PU SERIES INSTALLATION & DIMENSIONS

Step 1 Tap motor shaft for 10-32 screw, 1/2" deep

Step 2 Remove cap from screw

Remove black dust cover

No other screws are necessary, as the cord will keep the unit from rotating. The PU gives a high signal when the North Pole in the magnet crosses the hall-effect transistor. The signal is switched off when the South Pole crosses the hall-effect transistor. The result is a square wave whose frequency is proportional to the speed of the shaft that the PU is mounted on. The number of North/South Pole pairs directly affects the output.

Step 4 Install and tighten PU assembly

PU bearing tapped flat motor washer 10-32 shaft screw 3/16" dust magnet spacer cover disc red wire +VDC (note: can be used on +5 through +24 black wire common volt power supply) white wire signal

Step 5 Secure black cover onto housing

If the motor is fan-cooled (TENV), remove the plug in the center of the fan guard before installing the pickup. Otherwise, damage to the pickup may occur.

Note:

shaft is already drilled and tapped.

If installing the unit on a motor purchased from Dart, the motor
