Wiring channel cutter PPS CD M

The PPS CD M is the ideal cutting tool for cutting wiring channels and covers up to a width of 125 mm to length, burr-free and non-cutting. An outstanding feature is the simple handling, whereby the spring-mounted knife protection provides the necessary safety for the application.

With the aid of a stop, the exact length of the wiring channels to be cut is set on the 1 m long metric measuring bar. The engraved millimeter range is permanently protected against wear.

With the aid of the lever rod, standard plastic profiles with a wall thickness of up to 2.5 mm can be cut with a minimum of effort and within seconds. When the device is mounted on a firm surface, the fixing facilities on the wiring channel cutter and on the length stop provide the necessary stability.

Wiring channel cutter PPS CD M
