

100353 Low Power 8-Bit Register

General Description

The 100353 contains eight D-type edge triggered, master/slave flip-flops with individual inputs (D_n), true outputs (Q_n), a clock input (CP), and a common clock enable pin (\overline{CEN}). Data enters the master when CP is LOW and transfers to the slave when CP goes HIGH. When the \overline{CEN} input goes HIGH it overrides all other inputs, disables the clock, and the Q outputs maintain the last state.

The 100353 output drivers are designed to drive 50 Ω termination to -2.0V. All inputs have 50 k Ω pull-down resistors.

Features

- Low power operation
- 2000V ESD protection
- Voltage compensated operating range = -4.2V to -5.7V
- Available to MIL-STD-883

Note 3: F100K 300 Series cold temperature testing is performed by temperature soaking (to guarantee junction temperature equals -55°C), then testing immediately without allowing for the junction temperature to stabilize due to heat dissipation after power-up. This provides "cold start" specs which can be considered a worst case condition at cold temperatures.
