

## 32-Channel High-Voltage Sample-and-Hold Amplifier Array

### Features

- Thirty-two Independent High-voltage Amplifiers
- 300V Operating Voltage
- 295V Output Voltage
- 2.2V/ $\mu$ s Typical Output Slew Rate
- Adjustable Output Current Source Limit
- Adjustable Output Current Sink Limit
- Internal Closed-loop Gain of 72V/V
- 12 M $\Omega$  Feedback Impedance
- Layout Ideal for Die Applications

### Applications

- Microelectromechanical Systems (MEMS) Driver
- Piezoelectric Transducer Driver
- Optical Crosspoint Switches  
(Using MEMS Technology)

### General Description

The HV257 is a 32-channel, high-voltage sample-and-hold amplifier array integrated circuit. It operates on a single high-voltage supply, up to 300V, and two low-voltage supplies,  $V_{DD}$  and  $V_{NN}$ .

All 32 sample-and-hold circuits share a common analog input,  $V_{SIG}$ . The individual sample-and-hold circuits are selected by a five-to-32 logic decoder. The sampled voltage on the holding capacitor is buffered by a low-voltage amplifier and is magnified by a high-voltage amplifier with a closed-loop gain of 72V/V. The internal closed-loop gain is set for an input voltage range of 0V to 4.096V. The input voltage can be up to 5V, but the output will saturate. The maximum output voltage swing is 5V below the  $V_{PP}$  high-voltage supply. The outputs can drive capacitive loads of up to 3000 pF.

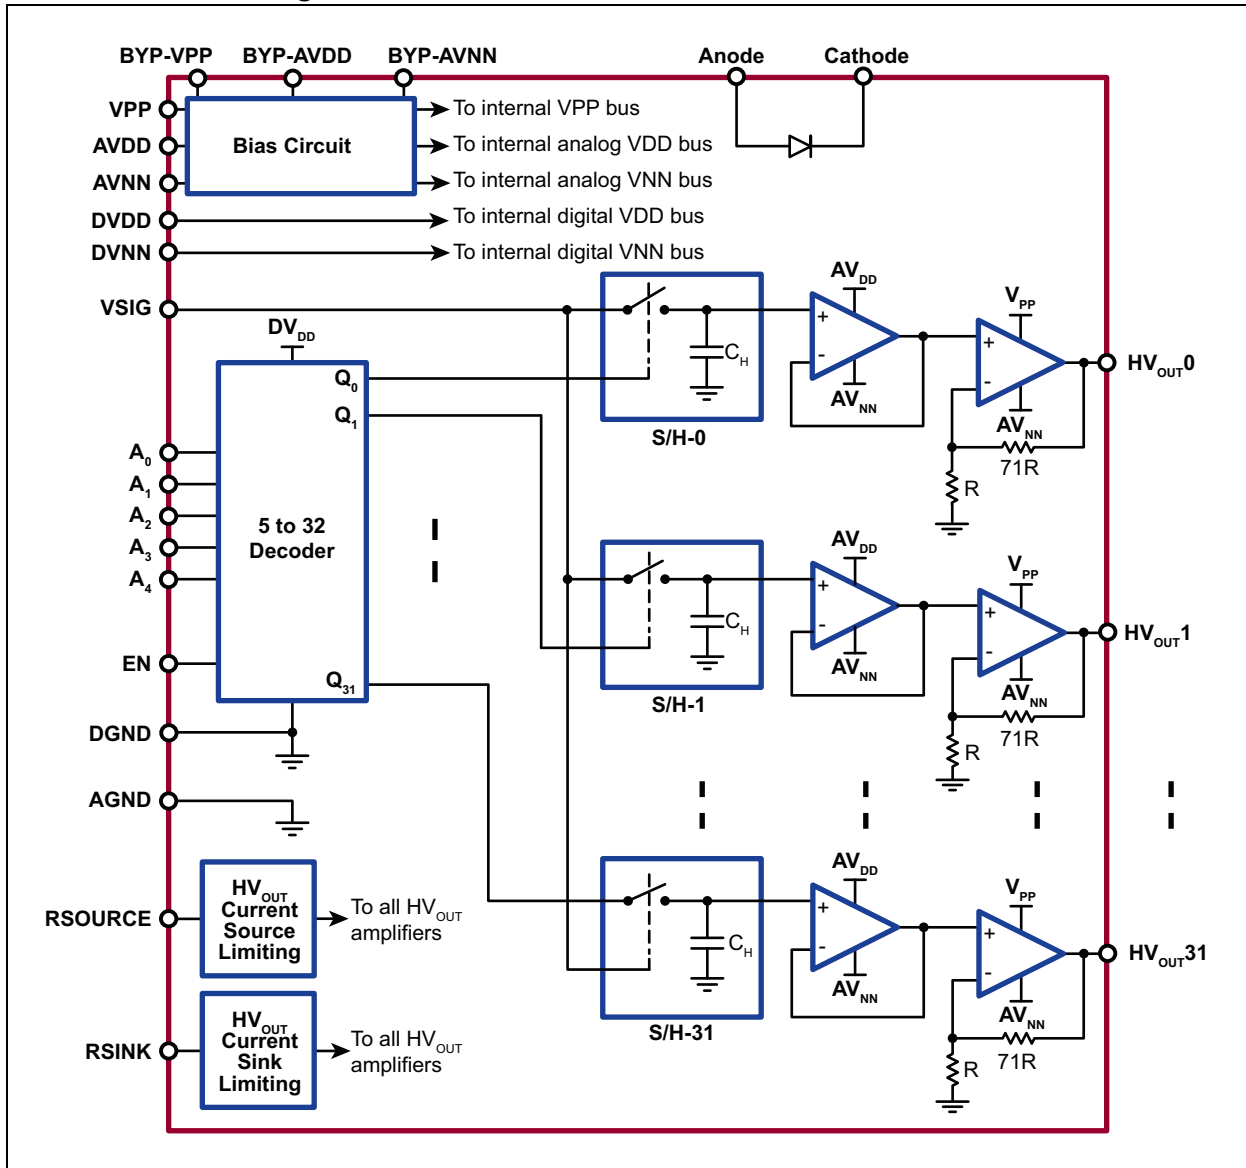

The maximum output source and sink current can be adjusted by using two external resistors. An external  $R_{SOURCE}$  resistor controls the maximum sourcing current, and an external  $R_{SINK}$  resistor controls the maximum sinking current. The current limit is approximately 12.5V divided by the external resistor value. The setting is common for all 32 outputs. A low-voltage silicon junction diode is made available to help monitor the die temperature.

### Package Type

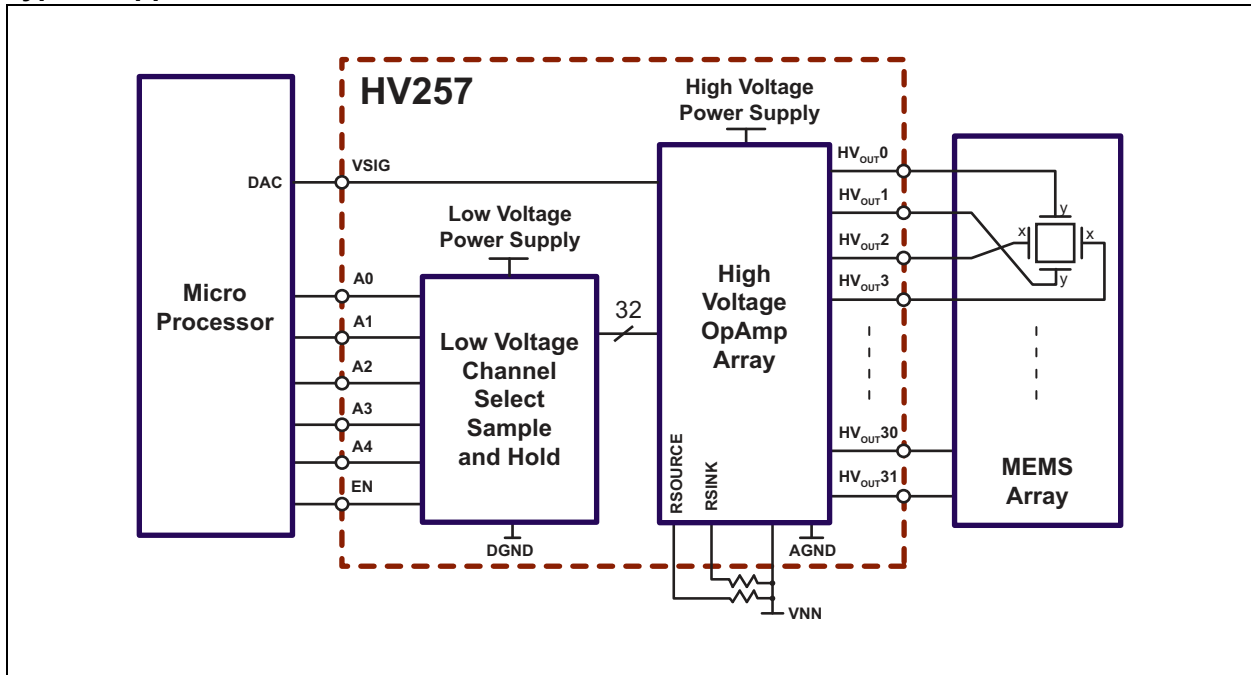

# HV257

## Functional Block Diagram

## Typical Application Circuit

# HV257

## 1.0 ELECTRICAL CHARACTERISTICS

### Absolute Maximum Ratings†

High-voltage Supply, $V_{PP}$ .....	310V
Analog Low-voltage Positive Supply, $AV_{DD}$ .....	8V
Digital Low-voltage Positive Supply, $DV_{DD}$ .....	8V
Analog Low-voltage Negative Supply, $AV_{NN}$ .....	-7V
Digital Low-voltage Negative Supply, $DV_{NN}$ .....	-7V
Logic Input Voltage .....	-0.5V to $DV_{DD}$
Analog Input Signal, $V_{SIG}$ .....	0V to 6V
Maximum Junction Temperature, $T_J$ .....	150°C
Storage Temperature, $T_S$ .....	-65°C to +150°C

† **Notice:** Stresses above those listed under “Absolute Maximum Ratings” may cause permanent damage to the device. This is a stress rating only, and functional operation of the device at those or any other conditions above those indicated in the operational sections of this specification is not intended. Exposure to maximum rating conditions for extended periods may affect device reliability.

### RECOMMENDED OPERATING CONDITIONS

Parameter	Sym.	Min.	Typ.	Max.	Unit	Conditions
High-voltage Positive Supply	$V_{PP}$	125	—	300	V	
Low-voltage Positive Supply	$V_{DD}$	6	—	7.5	V	
Low-voltage Negative Supply	$V_{NN}$	-4.5	—	-6.5	V	
$V_{PP}$ Supply Current	$I_{PP}$	—	—	0.8	mA	$V_{PP} = 300V$ , All $HV_{OUT} = 0V$ , No load
$V_{DD}$ Supply Current	$I_{DD}$	—	—	5	mA	$V_{DD} = 6V$ to $7.5V$
$V_{NN}$ Supply Current	$I_{NN}$	-6	—	—	mA	$V_{NN} = -4.5V$ to $-6.5V$
Operating Temperature Range	$T_J$	-10	—	85	°C

## 4.0 FUNCTIONAL DESCRIPTION

### 4.1 Power-up/Power-down Sequence

#### 4.1.1 EXTERNAL DIODE PROTECTION

The device can be damaged due to improper power-up/power-down sequence. To avoid this, please follow the acceptable power-up/power-down sequences in [Table 4-1](#) and [Table 4-2](#) and add two external diodes as shown in [Figure 4-1](#). The first diode is a high-voltage diode across  $V_{PP}$  and  $V_{DD}$  where the anode of the diode is connected to  $V_{DD}$  and the cathode of the diode is connected to  $V_{PP}$ . Any low-current high-voltage diode such as a 1N4004 will be adequate. The second diode is a Schottky diode across  $V_{NN}$  and  $D_{GND}$  where the anode of the Schottky diode is connected to  $V_{NN}$  and the cathode is connected to  $D_{GND}$ . Any low-current Schottky diode such as a 1N5817 will be sufficient.

**FIGURE 4-1:** Diode Configuration.

#### 4.1.2 RECOMMENDED POWER-UP/POWER-DOWN SEQUENCE

The HV257 needs all power supplies to be fully up and all channels refreshed with  $V_{SIG} = 0V$  to force all high-voltage outputs to 0V. Before that time, the high-voltage outputs may have temporary voltage excursions above or below GND level, depending on selected power-up sequence. To minimize the excursions, the  $V_{DD}$  and  $V_{NN}$  power supplies should be applied at the same time (or within a few nanoseconds). In addition, all channels should be continuously refreshed with  $V_{SIG} = 0V$ , just before, and while the  $V_{PP}$  is ramping up. The suggested  $V_{PP}$  ramp up speed should be 10 milliseconds or longer and the ramp-down should be 1 millisecond or longer.

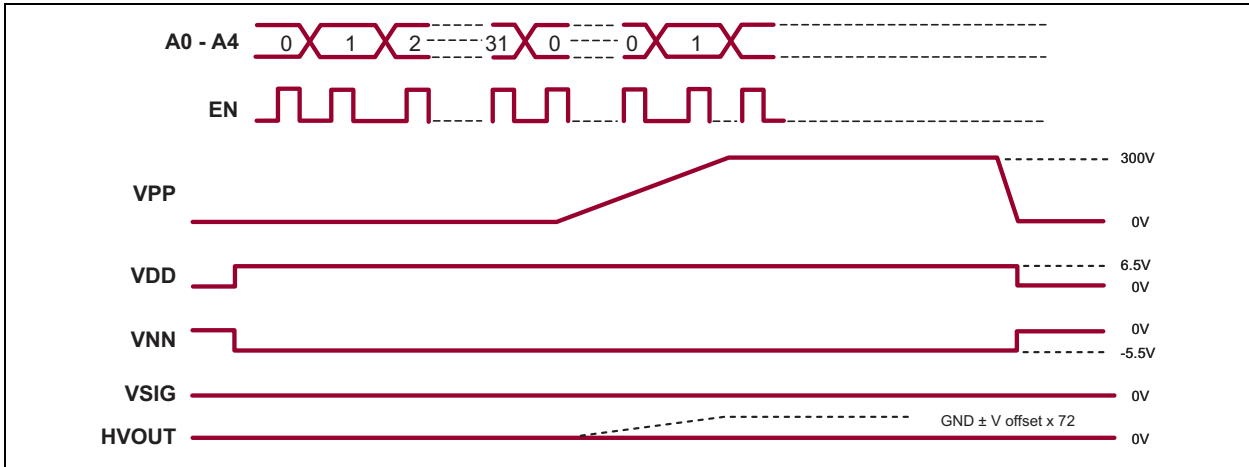

**TABLE 4-1: ACCEPTABLE POWER-UP SEQUENCES**

Option 1		Option 2		Option 3	
Step	Description	Step	Description	Step	Description
1	$V_{PP}$	1	$V_{NN}$	1	$V_{DD}$ and $V_{NN}$
2	$V_{NN}$	2	$V_{DD}$	2	Inputs
3	$V_{DD}$	3	$V_{PP}$	3	$V_{PP}$

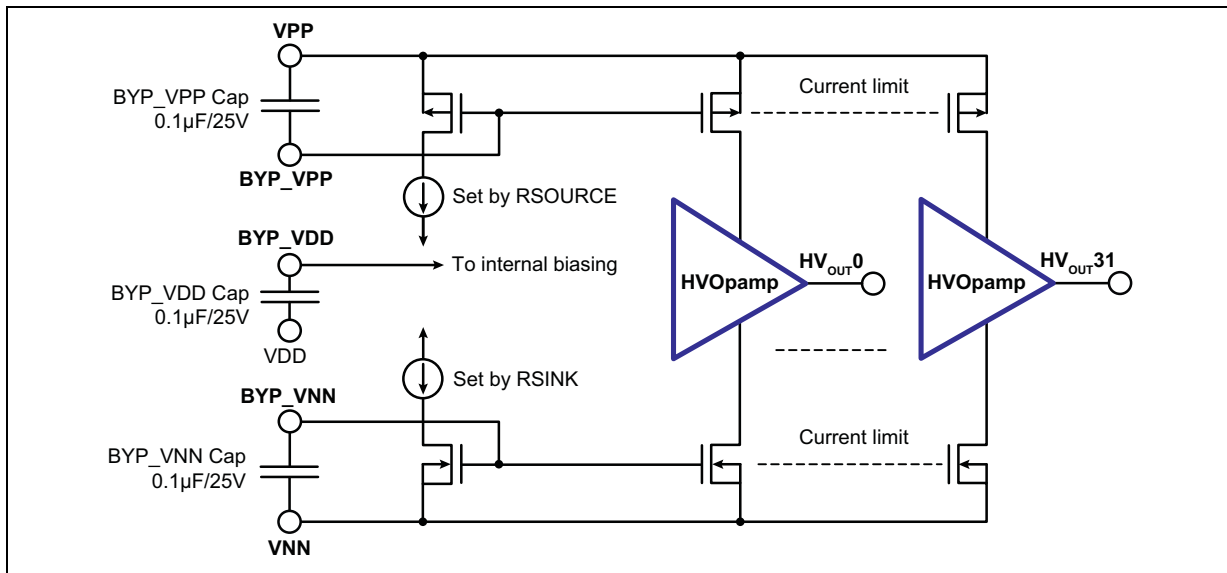

**FIGURE 4-3:**  $HV_{OUT}$  Level at Power-up.

# HV257

## 4.2 $R_{SINK}/R_{SOURCE}$

The  $V_{DD\_BYP}$ ,  $V_{DD\_BYP}$  and  $V_{NN\_BYP}$  pins are internal high-impedance-current mirror gate nodes brought out to maintain stable opamp biasing currents in noisy power supply environments. When  $0.1\ \mu\text{F}/25\text{V}$  bypass capacitors are added between  $V_{PP\_BYP}$  and  $V_{PP}$ , between  $V_{DD\_BYP}$  and  $V_{DD}$  and between  $V_{NN\_BYP}$  and  $V_{NN}$ , they will force the high-impedance gate nodes to follow the fluctuation of power lines. The expected voltages at the  $V_{DD\_BYP}$  and  $V_{NN\_BYP}$  pins are typically 1.5V from their respectful power supply. The expected voltage at  $V_{PP\_BYP}$  is typically 3V below  $V_{PP}$ .

**FIGURE 4-4:** Internal Reference Current Diagram.

## 4.3 Ground Isolation (AGND/DGND Isolation)

It is important that the AGND pin is connected to a clean ground. The hold capacitors are internally connected to the AGND, and any ground noise will directly couple to the high-voltage outputs (with a gain of 72). The analog and digital ground traces on the PCB should be physically separated to reduce digital switching noise, degrading the signal to noise performance.

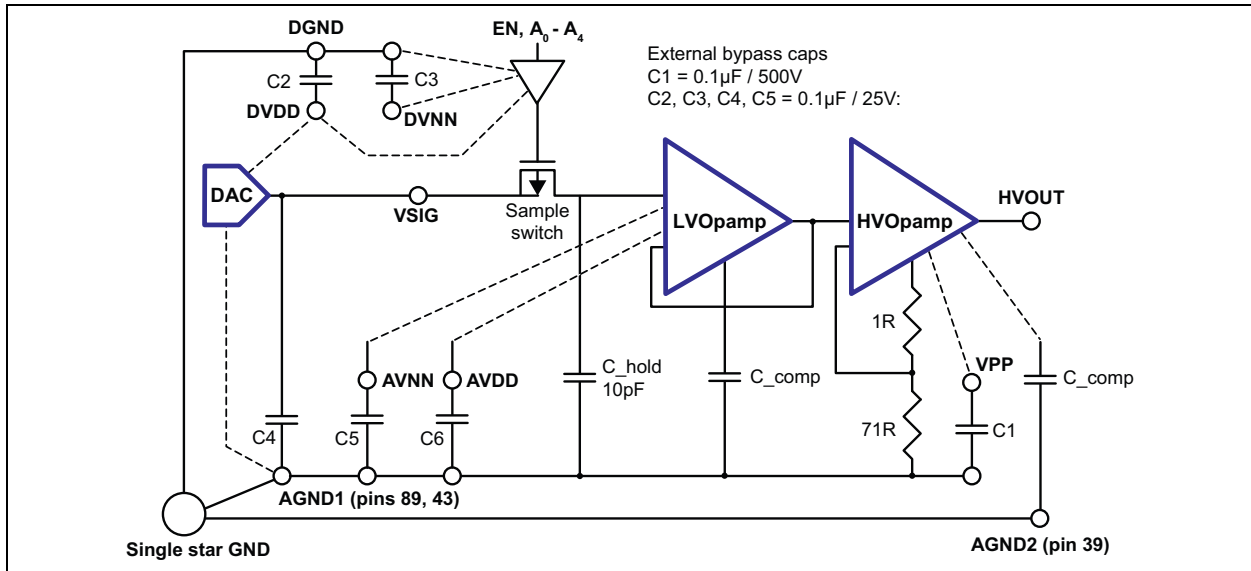

FIGURE 4-5: AGND/DGND Ground Isolation.

## 5.0 PACKAGE MARKING INFORMATION

### 5.1 Packaging Information

<b>Legend:</b>	XX...X	Product Code or Customer-specific information
	Y	Year code (last digit of calendar year)
	YY	Year code (last 2 digits of calendar year)
	WW	Week code (week of January 1 is week '01')
	NNN	Alphanumeric traceability code
	Ⓔ3	Pb-free JEDEC® designator for Matte Tin (Sn)
	*	This package is Pb-free. The Pb-free JEDEC designator (Ⓔ3) can be found on the outer packaging for this package.
<b>Note:</b>	In the event the full Microchip part number cannot be marked on one line, it will be carried over to the next line, thus limiting the number of available characters for product code or customer-specific information. Package may or not include the corporate logo.	

## 100-Lead MQFP Package Outline (FG)

20.00x14.00mm body, 3.15mm height (max), 0.65mm pitch, 3.20mm footprint

Note: For the most current package drawings, see the Microchip Packaging Specification at [www.microchip.com/packaging](http://www.microchip.com/packaging).

**Note:**

1. A Pin 1 identifier must be located in the index area indicated. The Pin 1 identifier can be: a molded mark/identifier; an embedded metal marker; or a printed indicator.

JEDEC Registration MS-022, Variation GC-2, Issue B, Dec. 1996.

\* This dimension is not specified in the JEDEC drawing.

Drawings are not to scale.

# HV257

---

NOTES:

## APPENDIX A: REVISION HISTORY

### Revision A (September 2017)

- Converted Supertex Doc# DSFP-HV257 to Microchip DS20005827A
- Changed the part marking format
- Made minor text changes throughout the document

# HV257

## PRODUCT IDENTIFICATION SYSTEM

To order or obtain information, e.g., on pricing or delivery, contact your local Microchip representative or sales office.

<u>PART NO.</u>	<u>XX</u>	-	<u>X</u>	-	<u>X</u>
Device	Package Options		Environmental		Media Type
Device:	HV257	=	32-Channel High-Voltage Sample-and-Hold Amplifier Array		
Package:	FG	=	100-lead MQFP		
Environmental:	G	=	Lead (Pb)-free/RoHS-compliant Package		
Media Type:	(blank)	=	66/Tray for a K6 Package		

**Example:**

a) HV257FG-G: 32-Channel High-Voltage Sample-and-Hold Amplifier Array, 100-lead MQFP, 66/Tray

---

**Note the following details of the code protection feature on Microchip devices:**

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as “unbreakable.”

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.

Information contained in this publication regarding device applications and the like is provided only for your convenience and may be superseded by updates. It is your responsibility to ensure that your application meets with your specifications. MICROCHIP MAKES NO REPRESENTATIONS OR WARRANTIES OF ANY KIND WHETHER EXPRESS OR IMPLIED, WRITTEN OR ORAL, STATUTORY OR OTHERWISE, RELATED TO THE INFORMATION, INCLUDING BUT NOT LIMITED TO ITS CONDITION, QUALITY, PERFORMANCE, MERCHANTABILITY OR FITNESS FOR PURPOSE. Microchip disclaims all liability arising from this information and its use. Use of Microchip devices in life support and/or safety applications is entirely at the buyer's risk, and the buyer agrees to defend, indemnify and hold harmless Microchip from any and all damages, claims, suits, or expenses resulting from such use. No licenses are conveyed, implicitly or otherwise, under any Microchip intellectual property rights unless otherwise stated.

*Microchip received ISO/TS-16949:2009 certification for its worldwide headquarters, design and wafer fabrication facilities in Chandler and Tempe, Arizona; Gresham, Oregon and design centers in California and India. The Company's quality system processes and procedures are for its PIC® MCUs and dsPIC® DSCs, KEELOQ® code hopping devices, Serial EEPROMs, microperipherals, nonvolatile memory and analog products. In addition, Microchip's quality system for the design and manufacture of development systems is ISO 9001:2000 certified.*
