

Self-seating Connector Accessories Circular Backshells

SUNBANK is a brand name of Esterline Connection Technologies

For over 50 years Sunbank has been supporting the interconnect market by designing products that define the standards for highly reliable products required for harsh environments. Sunbank's self-seating products provide superior backshell interface solution with the connector compared to conventional self-locking products. We proudly support Aerospace, Defense, Marine, and Industrial power and signal interconnect markets, worldwide since 1958.

Features & Benefits

SELF CONTAINED

Product Envelope Environmental

The Self-seating mechanism provides a robust and simple connector interface when compared to other conventional, multi-step, and labor intensive self-locking products; Sunbank provides a lower mass product in a smaller envelope.

ALIGNMENT

Connector Mating/Alignment

Self-seating Products ensure that there is NO connector and accessory misalignment. Positive and accurate alignment features ensure minimal side loading condition as present in conventional self-locking products.

MECHANICAL /ELECTRICAL

Mechanical Decoupling

Self-seating products provide superior mechanical performance when compared to other self-locking products. Also utilizes minimal torque values, while achieving optimal electrical and mechanical bonding between the accessory and connector shells.

ENVIRON- MENTAL

Global Plating Compliance

The Self-seating products are available in a wide range of surface finishes to protect against harsh environments while maintaining mechanical, electrical, and green integrity.

COST SAVINGS

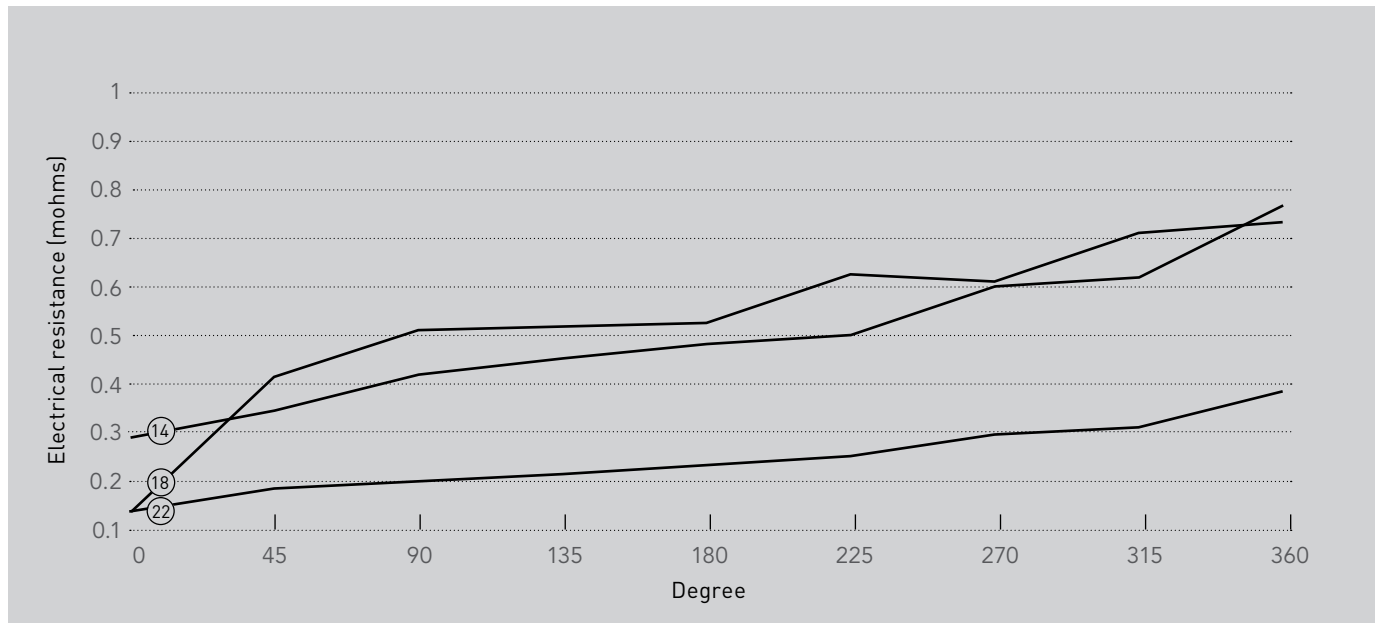

Ease of Installation

Imagine the material and labor cost savings that can be realized by not having to utilize locking compound, adhesive and lockwire to prevent failure. The self-seating product is a highly reliable and worry free product; basically a 'Set and Forget" system.

Self-seating performance

De-coupling, electrical resistance

Shell size tested	Torque (inch lbs)	Accessory material	Resistance in mohms @ * degree								
			0	45	90	135	180	225	270	315	360
14	19	Stainless Steel	0.29	0.35	0.43	0.45	0.47	0.51	0.60	0.64	0.78
18	29	Aluminum	0.14	0.41	0.51	0.53	0.53	0.63	0.61	0.71	0.74
22	42	Aluminum	0.14	0.18	0.20	0.22	0.24	0.25	0.28	0.31	0.37

Notes

1. Electrical resistance values are given for information only and are not requirements. Actual values will depend on service conditions, accessory size and configuration.

Self-seating Product Selection Guide

The following self-seating product descriptions are provided to assist in selecting the appropriate circular connector accessory. Please see individual series pages for additional design variants.

03 Series

Band adapter products

Band adapter products provide an economical (full 360°) approach to terminating overall or individual cable shielding, especially where future maintenance or repairability are required.

06 Series

Shrink boot adapter products

Shrink boot shape products are configured to accommodate heat-activated or cold shrink boot shapes. These adapters can be provided with preterminated braided shielding.

09 Series

Strain relief adapter products

Strain relief adapter products provide mechanical cable bundle clamping for light, medium and heavy duty applications. 90° designs are also offered for most available connectors.

12 Series

Adapter extender products

Adapter extender products allow for a greater amount of working area, behind the connector, while allowing the use of the provided strain relief.

15 Series

Non-environmental adapter products

Non-environmental adapter products are designed with provisions for strain relief straight, 45° and 90° options.

18 Series

Environmental adapter products

Environmental adapter products are designed for cable sealing or moisture resistance, offered with a selection of available strain relief clamps and provisions for straight, 45° and 90° options. Note: cable sealing, fluid immersion, moisture resistant, splash-proof and dust resistance.

21 Series

EMI/RFI adapter products

EMI/RFI adapter products provide individual and/or overall shield termination for optimal continuity. Products are offered with choice of strain relief and provisions for straight, 45°, and 90° options.

24 Series

EMI/RFI environmental products

EMI/RFI environmental products offer the combination of options available in Product series 18 and 21. The end result is a shield-terminating, environment resisting design with strain relief and orientation options.

33 Series

EMI/RFI S spring adapter products

EMI/RFI spring adapter products offer termination and grounding for cables utilizing metal foil and/or shield braid for overall cable shielding. The cable circumference is completely grounded to the adapter via the peripheral spring component provided.

36 Series

Shorting can adapter products

Shorting can adapter products provide an enclosed protective area behind the connector for the assembly of test connectors and shorting plug assemblies.

39 Series

Pipe thread adapter products

Pipe thread adapter products are designed to fit most National Pipe Thread (NPT) standardized parts (i.e. hose fittings, conduit).

51 Series

Lamp base adapter products

Lamp base adapter products are designed to provide cable bundle shield termination via 360° compression form and opposing threaded compression nut. To complete the assembly, the use of a heat-activated or cold shrink boot is suggested for jacketed cable.

57 Series

Commercial conduit product adapters

Commercial conduit product adapters allow for field installable termination of Sealtite® (Liquidtite®) conduit, typically associated with most industrial applications.

90 Series

Accessory hardware products

Accessory hardware products allow for the completed assembly or repair of various interconnect system situations.

99 Series

Assembly tool products

Assembly tool products are designed to support the need of today's interconnect product lines. All Sunbank tools provide cost effective, consistent, high reliability performance needed for today's military and aerospace environment.

Notes

- F3, F4 and X1 are standard codes when environmental requirements are not required. Use the following codes when environmental product is required.
 Use code F1 if environmental seal is required. MIL-C-38999 Series I only.
 Use code F2 for moisture proof only. (environmental seal not available) MIL-C-38999 Series I and II only.
 Use code F5 if environmental seal is required. MIL-C-38999 Series III or IV only.
 Use code X2 if environmental seal is required.

Notes

1 Metric dimensions are shown in parentheses for reference only.

* The SJT07 jam nut receptacle (connector codes X1 & X2) uses different threads per shell size. Therefore, the shell sizes shown in parentheses would apply. Care should be taken when selecting the correct combination backshell to connector shell size to avoid improper fit.

** Use C hex size designator for codes A1, F2, F3, F4, L1 & X1.
Use D hex size designator for codes F5 & X2.

Maximum Cable Diameters

Z diameter

Shell size	Connection series designator

28	1.384 (35.2)					1.384 (35.2)		

Notes

- 1 Metric dimensions are shown in parentheses for reference only.
- 2 If cable diameter exceeds values, consult factory.

Modification codes

Mode code designator	Modification description
028	Assembly supplied with hex coupling nut
038	Assembly supplied with fluorosilicone elastomers
046	Assembly supplied with Buna-N elastomers
048	Assembly supplied less strain relief clamp or cable sealing nut
049	Internal surfaces to be coated with non-conductive abrasion resistant material for enhanced wire management feature.
114	Assembly supplied with a Sunband™
115	Assembly supplied with a constant force spring (CFS)

Example part number

Notes

1 Consult factory for modification code availability for a given Product series.

Torque values

Category 2

MIL-C-5015 (MS3400 Series)
 MIL-C-22992
 MIL-C-26482 Series II
 MIL-C-28840
 MIL-C-38999 Series III & IV
 MIL-C-81703 Series I, II, III

Thread torque for cable clamp hardware

Screw size	Recommended maximum torque
4-40	6.4
6-32	12
8-32	13.6
10-32	19.2
1/4-20	51.2

Notes

Torque values for Category 1 are 80% of MIL-C-85049 light and medium duty thread strength.

Category 2 torque values are based on MIL-C-85049 heavy duty thread strength.

Cable clamp screw torque values are based on independent testing conducted at Sunbank.

Accessory to Shrink Boot

Notes

Shrink boot part number information is given as a reference only for selecting the correct boot size for the adapter sizes listed. Shrink boot materials and configuration are application dependent, and should be specified by the user.

Suggested procedure

- 1 Temporarily assemble the adapter to the connector if you're using a product that requires EMI/RFI protection, environmental sealing protection or a combination of both. If not, refer to steps 7 and 10 only.
- 2 Place the remaining adapter components on the cable in the sequence shown on the individual product drawing. Keep these components away from the termination area so they do not interfere with subsequent assembly steps.
- 3 Insert cable into adapter and bottom against connector. Hold cable in position and mark outer shield (or jacket) at rear end of adapter.
- 4 Disassemble adapter from the connector and slide up cable with the other components.
- 5 Trim jacket (if applicable) approximately $\frac{1}{2}$ to $1\frac{1}{2}$ inches back from the mark making sure the jacket will be positioned under the elastic seal. For overall shields comb out and fold back up cable and tie or tape. For individual shields pigtail and flatten by hand then fold back onto cable and tie or tape.
- 6 Prepare and terminate the connector in accordance with standard practice.
- 7 Assemble the adapter onto the connector and tighten within the specific torque values shown on page 43 of this catalog. Note, it will not be necessary to align the adapters interfacial teeth with the connector. This product will self-align as you tighten securely to the connector.
- 8 Untie shield(s) and arrange evenly. Place shields over termination platform and terminate with proper tools. If using RFI rings, place the shield(s) over the cone or first ring and slide the remaining ring in to place and spot tie. Trim off excess shield.
- 9 For environmental assemblies, be sure the adapter containing the elastic seal is positioned above the cable jacket when securing the remaining adapter components.
- 10 Engage cable clamp or rear adapter onto the first adapter and tighten securely. Tighten saddle clamps around cable if applicable.

Basic part designator	Product page	Configuration description	
001 022	51 53	These products have a circular shape self-seating spin coupling nut and are an economical solution to terminating single or double over-all cable shields or individual cable shields where future repairability and maintainability are required. It provides a full 360 degree shield termination utilizing either Sunbank's banding system or constant force spring termination device.	
008 024	55 57	A banding accessory having a dual termination platform for termination overall cable shields and outer protective overbraids.	
009	59	A banding backshell assembly having a cable clamp that conceals the terminating platform and provides cable strain relief.	
010	61	A backshell that utilizes the Sunband™ termination technique with environmental sealing capabilities. Options for light and heavy duty cable clamps or sealing nut.	
011	63	These products have a shield termination platform that is designed to accept a hose clamp for terminating individual shields, in addition to providing strain relief for the wire bundle.	
013	65	A banding backshell with individual termination slots providing access for individual shields to be fed out from the interior of the accessory and terminated utilizing Sunbank's banding system, in addition to providing wire bundle strain relief.	
014	67	A backshell designed to terminate individual shields with a tapered ground ring which seats into a corresponding tapered surface in the backshell. This is followed by a transition adapter that secures the ring in place and provides a termination platform for overall cable shields utilizing Sunbank's banding system.	
015	69	This series combines the self-seating captive spin coupler feature with a low profile individual and overall shield termination banding platform. The main body can be removed without disturbing the termination area allowing for field repair or wire additions.	
016	71	This single series combines the self-seating captive spin coupler feature with a low profile individual shield termination banding platform. The main body retracts without disturbing the termination area allowing for field repair or wire additions.

Notes

- 1 Metric dimensions are shown in parentheses for reference only.
- 2 Cable range is defined as the envelope area of the cable or wire bundle. It is not intended for inspection criteria.
- 3 O-ring not supplied on connector designators A1 and L1. F2 is moisture proof only.
- 4 Consult factory when cable entry diameter exceeds Z diameter (see page 41).
- 5 See Section 90 and 99 (See pages 162 and 169) for band termination selection and application tool data..

Tolerance

Unless otherwise specified:

- .X ± .060 (1.5)
- .XX ± .030 (0.8)
- .XXX ± .015 (0.4)
- Angles ± 5 degrees

Basic part designator	Product page	Configuration description	
001 017	75 77	These products have a circular shape self-seating spin coupling nut and are an economical solution to terminating single or double over-all cable shields or individual cable shields where future repairability and maintainability are required. It provides a full 360 degree shield termination utilizing either Sunbank's banding system or constant force spring termination device.	
008	79	Backshells with a circular shaped self-seating coupling nut that accommodates heat shrinkable boots for environmental sealing capabilities.	
009 026	81 83	Accessories with shrink boot accommodations having a shield sock attached at the rear of the adapter by means of crimp ring, band, constant force spring or magnaforming. The shield sock can then be attached to the overall cable shield by means of a split support ring and then terminated with a band or constant force spring.	

Note: shrink boot reference data is available on page 44

20	1.250	(31.8)	1.346	(34.2)	1.497	(38.0)

Notes

- 1 Metric dimensions are shown in parentheses for reference only.
- 2 O-ring not supplied on connector designators A1 and L1. F2 is moisture proof only.
- 3 See shrink boot reference data, page 44.
- 4 Consult factory when cable entry diameter exceeds Z diameter (see page 41).
- 5 See Section 90 and 99 (See pages 162 and 169) for band termination selection and application tool data.

Tolerance

Unless otherwise specified:

- .X ± .060 (1.5)
- .XX ± .030 (0.8)
- .XXX ± .015 (0.4)
- Angles ± 5 degrees

Example part number

Basic part designator	Product page	Configuration description	
001	87 & 89	Medium to heavy duty clamps for applications requiring strain relief clamp bars with Sunbank's Self-seating captive spin coupling feature. Straight and angled configurations are offered for most connector series.	
021	91	Sunbank's Qk-Ty offers the self-seating captive spin coupler feature with reduced weight in a low profile configuration with simple installation strain relief for open wire bundles used on circular connectors.

* For connector family identification details see Page 17, Section I. Consult factory for availability of other connector designators not shown above.

Notes

- 1 Metric dimensions are shown in parentheses for reference only.
- 2 Cable entry is defined as the envelope area of the cable or wire bundle. It is not intended for inspection criteria.
- 3 Not recommended for size 8, 4 and 0 contacts.
- 4 Cable bundle is secured using a MS3367-1 tie strap or equivalent.

Tolerance

- Unless otherwise specified:
- .X ± .060 (1.5)
- .XX ± .030 (0.8)
- .XXX ± .015 (0.4)
- Angles ± 5 degrees

1125	30	1.125 (28.6)	48	432	130.0
1375	30	1.375 (34.9)	48	528	150.0

Notes

- 1 Metric dimensions are shown in parentheses for reference only.
- 2 Material: tin coated copper per QQ-B-575B, ASTM B33.
- 3 Direct current ratings are given for information only and are not requirements. Values shown are for uninsulated braid in free air at 80 degrees F (30 degrees C). Values should be derated if the braid is insulated or in close contact with other components.
- 4 Consult factory when cable entry diameter exceeds Z diameter.

50	1.718	(43.6)	1.758	(44.7)	1.000	(25.4)
51	1.750	(44.5)	1.790	(45.5)	1.000	(25.4)
52	1.781	(45.2)	1.821	(46.3)	1.000	(25.4)
53	1.812	(46.0)	1.852	(47.0)	1.000	(25.4)
54	1.843	(46.8)	1.883	(47.8)	1.000	(25.4)

Notes

- 1 Metric dimensions are shown in parentheses for reference only.
- 2 Finish: anodize, clear non-conductive.
- 3 Consult factory when cable entry diameter exceeds Z diameter.

Tolerance

- Unless otherwise specified:
- .X ± .060 (1.5)
- .XX ± .030 (0.8)
- .XXX ± .015 (0.4)
- Angles ± 5 degrees

Table I

Dash number	Inside diameter			
	max		min	
11	.78	(19.8)	.44	(11.2)
32	.90	(22.9)	.50	(12.7)
14	1.125	(31.8)	.69	(17.5)
15	1.50	(38.1)	.82	(20.8)
16	1.75	(44.5)	.82	(20.8)
17	2.00	(50.8)	1.06	(26.9)

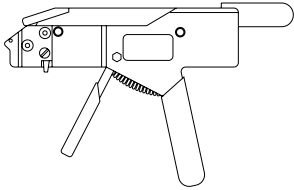

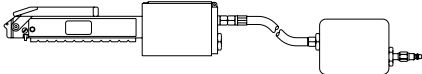

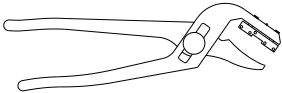

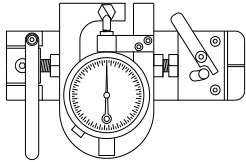

Notes

- 1 Metric dimensions are shown in parentheses for reference only.
- 2 Consult factory when cable entry diameter exceeds Z diameter.

Example part number

Basic part designator	Product page	Configuration description	
001	170	Banding application tools for terminating Sunbank Series 90-001 stainless steel metal bands.	
002	171	Pneumatic banding application tools for terminating Sunbank Series 90-001 stainless steel metal bands.	
003	172	Band roll-over tools for terminating Sunbank Series 90-001 stainless steel metal bands.	
004	173	Calibration and inspection tools for Sunbank Series 99-001 band application tools.	

Band application tool data

Part number	Tool description	Weight lbs	Identification number	Patent number
99-001				
1100	Standard band application tool	1.38	STS-1100	5,000,232
1101	Standard band application tool/roll-over tool	2.32	STS-1101	
1200	Mini-band application tool	1.38	STS-1200	5,000,232
1201	Mini-band application tool/roll-over tool	2.32	STS-1201	

Tools shown above are supplied under identification number STS-1101 or STS 1201

Example part number

Band application tool data – pneumatic tools

Part number	Tool description	Weight lbs	Identification number
99-002			
1100	Standard band application tool	3.05	STS-P1
1200	Mini-band application tool	3.05	STS-P2

Example part number

Band application tool data

Part number	Tool description	Weight lbs	Identification number
99-003			
R03	Roll-over tool	0.94	STS-R03
RPI	Roll-over tool (modified plier version)	3.05	STS-RPI
BRI	Band removal tool	0.68	STS-BRI

Identification number STS-R03

Identification number STS-BR1

Example part number

Band application tool data – calibration/inspection tools

Part number	Tool description	Weight lbs	Identification number
99-004			
CT	Calibration gage/fixture	3.30	STS-CT
CT1	Calibration inspection fixture	0.31	STS-CT1
CT2	Go/no-go inspection gage	0.03	STS-CT2
CT3	Inspection fixture and go/no-go gage	0.34	STS-CT3
CG3	Calibration inspection fixture (mini-band)	0.31	STS-CG3
CT4	Go/no-go inspection gage (mini-band)	0.03	STS-CT4
CT4A	Inspection fixture and go/no-go gage (mini-band)	0.34	STS-CT4A
