

Features

- Two independent clock channels
- Frequency and Phase Sync over Packet Networks
 - Frequency accuracy performance for WCDMA-FDD, GSM, LTE-FDD and femtocell applications
 - Frequency performance for ITU-T G.823 and G.824 synchronization interface, as well as G.8261 PNT PEC and CES interfaces
 - Phase Synchronization performance for WCDMA-TDD, Mobile WiMAX, TD-SCDMA and CDMA2000 applications
- Client holdover and reference switching between multiple Servers
- Server, client and boundary clock operation
- Any input clock rate from 1 kHz to 750 MHz
- Automatic hitless reference switching and digital holdover on reference fail
- Digital PLLs filter jitter at 5.2 Hz, 14 Hz, 28 Hz, 56 Hz, 112 Hz, 224 Hz, 448 Hz or 896 Hz
- Operates from a single crystal resonator or clock oscillator

Ordering Information:

ZL30367GDG2 144 Pin LPGA Trays

 Pb Free Tin/Silver/Copper
 -40°C to +85°C
 Package size: 13 x 13 mm

- Electrical phase alignment to input 1 Hz frame pulse with associated reference clock (ref/sync pairing)
- Programmable synthesizers
 - Any output clock rate from 1 Hz to 750 MHz
 - Low output jitter for 10G PHYs
 - Six LVPECL outputs and six LVCMOS outputs
- Field programmable via SPI/I²C interface

Applications

- OTN muxponders and transponders
- 10 Gigabit line cards
- Synchronous Ethernet, SONET/SDH, Fibre Channel, XAUI

Figure 1 - Functional Block Diagram

Detailed Features

General

- Two independent clock channels
- Operates from a single crystal resonator or clock oscillator
- Configurable via SPI or I²C interface

Time Synchronization Algorithm

- External algorithm controls software digital PLL to adjust frequency & phase alignment
- Frequency, Phase and Time Synchronization over IP, MPLS and Ethernet Packet Networks
- Frequency accuracy performance for WCDMA-FDD, GSM, LTE-FDD and femtocell applications, with target performance less than ± 15 ppb.
- Frequency performance for ITU-T G.823 and G.824 synchronization interface, as well as G.8261 PNT EEC, PNT PEC and CES interface specifications.
- Phase Synchronization performance for WCDMA-TDD, Mobile WiMAX, TD-SCDMA and CDMA2000 applications with target performance less than ± 1 μ s phase alignment.
- Time Synchronization for UTC-traceability and GPS replacement.
- Client reference switching between multiple Servers
- Client holdover when Server packet connectivity is lost

Electrical Clock Inputs

- Nine input references configurable as single ended or differential and two singled ended input references
- Synchronize to any clock rate from 1 kHz to 750 MHz on differential inputs
- Synchronize to any clock rate from 1 kHz to 177.75 MHz on singled-ended inputs
- Synchronize to sync pulse and clock pair
- Flexible input reference monitoring automatically disqualifies references based on frequency and phase irregularities
 - LOS
 - Single cycle monitor
 - Precise frequency monitor
 - Coarse frequency monitor
 - Guard soak timer
- Per input clock delay compensation

Electrical Clock Engine

- Flexible two-stage architecture translates between arbitrary data rates, line coding rates and FEC rates
- Internal state machine automatically controls mode of operation (free-run, locked, holdover)
- Automatic hitless reference switching and digital holdover on reference fail
 - Physical-to-physical reference switching
 - Physical-to-packet reference switching
 - Packet-to-physical reference switching
 - Packet-to-packet reference switching

- Selectable phase slope limiting
- Supports ITU-T G.823, G.824 and G.8261 for 2048 kbit/s and 1544 kbit/s interfaces

Electrical Clock Generation

- Three programmable synthesizers
- Six LVPECL outputs
 - Two LVPECL outputs per synthesizer
 - Generate any clock rate from 1 Hz to 750 MHz
 - Low output jitter for 10G PHYs
 - Meets OC-192, STM-64, 1 GbE & 10 GbE interface jitter requirements
- Six LVCMOS outputs
 - Two LVCMOS outputs per synthesizer
 - Generate any clock rate from 1 Hz to 177.75 MHz
- Programmable output advancement/delay to accommodate trace delays or compensate for system routing paths
- Outputs may be disabled to save power

API Software

- Interfaces to 1588-capable PHY and switches with integrated timestamping
- Abstraction layer for independence from OS and CPU, from embedded SoC to home-grown
- Fits into centralized, highly integrated pizza box architectures as well as distributed architectures with multiple line cards and timing cards
