

# SY89854U

## Precision Low Power 1:4 LVPECL Fanout Buffer/Translator with Internal Termination

### General Description

The SY89854U is a 2.5V/3.3V precision, high-speed, fully differential 1:4 LVPECL fanout buffer. Optimized to provide four identical output copies with less than 20ps of skew and less than 10ps<sub>(pp)</sub> total jitter, the SY89854U can process clock signals as fast as 2GHz.

The differential input includes Micrel's unique, patent pending 3-pin input termination architecture that interfaces to any differential signal (AC or DC-coupled) as small as 100mV (200mV<sub>pp</sub>) without any level shifting or termination resistor networks in the signal path. For AC-coupled input interface applications, an on-board output reference voltage (VREF-AC) is provided to bias the center-tap (VT) pin. The outputs are 800mV LVPECL, with fast rise/fall times guaranteed to be less than 180ps.

The SY89854U operates from a 2.5V  $\pm$ 5% supply or a 3.3V  $\pm$ 10% supply and is guaranteed over the full industrial temperature range of  $-40^{\circ}\text{C}$  to  $+85^{\circ}\text{C}$ . The SY89854U is part of Micrel's high-speed, Precision Edge<sup>®</sup> product line.

### Features

- Precision 1:4, LVPECL fanout buffer
- Low power: 137mW (2.5V typ)
- Guaranteed AC performance over temperature and supply voltage:
  - DC- to > 2GHz Clock  $f_{\text{MAX}}$
  - <340ps  $t_{\text{pd}}$
  - <180ps  $t_r/t_f$  time
  - <20ps max. skew
- Ultra-low jitter design:
  - <1ps<sub>(rms)</sub> random jitter
  - <10ps<sub>(pp)</sub> deterministic jitter
  - <10ps<sub>(pp)</sub> total jitter (clock)
- Unique patent pending input termination and VT pin accepts DC-coupled and AC-coupled inputs (CML, PECL, LVDS)
- Typical 800mV (100k) LVPECL output swing
- Power supply 2.5V  $\pm$ 5% or 3.3V  $\pm$ 10%
- Industrial temperature range  $-40^{\circ}\text{C}$  to  $+85^{\circ}\text{C}$
- Available in ultra-small (3mm x 3mm) 16-pin QFN package

### Typical Applications

United States Patent No. RE44,134

Precision Edge is a registered trademark of Micrel, Inc.

### Applications

- SONET and All GigE clock distribution
- Fibre Channel clock and data distribution
- Backplane distribution

## Ordering Information<sup>(1)</sup>

Part Number	Package Type	Operating Range	Package Marking	Lead Finish
SY89854UMG	QFN-16	Industrial	854U with Pb-free bar-line indicator	Pb-Free NiPdAu
SY89854UMGTR <sup>(2)</sup>	QFN-16	Industrial	854U with Pb-free bar-line indicator	Pb-Free NiPdAu

**Notes:**

- Contact factory for die availability. Dice are guaranteed at  $T_A = 25^\circ\text{C}$ , DC Electricals Only.
- Tape and Reel.

## Pin Configuration

16-Pin QFN

## Pin Description

Pin Number	Pin Name	Pin Function
1, 4	IN, /IN	Differential Input: This input pair is the signal to be buffered. These inputs accept AC- or DC-coupled differential signals as small as 100mV (200mV <sub>PP</sub> ). Each pin of this pair internally terminates to a VT pin through 50Ω. Note that this input will default to an indeterminate state if left open. Please refer to the "Input Interface Applications" section for more details.
2	VT	Input Termination Center-Tap: Each side of the differential input pair terminates to this pin. The VT pin provides a center-tap to a termination network for maximum interface flexibility. See "Input Interface Applications" section for more details.
8,13	VCC	Positive Power Supply. Bypass with 0.1μF  0.01μF low ESR capacitors as close to the VCC pin as possible.
15, 14 12, 11 10, 9 7, 6	Q0, /Q0 Q1, /Q1 Q2, /Q2 Q3, /Q3	Differential 100K LVPECL Output: These LVPECL outputs are the precision, low skew copies of the input signal. Terminate with 50Ω to V <sub>CC</sub> -2V. Unused output pairs may be left floating with no impact on jitter. See "Output Interface Applications" section.
5, 16	GND, Exposed Pad	Ground. Ground pin and exposed pad must be connected to the same ground plane.
3	VREF-AC	Reference Voltage: This output biases to V <sub>CC</sub> -1.2V. It is used when AC coupling the inputs (IN, /IN). Connect V <sub>REF-AC</sub> to the VT pin. Bypass VREF-AC pin with a 0.01μF low ESR capacitor to V <sub>CC</sub> . Maximum sink/source capability is 1.5mA. See "Input Interface Applications" section for more details.

**Notes:**

1. Permanent device damage may occur if the Absolute Maximum Ratings are exceeded. This is a stress rating only and functional operation is not implied at conditions other than those detailed in the operational sections of this data sheet. Exposure to Absolute Maximum Ratings conditions for extended periods may affect device reliability.
2. The data sheet limits are not guaranteed if the device is operated beyond the operating ratings.
3. Due to the limited drive capability use for input of the same package only.
4. Package thermal resistance assumes exposed pad is soldered (or equivalent) to the devices most negative potential on the PCB.  $\theta_{JA}$  and  $\psi_{JB}$  are calculated based on a 4-layer board in still air, unless otherwise stated.
5. The circuit is designed to meet the DC specifications shown in the above table after thermal equilibrium has been established.
6.  $V_{IH}$  (min) not lower than 1.2V.

### Notes:

8. High-frequency AC-parameters are guaranteed by design and characterization.
9. Output-to-output skew is measured between outputs under identical conditions.
10. Part-to-part skew is defined for two parts with identical power supply voltages at the same temperature and with no skew of the edges at the respective inputs. Part-to-part skew includes variation in  $t_{pd}$ .
11. Random jitter is measured with a K28.7 character pattern, measured at 2.5Gbps.
12. DJ is measured at 2.5Gbps, with both K28.5 and  $2^{23} - 1$  PRBS pattern.
13. Cycle-to-cycle jitter definition: The variation of periods between adjacent cycles,  $T_n - T_{n-1}$  where T is the time between rising edges of the output signal.
14. Total jitter definition: with an ideal clock input of frequency  $< f_{MAX}$ , no more than one output edge in  $10^{12}$  output edges will deviate by more than the specified peak-to-peak jitter value.
