

KLG-GOPA-4

KLG-GOPA-4 is 5 grams of water washed, aqueous graphene oxide paste, in a single sealed glass jar. This aqueous paste is 10% graphene oxide, and 1% HCl. Kennedy Labs' graphene oxide is produced using a Modified Hummers' method. Water washing with deionized water reduced this paste to a solid weak acid format, and when diluted the suspension has a ph of >4. KLG-GOPA-4 is not easily

dispersed into water and it should not be used to produce single sheets.

Specification

Quantity	5 grams
Unit	Glass jar
Colour	Black
Consistency	Paste
