STANDARD APPLICATIONS

TSF-6592 is designed for stencil/screen printing, rotating drum, slide fluxers and/or syringe applications. Great for rework applications on all PCB packages of various electronic devices. TSF-6592 is great for rework applications on all PCB packages. TSF-6592 can be used in BGA/PGA sphere/pin attachment vehicle or for repair and reballing/repinning. This flux works on flip chip, chip scale package and flip chip bumping sites assemblies as a soldering paste flux.

PRINTING PARAMETERS

Temperature/Humidity

Optimal ranges are 21 to 25 °C (70 to 77 °F) and 35 to 65% RH

RECOMMENDED REFLOW PROFILE

The recommended convection reflow profile for TSF-6592 for Sn96.5Ag3.5, Sn99.3Cu0.7, or the various SnAgCu alloys is shown here. This profile is simply a guideline. As TSF-6592 was engineered to be a versatile, robust interconnect material other reflow profiles would be effective. Your optimal profile may be different from the one shown based on your oven, component design, fixturing and mix of defects. Please contact Kester Technical Support if you need additional profiling advice.

CLEANING

TSF-6592 is a no-clean chemistry. The residues do not need to be removed for typical applications. If residue removal is required, call Kester Technical Support.

SAFETY & WARNING

It is recommended that the company/operator read and review the Safety Data Sheets for the appropriate health and safety warnings before use. **Safety Data Sheets are available.**

STORAGE

Refrigeration is the recommended optimum storage condition for TSF-6592 to maintain consistent viscosity, reflow characteristics and overall performance. TSF-6592 should be stabilized at room temperature prior to printing. TSF-6592 should be kept at standard refrigeration conditions, 0 to 10 °C (32 to 50 °F). Please contact Kester if you require additional advice with regard storage and handling of this material. Shelf life is 6 months from date of manufacture when handled properly and held at 0 to 10 °C (32 to 50 °F).
