

CRD1615-8W

8 Watt Reference Design

Features

- Quasi-resonant Flyback with Constant-current Output
- Flicker-free Dimming
- Line Voltage 108VAC - 132VAC
- Rated Output Power: 7.5W
- Efficiency: ~82% at 250mA for 10×LEDs in Series
- Supports Cirrus Logic CS1615

General Description

The CRD1615-8W reference design demonstrates the performance of the CS1615 single stage dimmable AC/DC LED driver IC with a 250mA output driving 10×LEDs in series. It offers best-in-class dimmer compatibility with leading-edge, trailing-edge, and digital dimmers. The form factor is targeted to fit into many LED bulb applications (GU10, A19, PAR, BR).

DIMENSIONS (OVERALL)

Length	Width	Height
2.028" (51.5mm)	1.004" (25.5mm)	0.65" (16.5mm)

For more information, see Figure 3 on page 6.

IMPORTANT SAFETY INSTRUCTIONS

Read and follow all safety instructions prior to using this demonstration board.

This Engineering Evaluation Unit or Demonstration Board must only be used for assessing IC performance in a laboratory setting. This product is not intended for any other use or incorporation into products for sale.

This product must only be used by qualified technicians or professionals who are trained in the safety procedures associated with the use of demonstration boards.

DANGER Risk of Electric Shock

- The direct connection to the AC power line and the open and unprotected boards present a serious risk of electric shock and can cause serious injury or death. Extreme caution needs to be exercised while handling this board.
- Avoid contact with the exposed conductor or terminals of components on the board. High voltage is present on exposed conductor and it may be present on terminals of any components directly or indirectly connected to the AC line.
- Dangerous voltages and/or currents may be internally generated and accessible at various points across the board.
- Charged capacitors store high voltage, even after the circuit has been disconnected from the AC line.
- Make sure that the power source is off before wiring any connection. Make sure that all connectors are well connected before the power source is on.
- Follow all laboratory safety procedures established by your employer and relevant safety regulations and guidelines, such as the ones listed under, OSHA General Industry Regulations - Subpart S and NFPA 70E.

 **WARNING** Suitable eye protection must be worn when working with or around demonstration boards. Always comply with your employer's policies regarding the use of personal protective equipment.

 **WARNING** All components and metallic parts may be extremely hot to touch when electrically active.

Contacting Cirrus Logic Support

For all product questions and inquiries contact a Cirrus Logic Sales Representative. To find the one nearest to you go to www.cirrus.com

1. INTRODUCTION

The CS1615 is a 120VAC quasi-resonant flyback mode dimmable LED controller IC. The CS1615 uses a digital control algorithm that is optimized for high efficiency and >0.9 power factor over an input voltage range (108VAC to 132VAC). The CS1615 integrates a dimmer compatibility circuit with a constant output current, quasi-resonant flyback stage. An adaptive dimmer compatibility algorithm controls the dimmer compatibility operation mode to enable flicker-free operation from 0% to 100% output current with leading-edge, trailing-edge, and digital dimmers.

The CRD1615-8W board is optimized to deliver low system cost in a high-efficiency, flicker-free, phase-dimmable, solid-state lighting (SSL) solution for incandescent lamp replacement applications. The feedback loop is closed through an integrated digital control system within the IC. Protection algorithms such as output open/short, current-sense resistor open/short, and overtemperature thermistors protect the system during abnormal conditions. When using the CS1615 for a design that does not require active clamp circuitry, the CLAMP pin should be left floating. Details of these features are provided in the CS1615/16 data sheet DS961 *Single Stage Dimmable Offline AC/DC Controller for LED Lamps*.

The CRD1615-8W board demonstrates the performance of the CS1615. This reference board has been designed for an output load of 10×LEDs in series at 250mA (~28.0V typical).

This document provides the schematic for the board. It includes oscilloscope screen shots that indicate various operating waveforms. Graphs are also provided that document the performance of the board in terms of Efficiency vs. Line Voltage, Output Current vs. Line Voltage, and Output Current vs. Dim Angle for the CS1615 dimmable LED controller IC.

Extreme caution needs to be exercised while handling this board. This board is to be used by trained professionals only.

- Notes:
1. Tested at nominal input voltage, nominal input frequency and without a dimmer after soaking for 15 minutes
 2. Compliant with IEC 61000-3-2 Class C < 25W
 3. Average
 4. Peak-to-peak
 5. Measured with Chroma 66202 Power Analyzer

7. TRANSFORMER CONSTRUCTION

The CRD1615-8W provides power factor correction and dimmer compatibility with a constant output current, quasi-resonant flyback stage. The following sections describe the flyback transformer installed on the CRD1615-8W.

7.1 Flyback Transformer

The flyback transformer stage is a quasi-resonant peak current-regulated DC-DC converter capable of delivering the highest possible efficiency with constant current output while minimizing line frequency ripple. The auxiliary winding is used for zero-current detection and overvoltage protection.

Figure 10. Flyback Transformer Schematic

7.1.1 Electrical Specifications

Characteristics conditions:

- Operating temperature range: -25 °C to +120 °C (including coil heat)

Parameter	Condition	Symbol	Min	Typ	Max	Unit
Flyback Transformer						
Electrical Strength	(Note 1) $f_{operate}=50/60\text{Hz}$		-	3.75	-	kV _{RMS}
Primary Inductance	(Note 2) $f_{resonant}=10\text{kHz}$, 0.3V at 20°C	L_P	2.34	2.6	2.86	mH
Primary Leakage Inductance	(Note 2) $f_{resonant}=10\text{kHz}$, 0.3V at 20°C	L_K	-	-	55	μH
Primary DC Resistance	(Note 2) $t_{DCR}=20^\circ\text{C}$		4.64	5.8	6.96	Ω
Secondary DC Resistance	(Note 3) $t_{DCR}=20^\circ\text{C}$		0.208	0.26	0.312	mΩ
Auxiliary DC Resistance	(Note 4) $t_{DCR}=20^\circ\text{C}$		0.44	0.55	0.66	mΩ

- Notes:
1. Time = 2sec.
 2. Measured across pins 4 and 5.
 3. Measured across pins B and A.
 4. Measured across pins 12 and 7.
