Solid-Core Wire Spool - 25ft - 22AWG - Gray

PRODUCT ID: 2983

Description

This spool of solid-core wire is easily soldered to and can handle up to 200°C and 600V. We like this wire because it's flexible but also holds its shape. We love the sturdiness and reliability for prototyping and use these all the time in breadboards, perfboards, and in terminal blocks.

For wearables or projects where the wire-harness has to be able to deal with a lot of bending, check out our stranded-core wires.

Comes with one 25ft spool of gray wire. The wire is 22AWG solid-core with an outer diameter of 1.6mm.

Technical Details

Length: 25 feet / 7.6m

Outer Diameter: 1.6mm / 0.06"
