2 Description

The BGM781N11 is a combination of a low-insertion-loss pre-filter with Infineon's high performance low noise amplifier (LNA) and a high-attenuation post-filter for Global Positioning System (GPS) applications. Through the low insertion loss of the filters, the BGM781N11 provides 18.6 dB gain, 1.7 dB noise figure and high linearity performance. In addition BGM781N11 provides very high out-of-band attenuation in conjunction with a high input compression point. Its current consumption is as low as 3.3 mA. It operates over the 1.5 V to 3.6 V supply voltage range.
