

ENP90 - ESR Needle Probe set with 2mm sockets

ENP90 - ESR Needle Probe set with 2mm sockets Information:

A pair of extremely sharp gold plated probes, primarily designed for the Atlas ESR and Atlas ESR PLUS (models ESR60 and ESR70). These gold needles feature our new standard 2mm sockets, allowing them to be fitted to industry standard 2mm banana plugs. Even the 2mm sockets are gold plated.

Each probe is 90mm long, is fully insulated except for the 13mm sharp gold needle. These are VERY sharp and care must be used! The needles can be bent with rough treatment.

Please note, your ESR unit must be fitted with 2mm plugs to be used with these probes. These probes are ONLY suitable for ESR units with firmware version 4.1 or later.
