

PE45361

Document Category: Product Specification

UltraCMOS® Power Limiter, 10 MHz–8 GHz

Features

- Monolithic drop-in solution with no external bias components
- Adjustable low power limiting threshold from +7 dBm to +13 dBm
- High maximum power handling of 50 dBm, 100W pulsed
- Positive threshold control from +0V to +0.3V
- Fast response time of less than 1 ns
- Packaging – 12-lead 3 × 3 × 0.5 mm QFN

Applications

- Wireless infrastructure transceivers and antennas
- Test and measurement (T&M)

Product Description

The PE45361 is a HaRP™ technology-enhanced power limiter designed for use in high performance power limiting applications in test and measurement equipment and wireless infrastructure transceivers and antennas.

Unlike traditional PIN diode solutions, the PE45361 achieves an adjustable input 1dB compression point or limiting threshold via a low current control voltage (V_{CTRL}), eliminating the need for external bias components such as DC blocking capacitors, RF choke inductors and bias resistors.

It delivers low insertion loss and high linearity under non-limiting power levels and extremely fast response time in a limiting event, ensuring protection of sensitive circuitry. It also offers excellent ESD rating and ESD protection.

The PE45361 is manufactured on pSemi's UltraCMOS® process, a patented advanced form of silicon-on-insulator (SOI) technology, offering the performance of GaAs with the economy and integration of conventional CMOS.

Absolute Maximum Ratings

Exceeding absolute maximum ratings listed in **Table 1** may cause permanent damage. Operation should be restricted to the limits in **Table 2**. Operation between operating range maximum and absolute maximum for extended periods may reduce reliability.

ESD Precautions

When handling this UltraCMOS device, observe the same precautions as with any other ESD-sensitive devices. Although this device contains circuitry to protect it from damage due to ESD, precautions should be taken to avoid exceeding the rating specified in **Table 1**.

Latch-up Immunity

Unlike conventional CMOS devices, UltraCMOS devices are immune to latch-up.

Table 3 ■ PE45361 Electrical Specifications (Cont.)

Parameter	Condition	Min	Typ	Max	Unit
Notes: 1) Measured with +30 dBm CW applied at input. 2) This mode requires the control voltage to toggle between +3.0V and 0V. At +3.0V, the limiter equivalent circuit is a low impedance to ground, reflecting most of the incident power back to the source. 3) State change is V _{CTRL} toggle from 0V to +3.0V. 4) Pulsed, 1% duty cycle of 10 μs pulse width in 1 ms period, 50Ω @ +25 °C.					

Thermal Data

Psi-JT (Ψ_{JT}), junction top-of-package, is a thermal metric to estimate junction temperature of a device on the customer application PCB (JEDEC JESD51-2).

$$\Psi_{JT} = (T_J - T_T)/P$$

where

Ψ_{JT} = junction-to-top of package characterization parameter, °C/W

T_J = die junction temperature, °C

T_T = package temperature (top surface, in the center), °C

P = power dissipated by device, Watts

Table 4 ■ Thermal Data for PE45361

Parameter	Typ	Unit
Ψ_{JT}	35	°C/W
Θ_{JA} , junction-to-ambient thermal resistance	73	°C/W

Power De-rating Curve

Figure 2 shows the power de-rating curve indicating maximum allowable operating RF input power (CW) up to the part’s maximum operating ambient temperature of +105 °C. This RF input power maintains the maximum operating junction temperature requirement of +150 °C.

Dual Mode Operation

Power Limiting Mode

The PE45361 performs as a linear power limiter with adjustable P1dB/limiting threshold. The P1dB/limiting threshold can be adjusted by changing the control voltage between 0V and +0.3V. If unbiased, or if $V_{CTRL} = 0V$, the PE45361 still offers power limiting protection.

Power Reflecting Mode

Power reflecting mode requires a power detector to sample the RF input power and a microcontroller to toggle the limiter control voltage between +3.0V and 0V based on the system protection requirements. At +3.0V, the limiter impedance to ground is less than 1Ω and most of the incident power will be reflected back to the source. At 0V, the device operates as in power limiting mode.

Typical Performance Data

Evaluation Kit

The power limiter evaluation kit board (EVB) was designed to ease customer evaluation of pSemi's PE45361. The uni-directional RF input and output are connected to the RF1 and RF2 port through a 50Ω transmission line via SMA connectors J2 and J3. A through 50Ω transmission line is available via SMA connectors J5 and J6. This transmission line can be used to estimate the loss of the PCB over the environmental conditions being evaluated. The 2-pin connector J4 is connected to the external bias V_{CTRL} .

The board is constructed of a four metal layer material with a total thickness of 62 mils. The top RF layer is Rogers RO4350B material with a 6.6 mil RF core and $\epsilon_R = 3.66$. The middle layers provide ground for the transmission lines. The transmission lines were designed using a coplanar waveguide with ground plane model using a trace width of 13.5 mils, trace gaps of 10 mils, and metal thickness of 2.1 mils.

Pin Information

This section provides pinout information for the PE45361. **Figure 19** shows the pin map of this device for the available package. **Table 5** provides a description for each pin.

Figure 19 ▪ Pin Configuration (Top View)

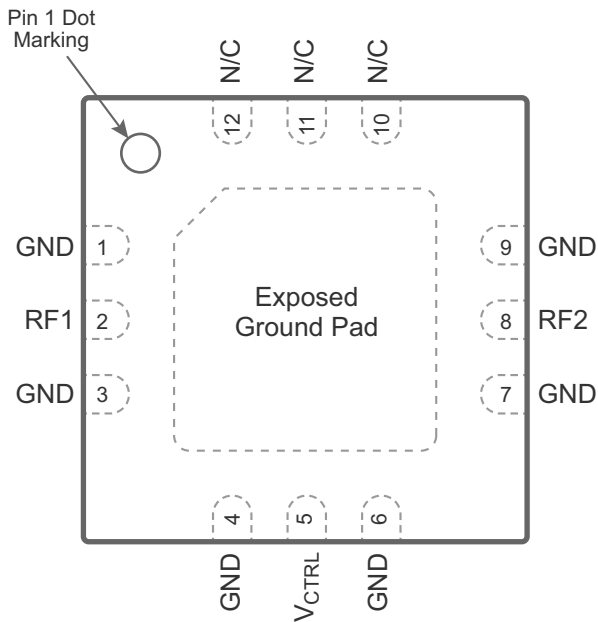

Table 5 ▪ Pin Descriptions for PE45361

Pin No.	Pin Name	Description
1, 3, 4, 6, 7, 9	GND	Ground
2	RF1 ⁽¹⁾⁽³⁾	RF port 1
5	V _{CTRL}	Control voltage
8	RF2 ⁽¹⁾⁽³⁾	RF port 2
10–12	N/C ⁽²⁾	No connect
Pad	GND	Exposed pad: ground for proper operation

Notes:

- 1) RF pins 2 and 8 must be at 0 VDC. The RF pins do not require DC blocking capacitors for proper operation if the 0 VDC requirement is met.
- 2) Pins 10–12 can be grounded if deemed necessary by the customer.
- 3) The limiter is not bi-directional. RF1 is the RF input and RF2 is the RF output.

Packaging Information

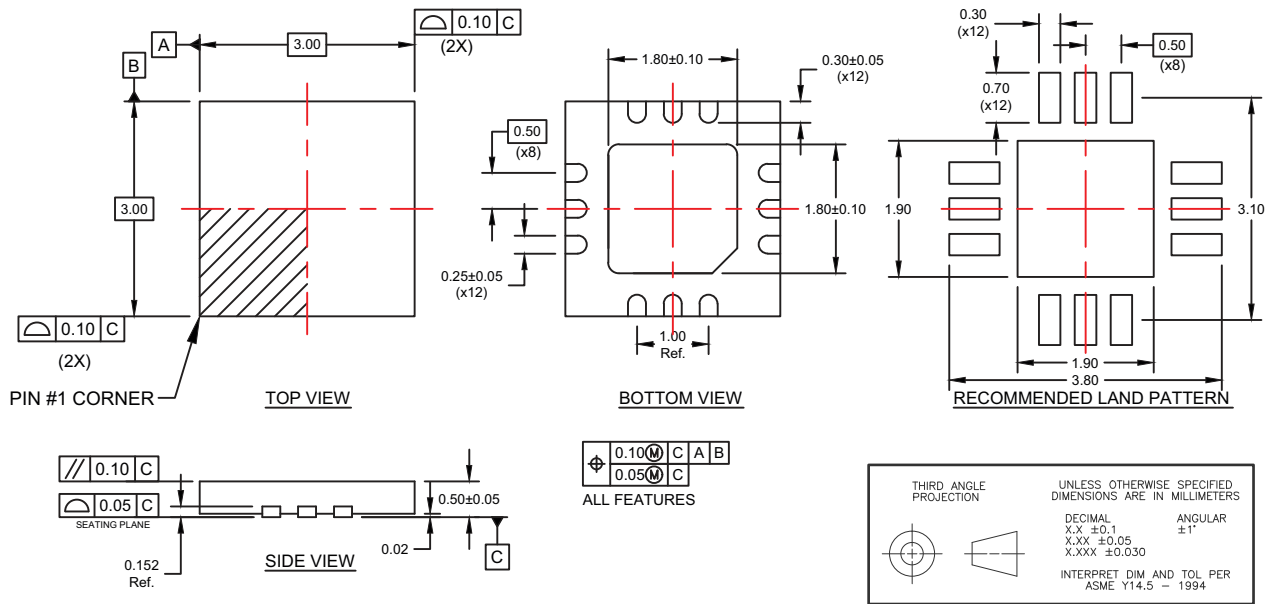

This section provides packaging data including the moisture sensitivity level, package drawing, package marking and tape-and-reel information.

Moisture Sensitivity Level

The moisture sensitivity level rating for the PE45361 in the 12-lead 3 × 3 × 0.5 mm QFN package is MSL1.
