## 1 Introduction

The **USBC-FS-UART-5V-3.3V-1800-PH** is a USB Type C to TTL serial UART converter cable incorporating FT234XD USB to basic UART interface IC device which handles all the USB signalling and protocols. The cable provides a fast, simple way to connect devices with a TTL level serial interface to USB Type C.

USBC-FS-UART-5V-3.3V-1800-PH contains a small internal electronic circuit board, utilising the FT234XD, which is encapsulated into the USB Type C connector end of the cable. Refer to [DS\\_FT234XD](#), datasheet for details. The other end of the cable comes with 6-way SIL, 0.1" pitch connector – see Table 1.

The cable is FCC, CE, RoHS compliant and is available at TTL levels of +3.3V.

The USB Type C side of the cable is USB powered and USB 2.0 full speed compatible. The cable is 1.8m long and supports a data transfer rate up to 3 Mbaud.

The **USBC-FS-UART-5V-3.3V-1800-PH** requires USB drivers, available free from <https://www.ftdichip.com/FTDrivers.htm>, which are used to make the FT234XD in the cable appear as a virtual COM port (VCP). This then allows the user to communicate with the USB Type C interface via a standard PC serial emulation port (for example TTY). Another USB driver, the D2XX driver, can also be used with application software to directly access the FT234XD on the cable through a DLL. This is illustrated in the Figure 1-1.

### 3 FT234XD Features relevant to USBC-FS-UART-5V-3.3V-1800-PH

The USBC-FS-UART-5V-3.3V-1800-PH uses FTDI's FT234XD USB to serial IC device. This section summarises the key features of the FT234XD which apply to the USBC-FS-UART-5V-3.3V-1800-PH USB to serial TTL converter cables. For further details, and a full features and enhancements description, refer to [FT234XD](#) datasheet.

**Internal MTP MEMORY.** The internal MTP MEMORY in the cable is used to store USB Vendor ID (VID), Product ID (PID), device serial number, product description string and various other USB configuration descriptors. Each cable is supplied with the internal MTP MEMORY pre-programmed as described in Appendix A - Cable MTP MEMORY Configuration. A user area of the internal MTP MEMORY is available to system designers to allow storing additional data. The internal MTP MEMORY descriptors can be programmed in circuit, over USB without any additional voltage requirement. It can be programmed using the FTDI utility software called [FT\\_PROG](#), which can be downloaded from [FTDI Utilities](#).

**Lower Operating and Suspend Current.** The FT234XD has a low 8mA operating supply current and a very low USB suspend current of approximately 125µA. (Note that during suspend mode, the current drawn by an application should not exceed 2.5mA to remain USB compliant)

**UART Pin Signal Inversion.** The sense of each of the four UART signals can be individually inverted by configuring options in the internal MTP MEMORY. For example CTS# (active low) can be changed to CTS (active high), or TXD can be changed to TXD#.

**Improved EMI Performance.** The USBC-FS-UART-5V-3.3V-1800-PH is FCC and CE certified.

**Extended Operating Temperature Range** - The USBC-FS-UART-5V-3.3V-1800-PH are capable of operating over an extended temperature range of -40° C to +85° C thus allowing them to be used in automotive or industrial applications.

The USBC-FS-UART-5V-3.3V-1800-PH are terminated by a 6 way, 0.1", Single-In-Line (SIL) connector. The USBC-FS-UART-5V-3.3V-1800-PH operates at +3.3V levels (signals only, VCC= +5V).
