

ACUCT SPLIT CORE

Standard Accuracy

The Split-Core Current Transformers are designed to convert an AC operating current into a low voltage AC millivolt signal for use with microprocessor-based circuits that require maximum accuracy and precision. These compact and light-weight split-core current transformers are designed for installation on branch circuits within the electrical panel. The Split-Core CT Series is ideal for easy installation without disconnecting cables. Split-Core CTs come standard un-terminated stripped and tinned lead wires for easy connection to any of the Single or 3 Phase ACI power meter. CT models listed here are compatible with the ACI KW350-P1-D-S-SC, KW320-P1-D-W-SC-XX, KW320-P1-D-W-SC-PC, KW1850-P1-D-W, and KW1850-P1-D-S Power Meters where typical power measurements are required. For best accuracy, CTs should be selected based upon the size of the conductors being monitored by selecting the proper window size and referencing the expected maximum and minimum currents for the targeted application. The

acceptable Measurement Current Range is referenced in the ordering grid table. Please contact ACI for more information regarding the Split-Core Current Transformers.

Applications: Energy and Demand Metering, Load Surveys, LEED/Green Projects, ROI / Project Justification.

The Split Core mV Output Current Transformers are covered by ACI's Five (5) Year Limited Warranty. The warranty can be found in the front of ACI's Sensors & Transmitters catalog, as well as on ACI's web site, workaci.com.
