

■ Features

- · Constant Current mode output
- · Flicker free design
- · Plastic housing with class II design
- · Built-in active PFC function
- No load power consumption<0.5W(Blank-Type)
- Function options: 2 in 1 dimming (dim-to-off);
 Auxiliary DC output
- 3 years warranty

Applications

- · LED panel lighting
- · LED flood lighting
- Indoor LED lighting
- · Industrial lighting

Description

IDLC-25 series is a 25W LED AC/DC driver featuring the constant current mode output with flicker free design.IDLC-25 operates from $90\sim295$ VAC and offers models with different rated current ranging between 350mA and 1050mA. Thanks to the efficiency up to 82%, with the fanless design, the entire series is able to operate for $-20^{\circ}\text{C} \sim +90^{\circ}\text{C}$ case temperature under free air convection. IDLC-25 is equipped with various function options, such as dimming methodologies, so as to provide the optimal design flexibility for lighting system.

■ Model Encoding

- Aux. 12V will be damaged with short circuit; It will not be available when output voltage is not in constant current region or output no load condition.
 The driver is considered as a component that will be operated in combination with final equipment. Since EMC performance will be affected by the complete installation, the final equipment manufacturers must re-qualify EMC Directive on the complete installation again.
 The ambient temperature derating of 3.5°C/1000m with fanless models and of 5°C/1000m with fan models for operating altitude higher than 2000m(6500ft).
 To fulfill requirements of the latest ErP regulation for lighting fixtures, this LED power supply can only be used behind a switch without permanently connected to the mains.

■ DRIVING METHODS OF LED MODULE

 $\ensuremath{\ensuremath{\mathbb{X}}}$ This series works in constant current mode to directly drive the LEDs.

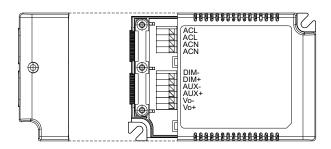

Typical output current normalized by rated current (%)

In the constant current region, the highest voltage at the output of the driver depends on the configuration of the end systems.

Should there be any compatibility issues, please contact MEAN WELL.

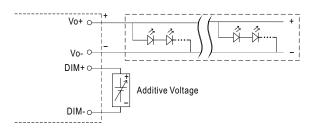

■ DIMMING OPERATION

imes 2 in 1 dimming function

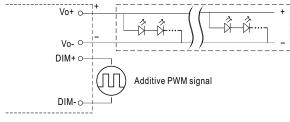

- · Output constant current level can be adjusted by applying one of the two methodologies between DIM+ and DIM-: 0 ~ 10VDC, or 10V PWM signal.
- Direct connecting to LEDs is suggested. It is not suitable to be used with additional drivers.

O Applying additive 0 ~ 10VDC

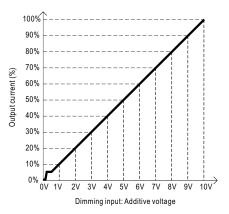

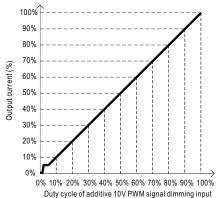

"DO NOT connect "DIM- to Vo-"

O Applying additive 10V PWM signal (frequency range 300Hz ~ 3KHz):

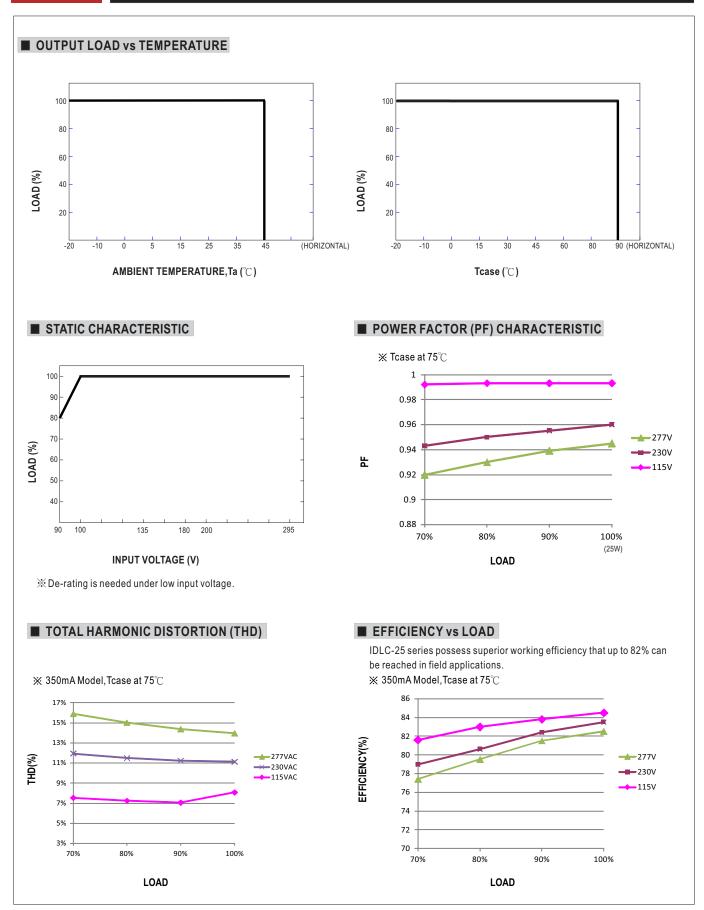

"DO NOT connect "DIM- to Vo-"

Note: 1. Min. dimming level is about 8% and the output current is not defined when 0%< Iout<8%.
2. The output current could drop down to 0% when dimming input is about 0Vdc or 10V PWM signal with 0% duty cycle.

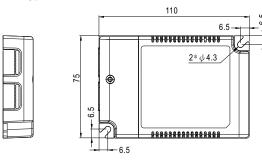

Unit:mm

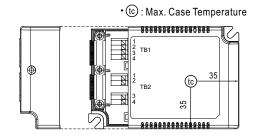

Case No.IDLC-25A

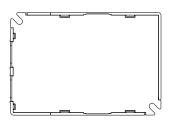

■ MECHANICAL SPECIFICATION

※ Blank-Type

NOTE: Please use wires with a cross section of 0.75~1.5mm² for TB1 and wires with a cross section of 0.5~1.5mm² for TB2.
