Notes:

1. R_{min} = Minimum resistance of device in initial (un-soldered) state
2. V_{max} = Maximum voltage device can withstand without damage at rated current (I_{max})
3. I_{max} = Maximum fault current device can withstand without damage at rated voltage (V_{max})
4. I_{hold} = Hold current: maximum current device will pass without tripping in 25°C still air. Values specified using PCB's with 0.004" x 1.0 ounce copper traces
5. Time to trip values specified using PCB's with 0.004" x 1.0 ounce copper traces
6. With LOCTITE ECCOBOND UF 3915, curing condition: 140°C/20mins, resistance is measured 12 hours post coating curing process
