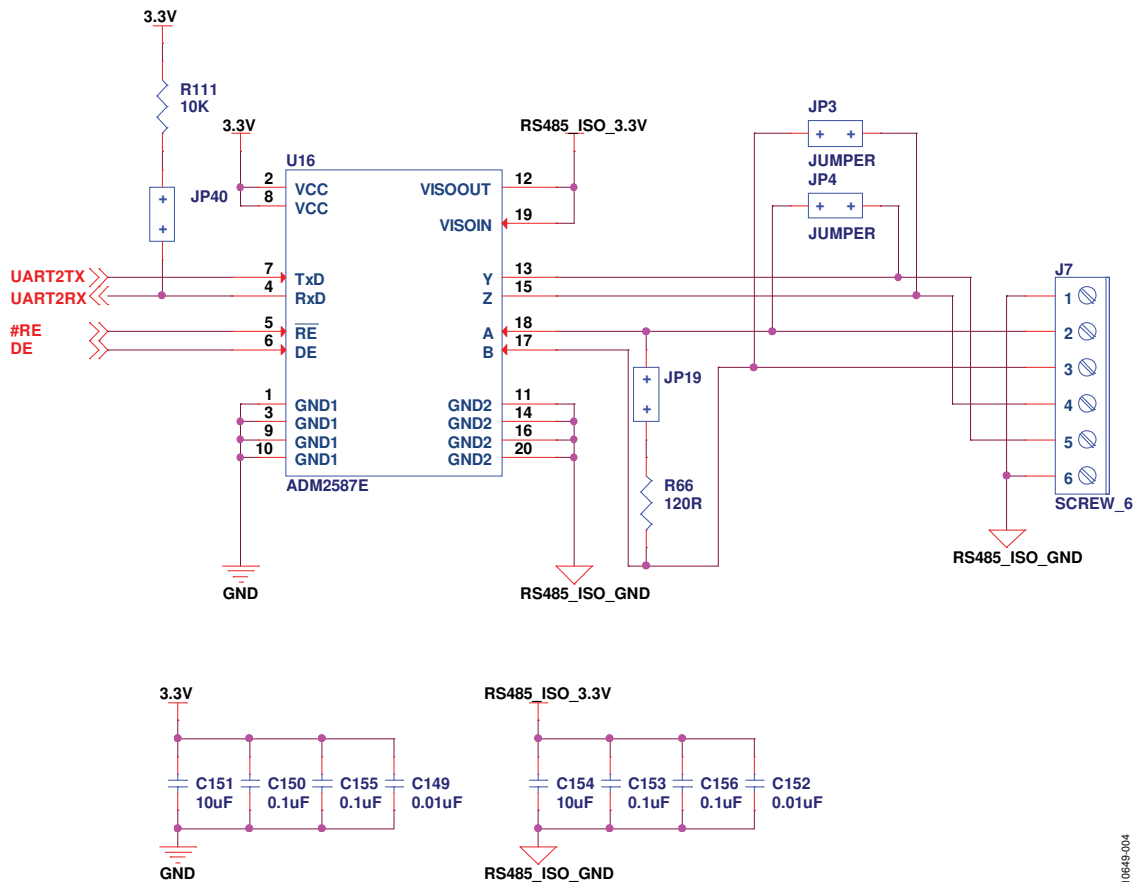

Figure 4. [ADM2587E](#) Isolated RS-485 and RS-422 Implementation

**ISOLATED USB**

The isolated USB port is implemented using the **ADuM3160** full speed USB isolator. The **ADuM3160** connects to the integrated PHY of the **ADSP-BF548**'s USB controller and is capable of functioning at data rates of up to 12 Mbit/sec. Figure 5 shows a circuit diagram of the implementation of the **ADuM3160** on the ezLINX hardware.

The  $V_{BUS1}$  pin (Pin 1) and  $V_{DD1}$  pin (Pin 3) of the **ADuM3160** are powered from the 5 V VBUS line of the USB mini connector and can only be connected to a USB master. The  $V_{BUS2}$  pin (Pin 16) and  $V_{DD2}$  pin (Pin 14) are powered from the 3.3 V generated by the ezLINX power supply.

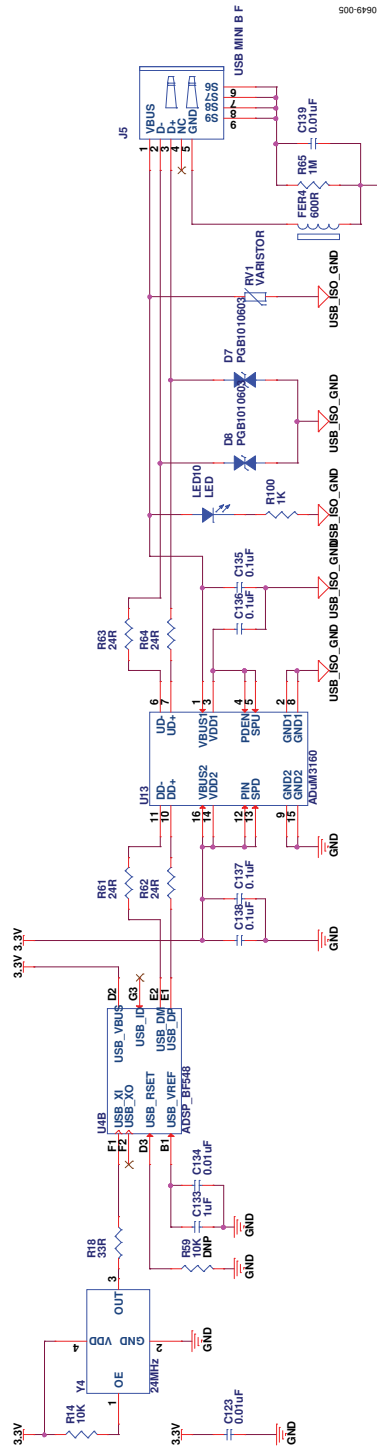

Figure 5. ADuM3160 Isolated USB Implementation

**ISOLATED RS-232**

The isolated RS-232 port is implemented using the [ADM3252E](#) signal and power isolated RS-232 transceiver. The [ADM3252E](#) connects to UART3 of the [ADSP-BF548](#) and is capable of functioning at data rates of up to 460 kbit/sec. Figure 6 shows a circuit diagram of the implementation of the [ADM3252E](#) on the ezLINX hardware.

When the JP2 jumper is fitted, it implements a loopback of the isolated RS-232 transmitter output (Pin T<sub>OUT1</sub>) to the receiver input (Pin R<sub>IN1</sub>).

The V<sub>CC</sub> pins (Pin A2, Pin B1, and Pin B2) of the [ADM3252E](#) are powered with 3.3 V and generate an isolated 3.3 V on the

V<sub>ISO</sub> pins (Pin A10, Pin B10, and Pin C10) using Analog Devices *isoPower* technology.

A 3-pin screw terminal connector, J6, is used for easy access to the T<sub>OUT1</sub> (Pin 2 of J6), R<sub>IN1</sub> (Pin 3 of J6), and RS232\_ISO\_GND (Pin 1 of J6) signals.

The [ADM3252E](#) contains *isoPower* technology that uses high frequency switching elements to transfer power through the transformer. Special care must be taken during PCB layout to meet emissions standards. Refer to the [AN-0971 Application Note, Recommendations for Control of Radiated Emissions with isoPower Devices](#), for details on board layout considerations.

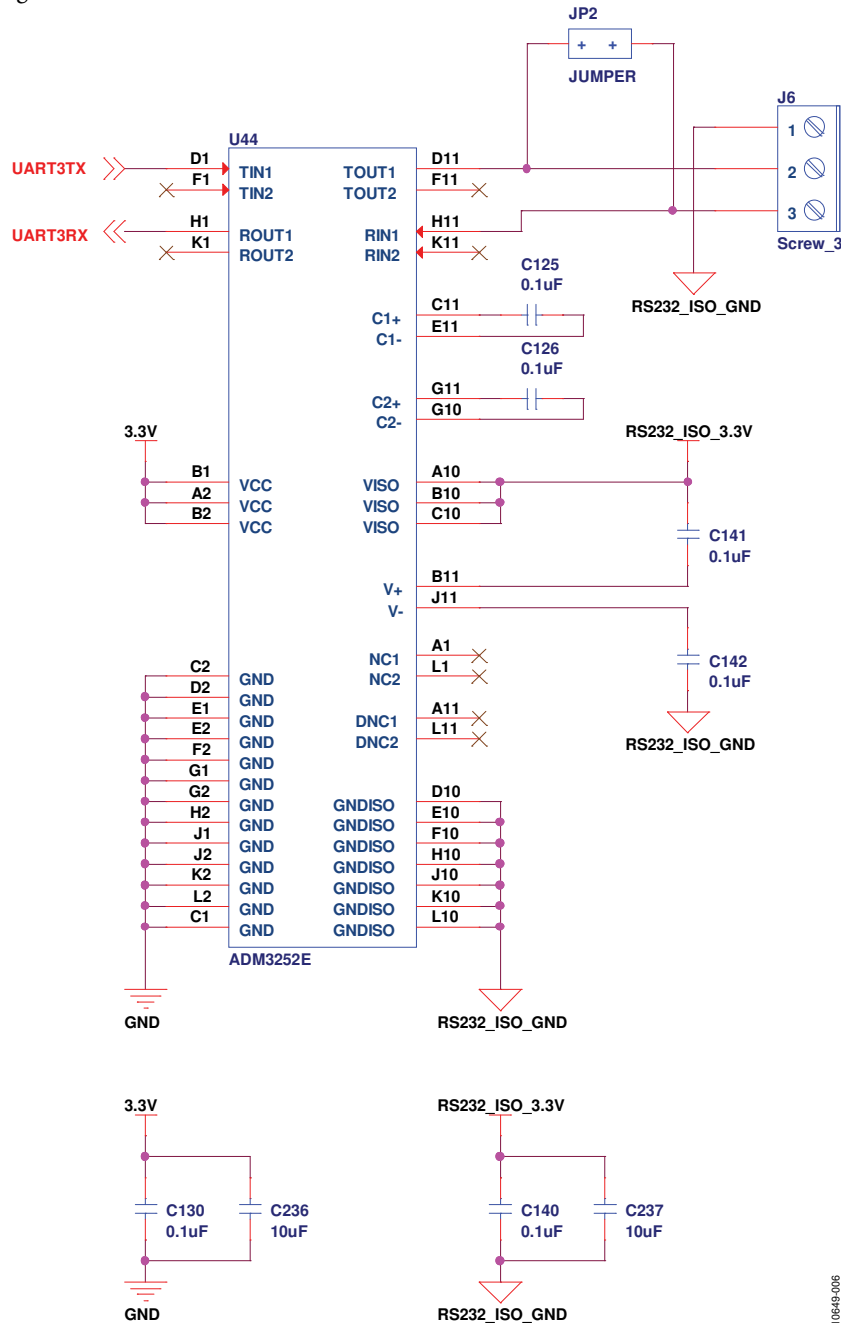

Figure 6. [ADM3252E](#) Isolated RS-232 Implementation

**ISOLATED I<sup>2</sup>C**

The isolated I<sup>2</sup>C port is implemented using the ADuM1250 I<sup>2</sup>C isolator and the ADuM5000 isoPower isolated dc-to-dc converter. The ADuM1250 connects to TWI1 of the ADSP-BF548 and is capable of functioning at a maximum frequency of 1 MHz.

Figure 7 shows a circuit diagram of the implementation of the ADuM1250 and ADuM5000 on the ezLINX hardware.

The V<sub>DD1</sub> pin (Pin 1)) of the ADuM1250 and the V<sub>DD1</sub> pins (Pin 1 and Pin 7) of the ADuM5000 are powered by 3.3 V. The ADuM5000 generates an isolated 3.3 V, which is used to supply power to the V<sub>DD2</sub> pin (Pin 8) of the ADuM1250.

A 3-pin screw terminal connector, J22, is used for easy access to the SDA (Pin 1 of J22), SCL (Pin 2 of J22), and I2C\_ISO\_GND (Pin 3 of J22) signals.

The ADuM5000 contains isoPower technology that uses high frequency switching elements to transfer power through the transformer. Special care must be taken during PCB layout to meet emissions standards. See the AN-0971 Application Note, *Recommendations for Control of Radiated Emissions with isoPower Devices*, for board layout recommendations.

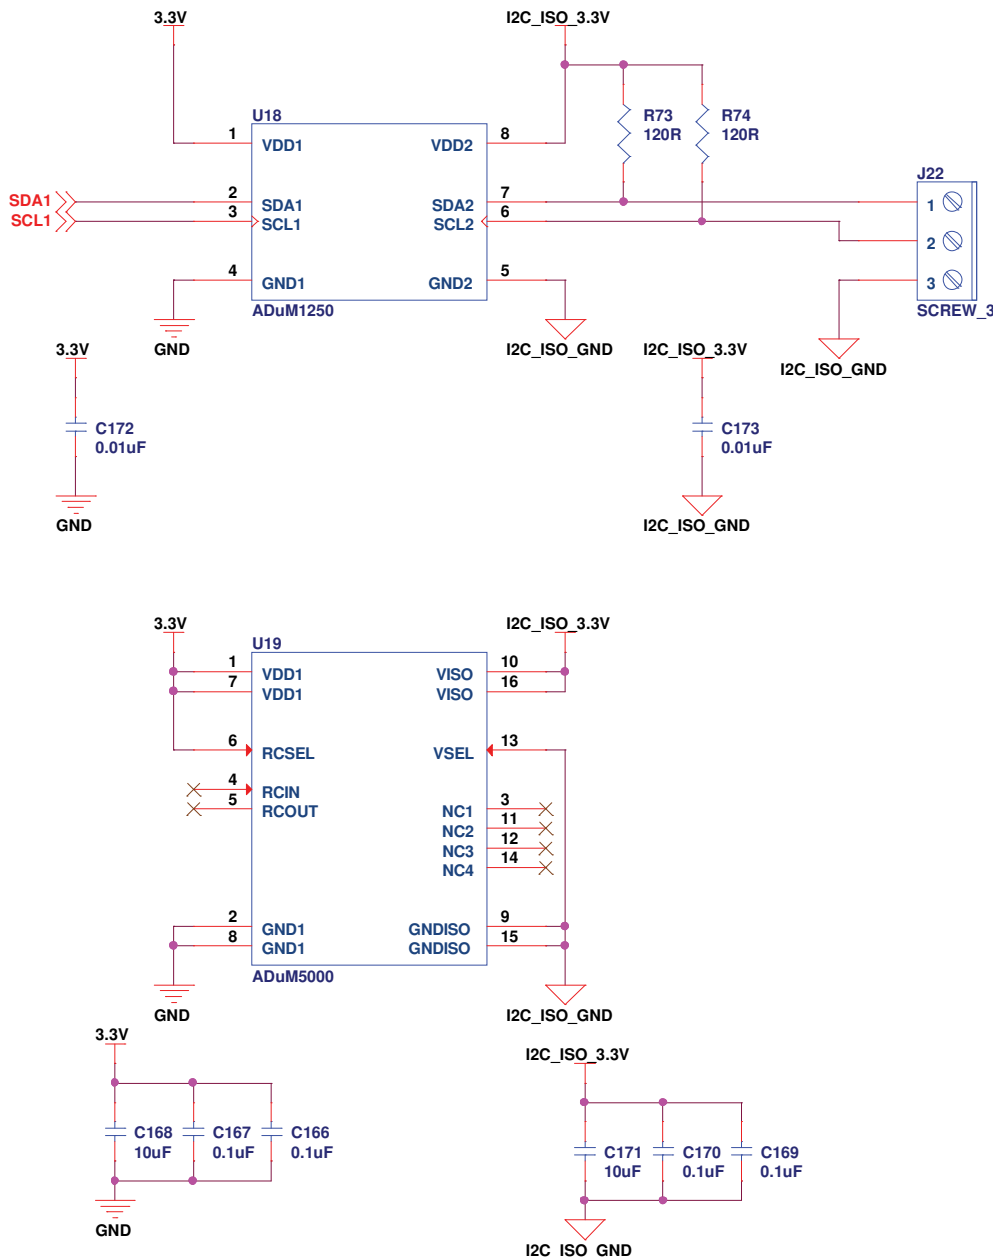

Figure 7. ADuM1250 and ADuM5000 Isolated I<sup>2</sup>C Implementation

10649-007

## ISOLATED SPI

Two isolated SPI ports are implemented using the [ADuM3401](#), the [ADuM3402](#) *iCoupler* signal isolators, and the [ADuM5000](#) *isoPower* isolated dc-to-dc converter. The isolated SPI0 implementation on the *ezLINX* hardware uses the [ADuM3401](#). The [ADuM3401](#) connects to SPI0 of the Blackfin [ADSP-BF548](#) and is used to isolate the SCLK, MISO, SSEL1, and MOSI lines. The [ADuM3402](#) is used for isolating the SPI slave select lines. Figure 8 shows a circuit diagram of the implementation of isolated SPI1 using the [ADuM3401](#), [ADuM3402](#), and [ADuM5000](#) on the *ezLINX* hardware.

The isolated SPI2 implementation on the *ezLINX* hardware uses the [ADuM3401](#). The [ADuM3401](#) connects to SPI2 of the [ADSP-BF548](#) and is used to isolate the SCLK, MISO, SSEL1, and MOSI lines. The [ADuM3402](#) is used for isolating the SPI slave select lines. Figure 9 shows a circuit diagram of the implementation of the isolated SPI2 using the [ADuM3401](#), [ADuM3402](#), and [ADuM5000](#) on the *ezLINX* hardware.

The  $V_{DD1}$  pin (Pin 1) of the [ADuM3401](#) and [ADuM3402](#) and the  $V_{DD1}$  pins (Pin 1 and Pin 7) of the [ADuM5000](#) are powered by 3.3 V. The [ADuM5000](#) generates an isolated 3.3 V, which is used to supply power to the  $V_{DD2}$  pin (Pin 16) of the [ADuM3401](#) and [ADuM3402](#).

Two 7-pin screw terminal connectors, J10 and J25, are used for easy access to the SPISCK (Pin 1 of J10 and J25), SPIMOSI (Pin 2 of J10 and J25), SPISEL1/SPISS (Pin 3 of J10 and J25), SPIMISO (Pin 4 of J10 and J25), SPISEL2 (Pin 5 of J10 and J25), SPISEL3 (Pin 6 of J10 and J25), and SPI\_ISO\_GND (Pin 7 of J10 and J25) signals.

To connect the isolated SPI0 as a master, connect Jumpers JP5, JP7, JP9, JP11, JP13, JP15, JP21, and JP36 while leaving Jumpers JP6, JP8, JP10, JP12, JP14, JP16, JP20, and JP37 open (see the Warnings section). To connect the isolated SPI0 as a slave, connect Jumpers JP6, JP8, JP10, JP12, JP14, JP16, JP20, and JP37 while leaving Jumpers JP5, JP11, JP13, JP15, JP21, and JP36 (see the Warnings section).

The [ADuM5000](#) contains *isoPower* technology that uses high frequency switching elements to transfer power through the transformer. Special care must be taken during PCB layout to meet emissions standards. See the [AN-0971 Application Note, Recommendations for Control of Radiated Emissions with \*isoPower\* Devices](#), for board layout recommendations.

### Warnings

#### JP20 and JP21

JP20 and JP21 should never both be connected because doing so will create a short circuit between 3.3 V and GND.

#### JP34 and JP35

JP34 and JP35 should never both be connected because doing so will create a short circuit between 3.3 V and GND.

10649-008

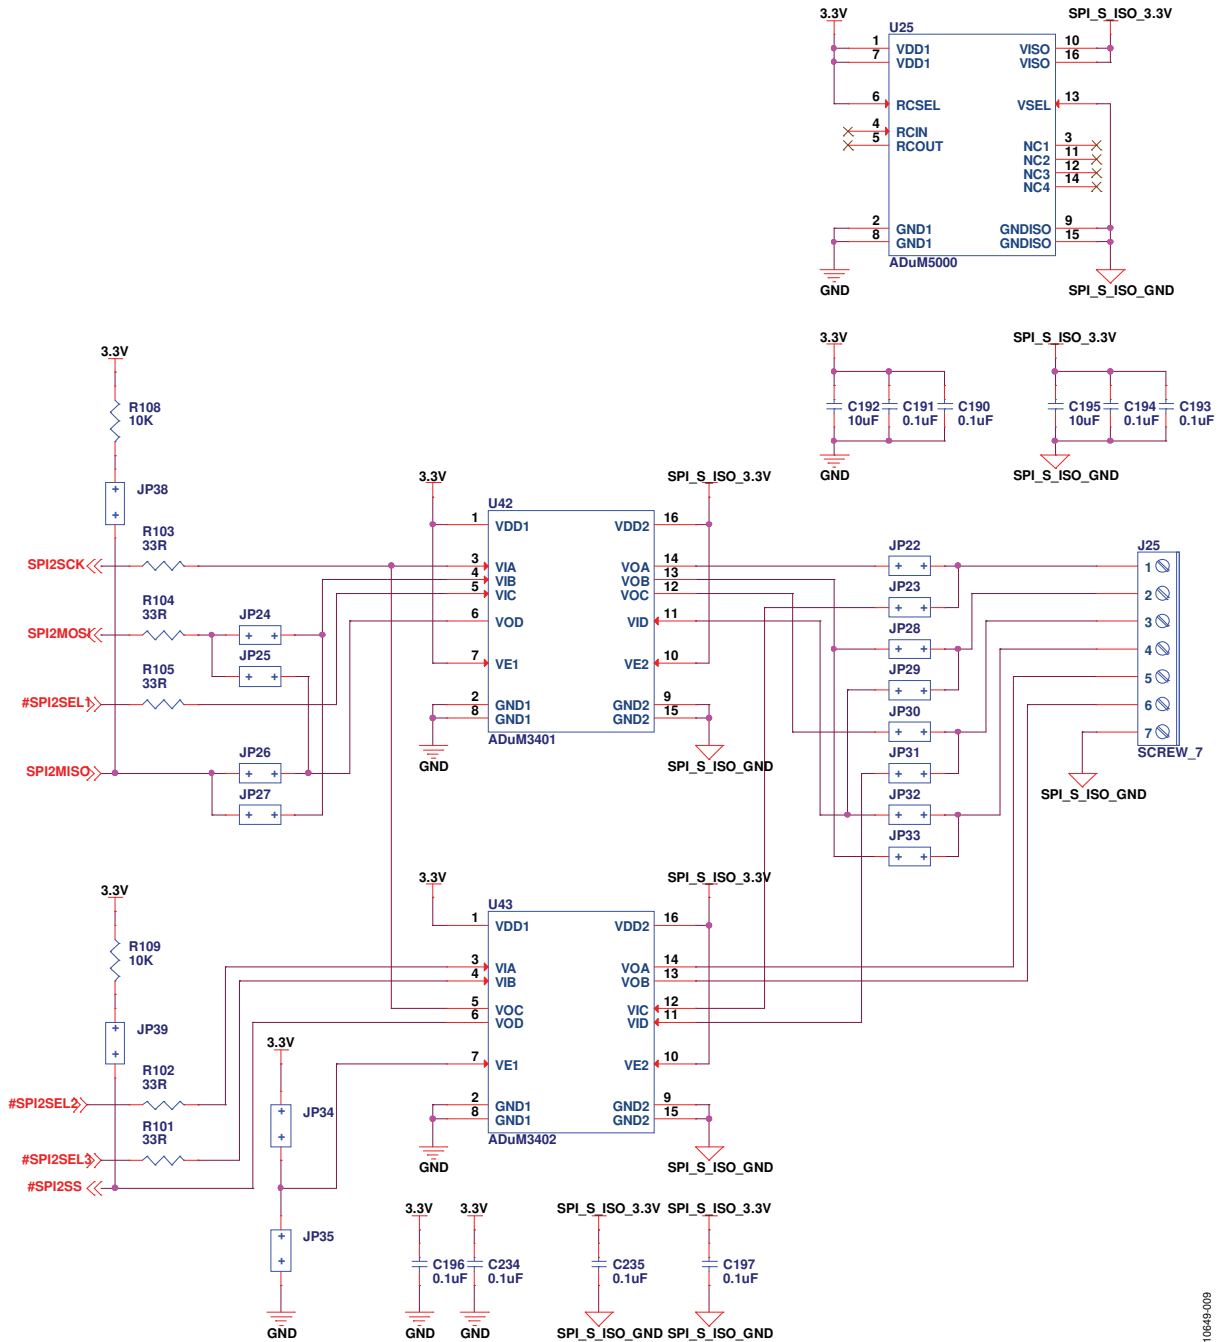

Figure 9. ADuM3401, ADuM3402, ADuM5000 Isolated SPI2 Implementation

10649-009

## ISOLATED LVDS

The isolated LVDS port is implemented using the [ADuM3442](#) *iCoupler* signal isolator, the [ADN4664](#) dual LVDS receiver, the [ADN4663](#) dual LVDS transmitter, and the [ADuM5000](#) *isoPower* isolated dc-to-dc converter. The [ADuM3442](#) is connected to SPORT2 of the [ADSP-BF548](#). Figure 10 shows a circuit diagram of the implementation of the isolated LVDS using the [ADuM3442](#), [ADN4663](#), [ADN4664](#), and [ADuM5000](#) on the *ezLINUX* hardware.

The  $V_{DD1}$  pin (Pin 1) of the [ADuM3442](#) and the  $V_{DD1}$  pin (Pin 1 and Pin 7) of the [ADuM5000](#) are powered by 3.3 V. The [ADuM5000](#) generates an isolated 3.3 V, which is used to supply power to the

$V_{DD2}$  pin (Pin 16) of the [ADuM3442](#), the  $V_{CC}$  pin (Pin 1) of the [ADN4663](#), and the  $V_{CC}$  pin (Pin 8) of the [ADN4664](#).

A 32-pin header connector is used for easy access to the isolated LVDS signals.

The [ADuM5000](#) contains *isoPower* technology that uses high frequency switching elements to transfer power through the transformer. Special care must be taken during PCB layout to meet emissions standards. See the [AN-0971 Application Note, Recommendations for Control of Radiated Emissions with \*isoPower\* Devices](#), for board layout recommendations.

**POWER INPUT**

An ac-to-dc desktop power supply is used to supply 7.5 V input to the J1 barrel connector on the ezLINX hardware. This supply connects to the UNREG\_IN node of the circuit through a protection circuit as shown in Figure 11.

**3.3 V POWER SUPPLY**

The ADP1864 constant frequency, current-mode, step-down dc-to-dc controller is used with an external P-channel MOSFET to generate the regulated 3.3 V power supply for the ezLINX hardware. The circuit implementation of the 3.3 V power supply is shown in Figure 12.

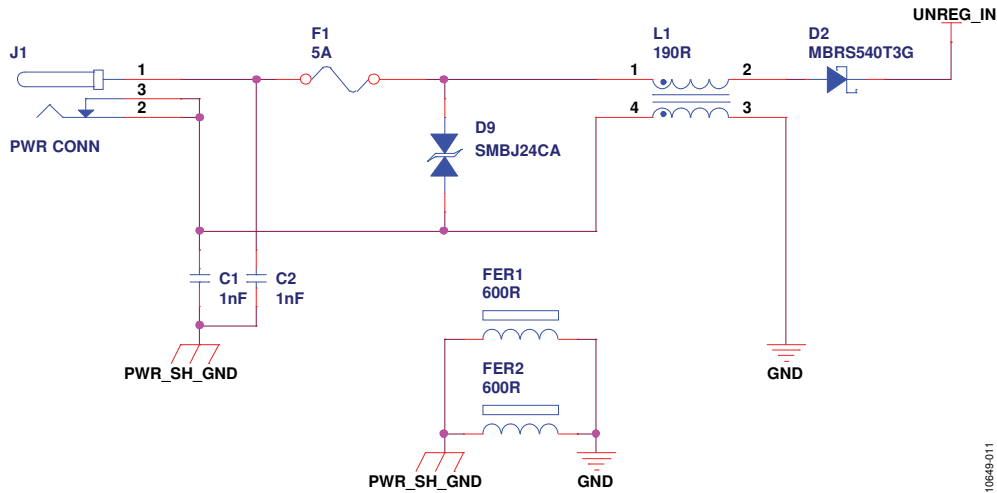

Figure 11. Power Input

10648-011

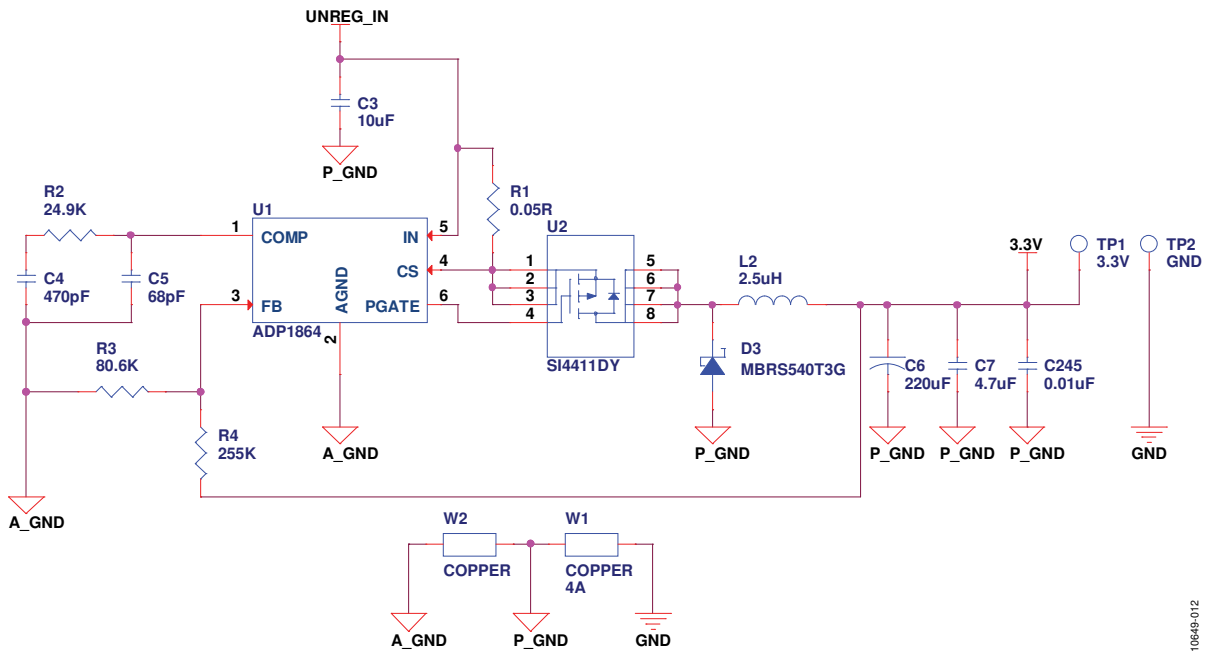

Figure 12. 3.3 V Power Supply

10649-012

**1.2 V, 2.5 V, AND 5 V POWER SUPPLIES**

A P-channel MOSFET is used to regulate the 3.3 V input to 1.2 V (see Figure 13). The ADP1706 linear regulator is used to regulate the 3.3 V input to 2.5 V (see Figure 14). The ADP3335

low dropout regulator is used to regulate the UNREG\_IN input to 5 V (see Figure 15).

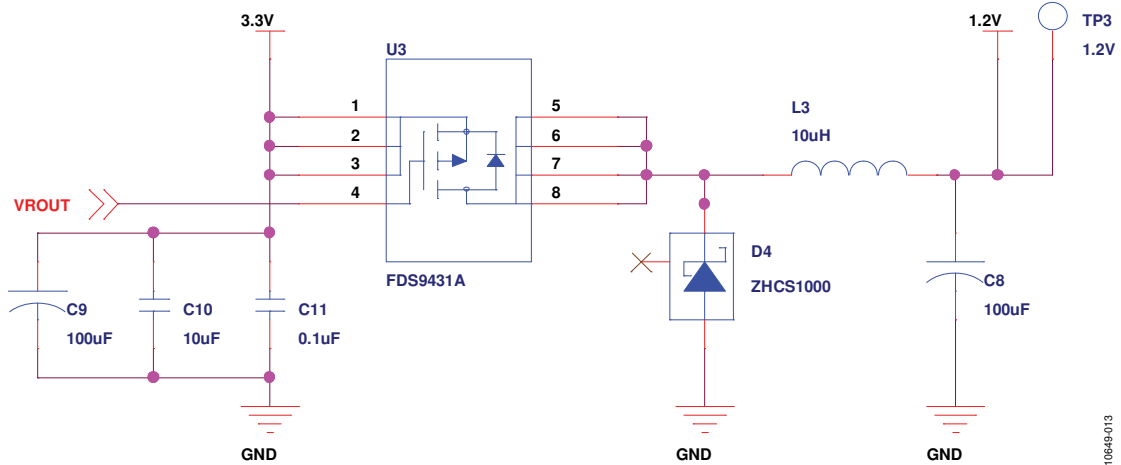

Figure 13. 1.2 V Power Supply

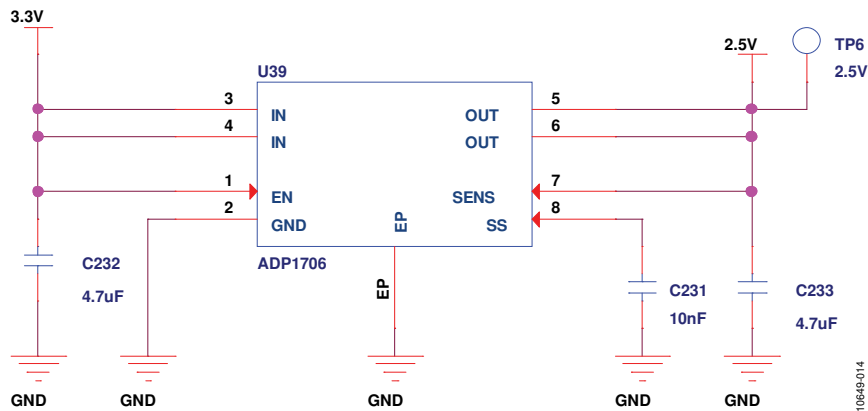

Figure 14. 2.5 V Power Supply

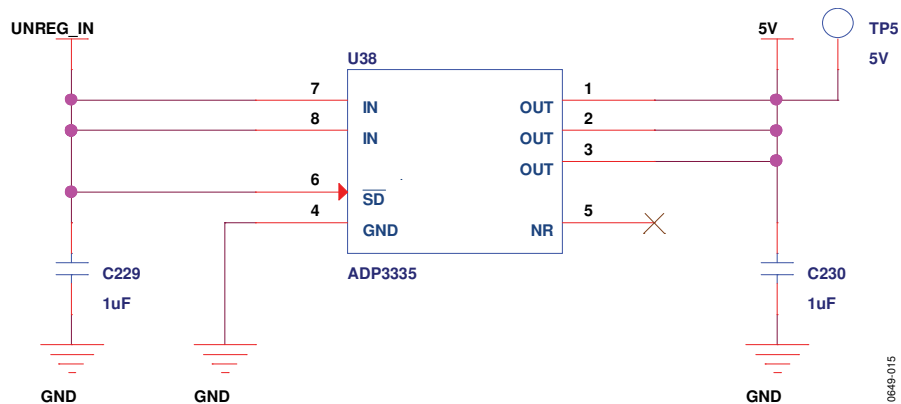

Figure 15. 5 V Power Supply

**EXTENDER CONNECTOR**

The Hirose FX8-120P-SV(91) extender connector is used for daughter board connections. This allows additional functionality to be added to the ezLINX hardware. Figure 16

shows the circuit implementation of the J23 and J26 extender connectors. Connector J26 is a 3-pin header connector that allows the CAN1 signals of the [ADSP-BF548](#) to be routed to an external daughter board.

Figure 16. Extender Connector Using Hirose FX8-120P-SV(91)

**RS-232 CONSOLE**

The RS-232 console connector is used for accessing the console of the uClinux kernel running on the [ADSP-BF548](#) processor. It uses the [ADM3202](#) RS-232 line driver and receiver to connect to UART1 of the [ADSP-BF548](#). The RS-232 signals connect to a

DB-9 connector, J4. A circuit implementation of the RS-232 console is shown in Figure 17.

The RS-232 console is used to directly access the uClinux kernel running on the [ADSP-BF548](#). When the console is connected to a RS-232 port on the PC, the kernel can be accessed through a terminal program.

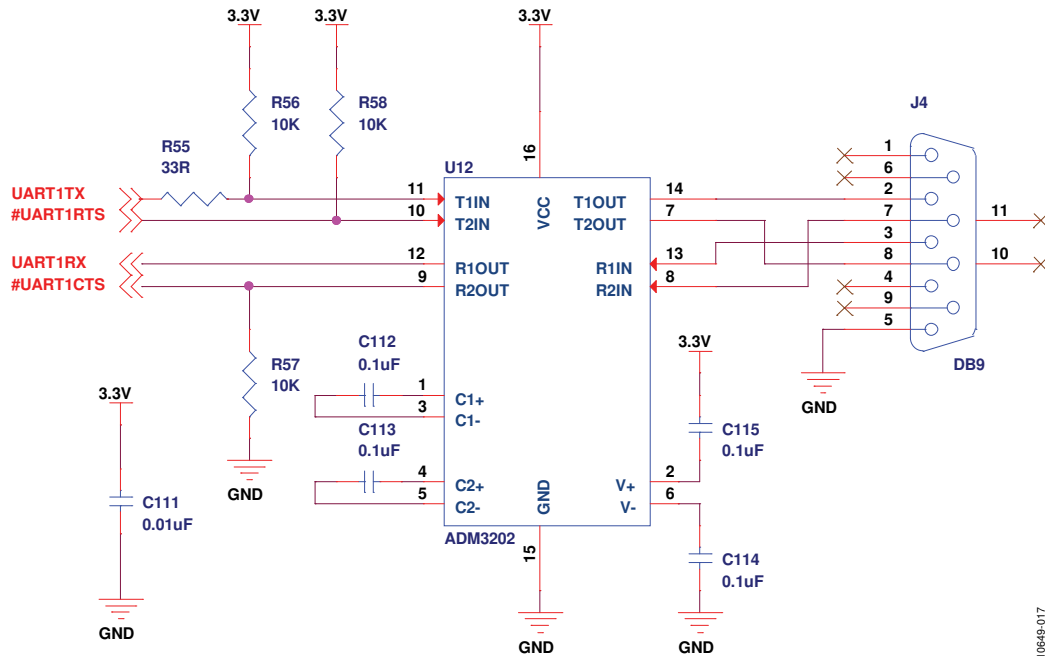

Figure 17. RS-232 Console Implementation

10649-017

**LEDs**

There are 10 LEDs on the ezLINX evaluation board. The red LED6 illuminates to indicate when the reset button is being pressed. The orange LED10 illuminates to indicate when the isolated USB port is connected to a USB port on the PC. The green LED7 illuminates to indicate when the board is powered.

The orange LED1 illuminates to indicate when the uClinux kernel and application finishes booting up.

Table 4 describes the functionality and connections of the LEDs for the [ADSP-BF548](#) and other circuitry.

**Table 3.**

<b>LED</b>	<b>ADSP-BF548 Port</b>	<b>Function</b>
LED1	PD6	Illuminates when the uClinux kernel and application finishes booting up. This LED can also be used as a general-purpose indicator that can be turned on and off through software.
LED2	PD7	General-purpose indicator that can be turned on and off through software.
LED3	PD8	General-purpose indicator that can be turned on and off through software.
LED4	PD9	General-purpose indicator that can be turned on and off through software.
LED5	PD10	General-purpose indicator that can be turned on and off through software.
LED6	PD11	General-purpose indicator that can be turned on and off through software.
LED7	Not Applicable	Illuminates when the 3.3 V power supply is available.
LED8	Not Applicable	Illuminates when the reset button is pressed.
LED10	Not Applicable	Illuminates when the VBUS voltage from the USB host is connected.

## JUMPER CONFIGURATIONS

Table 4.

Interface	Configuration	Jumpers Fitted	Jumpers Open
RS-485/RS-422	Half-duplex configuration	JP3, JP4, JP40	Not applicable
	Full-duplex configuration 120 $\Omega$ termination	Not applicable JP19	JP3, JP4, JP40 Not applicable
RS-232	Loopback T <sub>OUT1</sub> to R <sub>IN1</sub>	JP2	Not applicable
CAN	Split terminate the bus with 120 $\Omega$ and a common-mode 47 nF capacitor	JP17, JP18	Not applicable
SPI0	No termination	Not applicable	JP17, JP18
	Master mode	JP5, JP7, JP9, JP11, JP13, JP15, JP20, <sup>1</sup> JP36	JP6, JP8, JP10, JP12, JP14, JP16, JP21, <sup>1</sup> JP37
SPI2	Slave mode	JP6, JP8, JP10, JP12, JP14, JP16, JP21, JP37	JP5, JP7, JP9, JP11, JP13, JP15, JP20, JP36
	Master mode	JP22, JP24, JP26, JP28, JP30, JP32, JP35, <sup>2</sup> JP38	JP23, JP25, JP27, JP29, JP31, JP33, JP34, <sup>2</sup> JP39
	Slave mode	JP23, JP25, JP27, JP29, JP31, JP33, JP34, JP39	JP22, JP24, JP26, JP28, JP30, JP32, JP35, JP38

<sup>1</sup> Warning: JP20 and JP21 should never both be connected because doing so will create a short circuit between 3.3 V and GND.<sup>2</sup> Warning: JP34 and JP35 should never both be connected because doing so will create a short circuit between 3.3 V and GND.

## NOTES

I<sup>2</sup>C refers to a communications protocol originally developed by Philips Semiconductors (now NXP Semiconductors).

**ESD Caution**

**ESD (electrostatic discharge) sensitive device.** Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

**Legal Terms and Conditions**

By using the evaluation board discussed herein (together with any tools, components documentation or support materials, the "Evaluation Board"), you are agreeing to be bound by the terms and conditions set forth below ("Agreement") unless you have purchased the Evaluation Board, in which case the Analog Devices Standard Terms and Conditions of Sale shall govern. Do not use the Evaluation Board until you have read and agreed to the Agreement. Your use of the Evaluation Board shall signify your acceptance of the Agreement. This Agreement is made by and between you ("Customer") and Analog Devices, Inc. ("ADI"), with its principal place of business at One Technology Way, Norwood, MA 02062, USA. Subject to the terms and conditions of the Agreement, ADI hereby grants to Customer a free, limited, personal, temporary, non-exclusive, non-sublicensable, non-transferable license to use the Evaluation Board FOR EVALUATION PURPOSES ONLY. Customer understands and agrees that the Evaluation Board is provided for the sole and exclusive purpose referenced above, and agrees not to use the Evaluation Board for any other purpose. Furthermore, the license granted is expressly made subject to the following additional limitations: Customer shall not (i) rent, lease, display, sell, transfer, assign, sublicense, or distribute the Evaluation Board; and (ii) permit any Third Party to access the Evaluation Board. As used herein, the term "Third Party" includes any entity other than ADI, Customer, their employees, affiliates and in-house consultants. The Evaluation Board is NOT sold to Customer; all rights not expressly granted herein, including ownership of the Evaluation Board, are reserved by ADI. CONFIDENTIALITY. This Agreement and the Evaluation Board shall all be considered the confidential and proprietary information of ADI. Customer may not disclose or transfer any portion of the Evaluation Board to any other party for any reason. Upon discontinuation of use of the Evaluation Board or termination of this Agreement, Customer agrees to promptly return the Evaluation Board to ADI. ADDITIONAL RESTRICTIONS. Customer may not disassemble, decompile or reverse engineer chips on the Evaluation Board. Customer shall inform ADI of any occurred damages or any modifications or alterations it makes to the Evaluation Board, including but not limited to soldering or any other activity that affects the material content of the Evaluation Board. Modifications to the Evaluation Board must comply with applicable law, including but not limited to the RoHS Directive. TERMINATION. ADI may terminate this Agreement at any time upon giving written notice to Customer. Customer agrees to return to ADI the Evaluation Board at that time. LIMITATION OF LIABILITY. THE EVALUATION BOARD PROVIDED HEREUNDER IS PROVIDED "AS IS" AND ADI MAKES NO WARRANTIES OR REPRESENTATIONS OF ANY KIND WITH RESPECT TO IT. ADI SPECIFICALLY DISCLAIMS ANY REPRESENTATIONS, ENDORSEMENTS, GUARANTEES, OR WARRANTIES, EXPRESS OR IMPLIED, RELATED TO THE EVALUATION BOARD INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTY OF MERCHANTABILITY, TITLE, FITNESS FOR A PARTICULAR PURPOSE OR NONINFRINGEMENT OF INTELLECTUAL PROPERTY RIGHTS. IN NO EVENT WILL ADI AND ITS LICENSORS BE LIABLE FOR ANY INCIDENTAL, SPECIAL, INDIRECT, OR CONSEQUENTIAL DAMAGES RESULTING FROM CUSTOMER'S POSSESSION OR USE OF THE EVALUATION BOARD, INCLUDING BUT NOT LIMITED TO LOST PROFITS, DELAY COSTS, LABOR COSTS OR LOSS OF GOODWILL. ADI'S TOTAL LIABILITY FROM ANY AND ALL CAUSES SHALL BE LIMITED TO THE AMOUNT OF ONE HUNDRED US DOLLARS (\$100.00). EXPORT. Customer agrees that it will not directly or indirectly export the Evaluation Board to another country, and that it will comply with all applicable United States federal laws and regulations relating to exports. GOVERNING LAW. This Agreement shall be governed by and construed in accordance with the substantive laws of the Commonwealth of Massachusetts (excluding conflict of law rules). Any legal action regarding this Agreement will be heard in the state or federal courts having jurisdiction in Suffolk County, Massachusetts, and Customer hereby submits to the personal jurisdiction and venue of such courts. The United Nations Convention on Contracts for the International Sale of Goods shall not apply to this Agreement and is expressly disclaimed.
