Notes:

1. The module signal grounds, VeeR and VeeT, shall be isolated from the module case.
2. This is an open collector/drain output and shall be pulled up with 4.7-10k to Vcc_Host on the host board. Pull ups can be

connected to multiple power supplies, however the host board design shall ensure that no module has voltage exceeding module $V_{ccT/R} + 0.5 V$.

3. This is an open collector/drain input and shall be pulled up with 4.7-10k to V_{ccT} in the module.
4. See 2-wire electrical specification.
5. This shall be pulled up with 4.7-10k to V_{cc_Host} on the host board.

2 Wire Interface EEPROM

The EEPROM on the SFP28 passive cable assembly is designed for 256 addresses. The information for addresses 0 to 127 is listed below. This information can be tailored to any customer request. Any address can be altered to display customer specific information and more memory can be added if more addresses are needed. Addresses 128 to 255 can be reserved for customer specific information that is in addition to the SFF 8431 specification.
