PD30CTRR60BPxxIO - IO-Link

Photoelectric Retro-reflective sensors with IO-Link communication

Benefits

- **Retro-reflective** sensor with IO-Link with a adjustable distance of 1.7 to 6 m, either by trimmer or via IO-Link.
- **Application functions:** Pattern Recognition, Speed & Length, Divider function and Object & Gap Monitoring.
- **Neighbour Immunity**, selectable up to 3 sensors
- **Easy customization** to specific OEM requests by use of the build in IO-Link functionalities.
- **The output can be operated** either as a standard switching output or in IO-Link mode.
- **Fully configurable via output IO-Link v 1.1.** Electrical outputs can be configured as PNP / NPN / Push-Pull / External input, normally open or normally closed.
- **Timer functions** can be set, such as ON-delay, Off-delay, and one shots.
- **Logging functions:** Temperatures, detecting counter, power cycles and operating hours.
- **Detection modes** Single point, two point and windows mode.
- **Logic functions:** AND, OR, XOR and Gated SR-FF.
- **Analogue output:** In IO-Link mode the sensor will generate 16 bit analogue process data output representing various selectable process data such as received signal level.

Description

The PD30CTRR60BPxxIO are a part of the latest generation of high performance photoelectric sensors designed to solve most detection tasks due to the new IO-Link features.

The sensors are implemented in the compact 10 x 20 x 30 mm ABS housing that are acknoledged world wide.

New implemented functions with weight on functionality, reliability, Predictive maintenance make these sensors ideal for Industry 4.0.

Applications

Pattern Recognition: An easy way to verify that a product is manufactured to the specification e.g. Furniture production where tabs or holes has to be with a defined pattern.

Speed and Length: Monitor the speed and length of an object on a conveyour for e.g. sorting on size.

Divider function: A de-central counting function that gives a signal when a preset count level is reached e.g. when a certain items are packed in a carton box it ask for a new box.

Object and Gap Monitoring: Function that can sort out good objects and gaps between them so e.g. a packaging machine only reveive objects with the correct size and gaps.

Main functions

- Detects presence or absence of objects that cut off the light from the emitter
- Detects all opaque objects very reliably
- The sensor can be operated in IO-Link mode once connected to an IO-Link master or in standard I/O mode.
- Received light intensity as process data.

- Neighbor inference protection.
- Sensing distance by potentiometer, teach by wire or by IO-link parameter.
- Quality of Run and Quality of Teach result.
- Temperature date for preventive maintenance.
- Front-end check for preventive maintenance.

Adjustable parameters via IO-Link interface:
- Sensing distance and hysteresis.
- Sensing modes: single point or two point or window mode.
- Timer functions, e.g.: On-delay, Off delay, One shot leading edge or trailing edge.
- Logic functions such as: AND, OR, X-OR and SR-FF.
- External input.
- Logging functions: Maximum temperatures, minimum temperatures, operating hours, operating cycles, power cycles, minutes above maximum temperature, minutes below minimum temperature, etc.
- Auto hysteresis
- Special functions: Pattern Recognition, Speed & Length, Divider function and Object & Gap Monitoring.

Pattern Recognition

Function description	The Pattern recognition function detects a pattern (e.g. a row of holes or pins) and compare the order with a pre-teached reference pattern.
Conditions	Two sensors (Main sensor and Trigger sensor) are needed for this function.
Settings	• The Trigger sensor has to detect the full length of the body that contains the pattern. • The Main sensor has to be aimed at the e.g. holes or pins that constitute the pattern.

Speed and Length

Function description	This function is designed to monitor the length of an object as well as the speed of a conveyour belt. The actual value if the length in [mm] and the speed in [mm/s] are directly available on the IO-Link master.	
Conditions	Two sensors (Main sensor and Trigger sensor) are needed for this function.	
Settings	Distance between sensors.	25 ... 150 mm *Factory settings:* 100 mm

Divider function

| Function description	This function can be used to e.g. monitor how many items that are packed into a carton box. Once the preset number is reached the sensor gives an output so the full box can be replaced.	
Conditions	Only one sensor is needed for this function.	
Settings	A counter value must be set in the sensor.	
	Counter limit.	1...60 000 *Factory settings:* 5

Object and Gap Monitoring

Function description	This function is designed to monitor, that the length of an object and the gap between the following object on a conveyer belt, are witin certain limits.	
Conditions	Only one sensor is needed for this function.	
Settings	An acceptable minimum and maximum time [ms] mus be set for both the object size a gap size between two objects represented by the time it takes to pass the sensor.	
	Object minimum time.	10...60 000 ms *Factory settings:* 500 ms
	Object maximum time.	10...60 000 ms *Factory settings:* 10 000 ms
	Gap minimum time.	10...60 000 ms *Factory settings:* 500 ms
	Gap maximum time.	10...60 000 ms *Factory settings:* 10 000 ms
Outputs	Output 1 is active when an object is outside the set limits. Output 2 is active when the gap between two objects is outside the set limits.	

Alarm settings

|	SSC1 • 0 ... 100 % of actual SP *Factory settings: 20%*	SSC2 • 0 ... 100 % of actual SP *Factory settings: 20%*
Safe limits		
Dust alarm	Safe limits are used for dust alarm level.	
Water drop alarm	Safe limits are used for water drop alarm level.	
Temperature alarm	• High threshold -50 ... +150 °C • Low threshold -50 ... +150 °C *Factory settings:* *High value 70 °C* *Low value -20 °C*
