Harmonised motor and machine control

MOTOR CONTROL

200% starting torque
- Near stand-still operation (0.5 Hz)
- Smooth control of high inertia loads
- Control of fast cyclic loads

Torque control in open loop
- Ideal for low to medium torque applications
- Can replace a flux vector or servo drive in suitable systems

Motor control
- Surface Permanent Magnet Motor
- Interior Permanent Magnet Motor
- Induction Motor

One parameter auto-tuning
- Just by entering the kW rating of the motor the MX2-V1 gives you smooth and safe operation

Safety inside
- Conforms to safety norm ISO 13849-1 Cat. 3 performance level PLd
- 2 Safety inputs
- External device monitoring (EDM)

Drive Programming
- Flow chart programming
- Text editor
- Intuitive - up to 5 tasks in parallel

Positioning
- Up to 8 pre-set positions with "Homing"
- Speed synchronisation

Network Integration
- Modbus RS485 built-in
- Option units for EtherCAT, CompoNet, DeviceNet

Amazing in Control

High starting torque and torque control capability in open loop mode give you full control of your machine dynamics and performance. Options for all of the major open network systems.

Torque master
Frequency response vs Torque variation
Example with 7.5 kW 4-pole motor
The MX2-V1 delivers 200% starting torque near stand-still (0.5 Hz) and can operate in torque control in open loop mode. This allows the MX2-V1 to be used in applications where closed loop AC vector drives were previously used.

Easy network integration

Standard industrial networks, such as EtherCAT, CompoNet or DeviceNet as options. High-speed EtherCAT provides solutions for the entire system from input to output with Sysmac Series.

Easy communications setting

Easy programming using OMRON Function Blocks
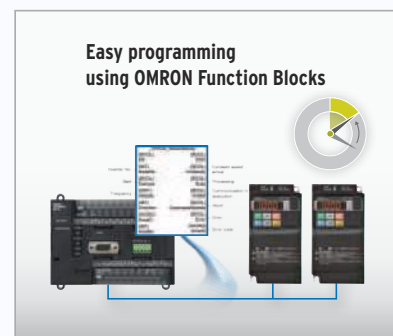

Built-in RS-485 Modbus communications. OMRON Function Blocks are available for the CP H/L and CJ-series PLCs. Those control the MX2-V1 via Modbus communications easily.
Safety in Control

Safety is embedded in the MX2-V1, according to ISO 13849-1, Cat. 3, with two safety inputs and an External Device Monitoring (EDM) output.

No external contactors on the motor side are required, meaning simpler wiring for the user.

**Safety embedded;
ISO 13849-1, Cat. 3**

**MOTOR CONTROL
Permanent magnet motors**

Dual contactors at the output of the inverter are no longer required. Direct connection to a safety controller ensures compliance to ISO 13849-1, Cat. 3.

The PM motor conforming to high-efficiency regulations can be controlled. The PM motor promotes further energy saving and achieves earth-friendly machine control.

Position and run!

The MX2-V1 is a drive and position controller in one, ideal for modular machines where moderate positional accuracy is required. Speed synchronisation is also possible, with no additional programming required.

Speed synchronisation

With no external hardware required, and via standard parameter settings, speed synchronisation can be achieved. The MX2-V1 will act as a speed follower to an external pulse generator/encoder signal up to 32 KHz.

Positioning functionality

Specially developed application functionality enables the MX2-V1 to solve simple positioning tasks without the need for an external controller. Up to 8 positions, plus home, can be selected by the user, and furthermore, the MX2-V1 can be switched between speed and position mode.
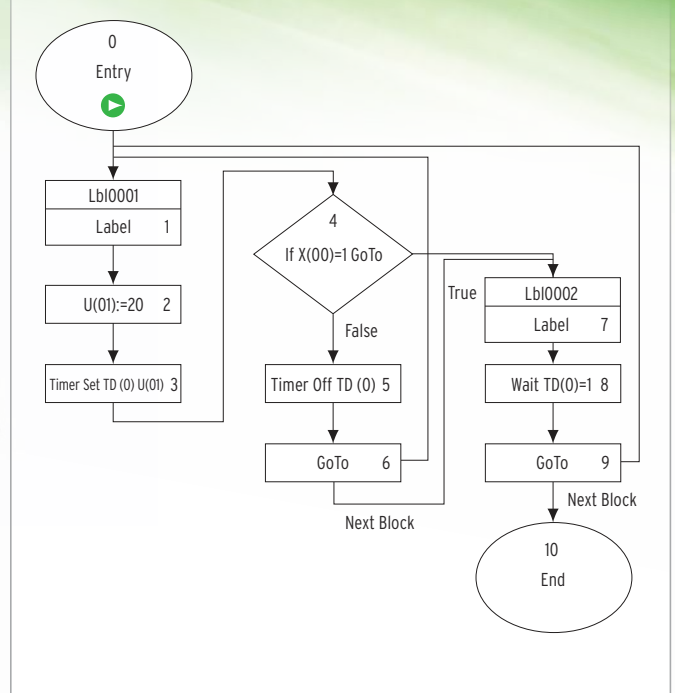

Program and play!

The MX2-V1 gives you the power to create smart solutions using PLC functionality, as standard. Via an intuitive flow chart programming tool, you can create programs with up to 1000 lines of code and with 5 tasks running in parallel.
Free to program

- Intuitive and user friendly flow chart programming
- Integrated in CX-Drive
- Up to 1000 lines in a program
- 5 tasks can run in parallel
  (CX-Drive version 2.80 or higher is required.)

Multi-function Compact Inverter
MX2-Series V1 type

Born to drive machines

- Positioning functionality.
- Fieldbus communications with optional unit
  EtherCAT, CompoNet and DeviceNet
- Drive Programming.
- Current vector Control.
- High Starting torque: 200% at 0.5 Hz.
- Safety function * EN ISO 13849-1:2008 (Cat.3/PLd)
  IEC 60204-1 Stop Category 0
- Speed range up to 580 Hz.

* When optional DeviceNet communication unit or CompoNet communication unit is mounted onto the MX2-series V1 type, the inverter will not conform to the safety standards.

Function Specifications

Function name		Specifications
Enclosure ratings *1		Open type (IP20)
Control	**Control method**	Phase-to-phase sinusoidal modulation PWM
	Output frequency range *2	0.10 to 400 Hz (or 580 Hz in the high-frequency mode; restrictions apply)
	Frequency precision *3	Digital command: ±0.01% of the max. frequency, Analog command: ±0.2% of the max. frequency (25±10°C)
	Frequency setting resolution	Digital setting: 0.01 Hz, Analog setting: One-thousandth of the maximum frequency
	Voltage/Frequency characteristics	V/f characteristics (constant/reduced torque) Sensorless vector control, V/f control with speed feedback
	Overload current rating	Heavy load rating (CT): 150%/60 s Light load rating (VT): 120%/60 s
	Instantaneous overcurrent protection	200% of the value of heavy load rating (CT)
	Acceleration/Deceleration time	0.01 to 3600 s (linear/curve selection), acceleration/deceleration 2 setting available
	Carrier frequency adjustment range	2 to 15 kHz (with derating)
	Starting torque	200%/0.5 Hz (sensorless vector control)
	External DC injection braking	Starts at a frequency lower than that in deceleration via the STOP command, at a value set lower than that during operation, or via an external input. (Level and time settable).
Protective functions		Overcurrent, overvoltage, undervoltage, electronic thermal, temperature error, ground fault overcurrent at power-on status, rush current prevention circuit, overload limit, incoming overvoltage, external trip, memory error, CPU error, USP error, communication error, overvoltage suppression during deceleration, protection upon momentary power outage, emergency cutoff, etc.
Input signal	**Frequency settings**	Digital Operator External analog input signal: 0 to 10 VDC/4 to 20 mA, Modbus communication (Modbus-RTU)
	RUN/STOP command	Digital Operator External digital input signal (3-wire input supported), Modbus communication (Modbus-RTU)
	Multi-function input	7 points (Selectable from 59 functions)
	Analog input	2 points (Voltage FV terminal: 10 bits/0 to 10 V, Current FI terminal: 10 bits/4 to 20 mA)
	Pulse input	1 point (RP terminal: 32 kHz max., 5 to 24 VDC)
Output signal	**Multi-function output**	2 points (P1/EDM, P2; selectable from 43 functions)
	Relay output	1 point (1c contact: MC, MA, MB; selectable from 43 functions)
	Analog output (Frequency monitor)	1 point (AM terminal: Voltage 10 bits/0 to 10 V) (Frequency, current selectable)
	Pulse output	1 point (MP terminal: 32 kHz max., 0 to 10 V)
Communications	**RS-422**	RJ45 connector (for Digital Operator)
	RS-485	Control circuit terminal block, Modbus communication (Modbus-RTU)
	USB	USB1.1, mini-B connector
Drive Programming *4		Calculate, Logic, Control I/O and so on
Other functions		AVR function, V/f characteristics switching, upper/lower limit, 16-step speeds, starting frequency adjustment, jogging operation, carrier frequency adjustment, PID control, frequency jump, analog gain/bias adjustment, S shape acceleration/deceleration, electronic thermal characteristics, level adjustment, restart function, torque boost function, fault monitor, soft lock function, frequency conversion display, USP function, motor 2 control function, UP/DWN, overcurrent control function, etc.
Operating environment	**Ambient operating temperature**	-10 to 50°C (However, derating is required).
	Ambient storage temperature	-20°C to 65°C
	Ambient operating humidity	20% to 90% RH (with no condensation)
	Vibration resistance	5.9 m/s^2 (0.6G), 10 to 55 Hz
	Application environment	At a maximum altitude of 1,000 m; indoors (without corrosive gases or dust)
Options	**EtherCAT Communication Unit**	3G3AX-MX2-ECT
	CompoNet Communication Unit	3G3AX-MX2-CRT-E
	DeviceNet Communication Unit	3G3AX-MX2-DRT-E

Function name			Specifications
Other option			DC reactor, AC reactor, radio noise filter, input noise filter, output noise filter, regenerative braking unit, Braking Resistor, etc.
International standard	**EC directive**	**EMC directive**	EN61800-3: 2004
		Low voltage directive	EN61800-5-1: 2007
		Machinery directives	IEC 60204-1 Stop Category 0, EN IEC 61800-5-2 (STO), EN ISO 13849-1: 2008 (PLd)
	UL/cUL		UL508C

*1   Protection method complies with JEM 1030.
*2   To operate the motor at over 50/60 Hz, contact the motor manufacturer to find out the maximum allowable speed of revolution.
*3   For the stable control of the motor, the output frequency may exceed the maximum frequency set in A004 (A204) by 2 Hz max.
*4   Refer to the Drive Programming USER'S MANUAL (No. I580).

Note: 1. The applicable motor is a 3-phase standard motor. For using any other type, be sure that the rated current does not exceed that of the Inverter.
2. Output voltage decreases according to the level of the power supply voltage.
3. The braking torque at the time of capacitor feedback is an average deceleration torque at the shortest deceleration (when it stops from 50 Hz). It is not a continuous regeneration torque. Also, the average deceleration torque varies depending on the motor loss. The value is reduced in operation over 50 Hz.

Components and Functions

Inverter MX2-series V1 type

Modbus-RTU Termination resistor selector switch
OFF (Factory default)   ON

Safety function selector switch
Disable (Factory default)   Enable

USB connector (mini-B)

Connector for Digital Operator (RJ45)

EDM function selector switch

P1 terminal (Factory default)   EDM output

Multi-function contact terminal block

Control circuit terminal block A

Control circuit terminal block B

CHARGE indicator

Main circuit terminal block

Name	Function
Modbus-RTU Termination resistor selector switch	Use this Terminal Resistor selector switch for RS-485 terminals on the control circuit terminal block. When this switch is turned ON, the internal 200 Ω Resistor is connected.
Safety function selector switch	Turn this switch ON when using the safety function. Turn OFF the power before turning this switch ON/OFF. For details, refer to USER'S MANUAL (Cat.No.I585).
EDM function selector switch	Turn this switch ON when using the EDM output of the safety function. Turn OFF the power before turning this switch ON/OFF.For details, refer to USER'S MANUAL (Cat.No.I585).
USB connector	Use this mini-B USB connector to connect a PC. Even when the Inverter is being operated by a PC, etc., via USB connection, it can still be operated using the Digital Operator.
Connector for Digital Operator	Use this connector to connect the Digital Operator.
Connector for optional board	Use this connector to mount the optional board. (Communications Units and other options can be connected.)
Control circuit terminal blocks A and B	These terminal blocks are used to connect various digital/analog input and output signals for inverter control, etc.
Multi-function contact terminal block	Use this SPDT contact terminal block for relay outputs.
Main circuit terminal block	Use this terminal block to connect an output to the motor and Braking Resistor, etc. Also, use this terminal block to connect the inverter to the main power supply.
CHARGE indicator (Charge indicator LED)	This LED indicator is lit if the DC voltage of the main circuit (between terminals P/+2 and N/-) remains approx. 45 V or above after the power has been cut off. Before wiring, etc. confirm that the Charge LED indicator is turned OFF.

Note: This illustration shows the terminal block with the front cover removed.

Communication Unit

MX2-Series EtherCAT Communication Unit 3G3AX-MX2-ECT

This is the communication unit to connect the Multi-function Compact Inverter MX2 to EtherCAT network.
This communication unit passed the conformance test of EtherCAT.

Common Specifications

Item		Specifications
Power supply		Supplied from the inverter
Protective structure		Open type (IP20)
Ambient operating temperature		−10 to +50°C
Ambient storage temperature		−20 to +65°C
Ambient operating humidity		20% to 90% RH (with no condensation)
Vibration resistance		5.9 m/s^2 (0.6 G), 10 to 55 Hz
Application environment		At a maximum altitude of 1,000 m; indoors (without corrosive gases or dust)
Weight		100 g max.
International standard	UL/cUL	UL508C
	EC directive	EMC Directive :EN61800-3: 2004 Low Voltage Directive :EN61800-5-1: 2003

EtherCAT Communications Specifications

Item	Specifications
Communications standard	IEC 61158 Type12, IEC 61800-7 CiA 402 drive profile
Physical layer	100BASE-TX (IEEE802.3)
Connector	RJ45 × 2 (shielded type) ECAT IN : EtherCAT input ECAT OUT : EtherCAT output
Communications media	Category 5 or higher (cable with double, aluminum tape and braided shielding) is recommended.
Communications distance	Distance between nodes: 100 m max.
Process data	Fixed PDO mapping PDO mapping
Mailbox (CoE)	Emergency messages, SDO, SDO responses, and information
Distributed clock	FreeRun mode (asynchronous)
LED display	L/A IN (Link/Activity IN) × 1 L/A OUT (Link/Activity OUT) × 1 RUN × 1 ERR × 1
CiA402 drive profile	Velocity mode

EtherCAT Communication Unit Version Information

As a Sysmac Device, the MX2-series Multi-function Compact Inverter is designed to provide optimal functionality and enhanced operability when used in conjunction with a Machine Automation Control such as NJ/NX series and the automation software Sysmac Studio.

Unit Versions

Unit	Model	Unit version	
		Ver.1.0	Ver1.1
EtherCAT Communication Unit for MX2-Series	3G3AX-MX2-ECT	Supported	Supported
Compatible Sysmac Studio version (To connect the NJ Controller)		Version1.05 or higher*	Version1.05 or higher
Compatible Sysmac Studio version (To connect the NX Controller)		Version1.13 or higher*	Version1.13 or higher

* The function that was enhanced by the upgrade for Unit version1.1 can not be used. For detail, refer to "Function Support by Unit Version".

Function Support by Unit Version

| Unit Model Unit version Item	Unit version 1.0	Unit version 1.1
Store-function of back-up number of parameters	Not supported	Supported
Initializing function as parameters.	Not supported	Supported

Dimensions (Unit: mm)

3G3AX-MX2-ECT
*After the EtherCAT Communication Unit is installed, dimension D of the inverter increases by 26.4 mm.
(Dimension D of the inverter varies depending on the capacity. Refer to the MX2-series V1 type USER'S MANUAL (Cat.No.I585))
MX2-Series CompoNet Communication Unit 3G3AX-MX2-CRT-E

This is the communication unit to connect the Multi-function Compact Inverter MX2 to CompoNet network.

Common Specification

Item		Specification
Power supply		Supplied from the inverter
Protective structure		IP20
Ambient operating temperature		− 10 to 50 °C
Ambient storage temperature		− 20 to 65 °C
Ambient operating humidity		20 to 90%RH (with no condensation)
Vibration resistance		5.9m/s^2 (0.6G), 10 to 55Hz
Application environment		At a maximum altitude of 1,000 m; indoors (without corrosive gases or dust)
Insulation resistance		500VAC (between isolated circuits)
Weight		Approx. 170g
International standard	UL/cUL	UL508
	EC directive	EN61800-3: 2004 (2004/108/EC) Second environment, Category C3
		EN61800-5-1: 2007 (2006/95/EC) SELV

CompoNet Communications Specifications

Item	Specification
Slave type	Word Slave Unit (Mixed)
Certification	CompoNet Conformance Tested
CompoNet Profile	AC Drive (0x02)
Node Address	0 to 63, set with inverter parameter P190 or the rotary switches.
Communication power supply	- (External power not required)
Baud rates supported	4 Mbps, 3 Mbps, 1.5 Mbps, 93.75 kbps. Automatically detecting baud rate of Master Unit
Default Connection path	Supported, set with inverter parameter P046
Supported Assemblies	Basic Remote IO (Output assembly 20, Input assembly 70) Extended Speed IO (21, 71) Extended Speed and Torque Control (123, 173) Special IO (100, 150) Extended Control IO (101, 151) Extended Control IO and Multi function IO monitor (101, 153) Flexible Format (139, 159) Extended Speed and Acceleration Control (110, 111)
EDS file	Depending on the MX2 inverter model

Dimensions (Unit: mm)

3G3AX-MX2-CRT-E
* After the CompoNet Communication Unit is installed, dimension D of the inverter increases by 26.4 mm.
(Dimension D of the inverter varies depending on the capacity. Refer to the MX2-series V1 type USER'S MANUAL (Cat.No.I585))

MX2-Series DeviceNet Communication Unit 3G3AX-MX2-DRT-E

This is the communication unit to connect the Multi-function Compact Inverter MX2 to DeviceNet network.

Common Specification

Item		Specification
Power supply		Supplied from the inverter
Protective structure		IP20
Ambient operating temperature		− 10 to 50 °C
Ambient storage temperature		− 20 to 65 °C
Ambient operating humidity		20 to 90%RH (with no condensation)
Vibration resistance		5.9m/s² (0.6G), 10 to 55Hz
Application environment		At a maximum altitude of 1,000 m; indoors (without corrosive gases or dust)
Insulation resistance		500VAC (between isolated circuits)
Weight		Approx. 170g
International standard	UL/cUL	UL508
	EC directive	EN61800-3: 2004 (2004/108/EC) Second environment, Category C3
		EN61800-5-1: 2007 (2006/95/EC) SELV

DeviceNet Communications Specifications

Item	Specification
Certification	DeviceNet Conformance Tested
DeviceNet Profile	AC Drive (0x02)
Supported connections	Remote I/O: Master-Slave connection Poll Bit-Strobe COS Cyclic Explicit Messages Conform to DeviceNet specifications
Communication power supply	11 to 25VDC (MAX 50 mA, type 20 mA)
Unit device address range	MAC ID 0 to 63, set with inverter parameter P192
Baud rates supported	125, 250, or 500kbps. Automatically detects baud rate of Master Unit.
Default Connection path	Supported, set with inverter parameter P046
Supported Assemblies	Basic Remote IO (Output assembly 20, Input assembly 70) Extended Speed IO (21, 71) Extended Speed and Torque Control (123, 173) Special IO (100, 150) Extended Control IO (101, 151) Extended Control IO and Multi function IO monitor (101, 153) Flexible Format (139, 159) Extended Speed and Acceleration Control (110, 111) In case the DeviceNet master is configured using user allocation, only the input / output pairs can be configured.
EDS file	Depending on the MX2 Inverter model

Dimensions (Unit: mm)

3G3AX-MX2-DRT-E
* After the DeviceNet Communication Unit is installed, dimension D of the inverter increases by 26.4 mm.
(Dimension D of the inverter varies depending on the capacity. Refer to the MX2-series V1 type USER'S MANUAL (Cat.No.I585))

Options

Regenerative Braking Unit   3G3AX-RBU☐☐

Used with a Braking Resistor when the deceleration time of the motor is needed to be reduced in the MX2.

Connection Example

Inverter — Regenerative Braking Unit — Braking Resistor

```
Inverter          Braking Unit        Braking Resistor
P/+2 ─○   ○─ P      RB ─○   ○─ RB
N/-1 ─○   ○─ N       P ─○   ○─ P
          ○─ AL1 *  R1 ─○   ○─ 1
          ○─ AL2 *  R2 ─○   ○─ 2
```

* The alarm output terminals for the Regenerative Braking Unit.
Provide a circuit to turn off the primary power supply for the Inverter when the temperature relay of the built-in resistor or optional Braking Resistor is activated.

Specifications
Built-in Resistance Type (3G3AX-RBU21/-RBU22/-RBU41)

Class	3-phase 200-V class		3-phase 400-V class
Model name (3G3AX-)	RBU21	RBU22	RBU41*1
Connection resistance	17 Ω min.	17 Ω min.	34 Ω min.
Operating voltage ON/OFF	ON : 362.5 ± 5 V OFF : 355 ± 5 V (-5% or -10% setting available)		ON : 725 ± 5 V OFF: 710 ± 5 V (-5% or -10% setting available)
Operation indication	LED ON (Lit)		
Parallel interlocking operation function*2	5 units max.		
Built-in resistor — Internal resistance	120 W, 180 W	120 W, 20 W	120 W, 180 W × 2 in series
Built-in resistor — Allowable consecutive ON time	10 s max.	0.5 s max.	10 s max.
Built-in resistor — Allowable operation cycle	Cycle 1/10 (ON for 10 s, OFF for 90 s)	Cycle 1/80 (ON for 0.5 s, OFF for 40 s)	Cycle 1/10 (ON for 10 s, OFF for 90 s)
Built-in resistor — Power consumption	Instantaneous 0.73 kW Short-time rating 120 W	Instantaneous 6.6 kW Short-time rating 120 W	Instantaneous 1.46 kW Short-time rating 240 W
Protective function — Built-in resistor overheat protection	• Cooling fin temperatureRelay operates at approximately 200°C or higher. Recovers at approximately 170°C or lower. • Built-in temperature fuse (recovery impossible)*3 • Rating of contact250 V AC 200mA (R load) 12 V DC 500mA (R load) 42 V DC 200mA (R load) • Minimum load1mA (R load)		
Operating environment — Ambient temperature	-10 to 50°C		
Operating environment — Ambient storage temperature	-20 to 65°C		
Operating environment — Ambient operating humidity	20% to 90% (with no condensation)		
Operating environment — Vibration	5.9 m/s² (0.6G) 10 to 55 Hz		
Operating environment — Location	At a maximum altitude of 1,000 m (without corrosive gases or dust)		
Paint color	Munselle 5Y7/1 (cooling fan: aluminum ground color)		

*1   To use the braking resistor (Model: 3G3AX-RAB/RBB/RBC) for the 400-V class regenerative braking unit, be sure to remove the built-in resistor and connect two resistors of the same model in series. Using a 400-V class regenerative braking unit with only a single braking resistor connected may cause damage to the braking resistor.
*2   Use DIP switches to set the number of connected units.
*3   The built-in resistor has a thermal fuse. If the alarm terminals are not connected, the fuse may blow out in order to prevent the resistor from burning due to overheating. If the fuse blows out, the built-in resistor must be replaced.

Dimensions (Unit: mm)

3G3AX-RBU21/-RBU22/-RBU41

Ground terminal (M5)
Braking Resistor 3G3AX-RBA/-RBB/-RBC□□□□

Consumes the regenerative motor energy with a resistor to reduce deceleration time.

Connection Example

Inverter   Braking Resistor

P/+2 ○——○ P
RB ○——○ RB
        ○ 1 *
        ○ 2 *
* The alarm output terminals for the Braking Resistor.
  Provide a circuit to turn off the primary power supply for the
  Inverter when the temperature relay of the Braking Resistor is
  activated.

Specifications

Model		Compact type (3G3AX-RBA□□□□)				Standard type (3G3AX-RBB□□□□)				Medium capacity type (3G3AX-RBC□□□□)

3G3AX-RBC6001
3G3AX-RBC12001
Radio Noise Filter 3G3AX-ZCL□

Connected to the inverter input/output cables to reduce noise coming into the inverter from the power supply line and noise flowing from the inverter into the power supply line.
Connection Example
Note 1: Wind each of three phase wires in the same direction.
2: Can be used on both the input and output sides of the Inverter.

DC Reactor 3G3AX-DL□□□□

Used to suppress harmonic current generated from the Inverter.
Suppresses harmonic current better than the AC Reactor and can be used with the AC Reactor.

Connection Example

Inverter | DC Reactor

Interpreting Model Numbers

3G3MX2-A□□□□□-V1

MX2 Series V1 type

1) Voltage class

B	1-phase 200 VAC (200-V class)
2	3-phase 200 VAC (200-V class)
4	3-phase 400 VAC (400-V class)

2) Max. applicable motor capacity (CT)

001	0.1 kW
002	0.2 kW
004	0.4 kW
007	0.75 kW
015	1.5 kW
022	2.2 kW
030	3.0 kW
037	3.7 kW
040	4.0 kW
055	5.5 kW
075	7.5 kW
110	11 kW
150	15 kW

3) Area

-V	Japan and areas other than China and Europe
-ZV1	China
-E	Europe

Ordering Information

3G3MX2 Inverter Models

Note: Inverters with model numbers ending in "-V1" are designed to be used in areas other than China and Europe.
Refer to the above "Interpreting Model Numbers" for the model numbers for China and Europe.

* We recommend you to use above cable and connector together.
Note: Connect both ends of cable shielded wires to the connector hoods.

Software
How to Select Required Support Software for Your Controller
The required Support Software depends on the Controller to connect. Please check the following table when purchasing the Support Software.

Item	Omron PLC System	Omron Machine Automation Controller System
Controller	CS, CJ, CP, and other series	NJ/NX-series
Inverter	Inverter MX2-series V1 type Inverter MX2-series V1 type with EtherCAT Communication Unit (Applicable to the CJ series only.) Inverter MX2-series V1 type with CompoNet Communication Unit Inverter MX2-series V1 type with DeviceNet Communication Unit	Inverter MX2-series V1 type Inverter MX2-series V1 type with EtherCAT Communication Unit Inverter MX2-series V1 type with CompoNet Communication Unit Inverter MX2-series V1 type with DeviceNet Communication Unit
Software	FA Integrated Tool Package CX-One	Automation Software Sysmac Studio

FA Integrated Tool Package CX-One

Product name	Specifications	Number of licenses	Media	Model	Standards
FA Integrated Tool Package CX-One Ver. 4.☐	The CX-One is a comprehensive software package that integrates Support Software for OMRON PLCs and components. CX-One runs on following OS. Windows XP (Service Pack 3 or higher, 32-bit version) / Windows Vista (32-bit/64-bit version) / Windows 7 (32-bit/64-bit version) / Windows 8 (32-bit/64-bit version) / Windows 8.1 (32-bit/64-bit version) / Windows 10 (32-bit/64-bit version) CX-One Version.4.☐ includes CX-Drive Ver.2.☐. For details, refer to the CX-One catalog (Cat. No. R134)	1 license *	DVD	**CXONE-AL01D-V4**	–

* Multi licenses (3, 10, 30, or 50 licenses) and DVD media without licenses are also available for the CX-One.

Automation Software Sysmac Studio
Please purchase a DVD and required number of licenses the first time you purchase the Sysmac Studio. DVDs and licenses are available individually. Each model of licenses does not include any DVD.

Product name	Specifications	Number of licenses	Media	Model	Standards
Sysmac Studio Standard Edition Ver.1.☐☐	The Sysmac Studio provides an integrated development environment to set up, program, debug, and maintain NJ/NX-series Controllers and other Machine Automation Controllers, as well as EtherCAT slaves. Sysmac Studio runs on the following OS. Windows XP (Service Pack 3 or higher, 32-bit version) / Windows Vista (32-bit version) / Windows 7 (32-bit/64-bit version) / Windows 8 (32-bit/64-bit version) / Windows 8.1 (32-bit/64-bit version)/ Windows 10 (32-bit/64-bit version)	– (Media only)	DVD	**SYSMAC-SE200D**	–
	The Sysmac Studio Standard Edition DVD includes Support Software to set up EtherNet/IP Units, DeviceNet slaves, Serial Communications Units, and Support Software for creating screens on HMIs (CX-Designer). For details, refer to the Sysmac Integrated Catalogue (P072).	1 license *	–	**SYSMAC-SE201L**	–

* Multi licenses are available for the Sysmac Studio (3, 10, 30, or 50 licenses).

Overview of Inverter Selection

For detail of Inverter selection, refer to the MX2 series V1 type User's Manual. (Man.No.I585).

Motor Capacity Selection

Before selecting an invertor, first the motor should be chosen.In selecting the motor, first calculate the load inertia for the applications, and then calculate the required capacity and torque.
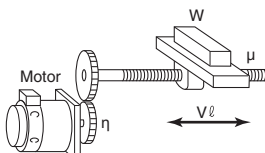

Make a simple selection (use Formulas for the required output power)

This method of calculation helps select a motor by calculating the output (W) required by the motor to maintain its regular rotations. It does not include calculation of the effect of acceleration/deceleration. Therefore, make allowance for the calculated value to select a motor. This calculation method can be applied to applications that operate constantly such as fans, conveyers, agitators etc.

This calculation method must not be applied to the following applications:
- Those requiring instant start-up.
- Those that frequently repeat operation and stop.
- Those that have a large inertia at the power transfer part.
- Those that have an inefficient power transfer part.
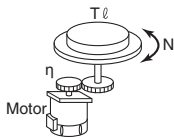

●For Straight-Line Operation: Normal Power PO (kW)

$$P_o = \frac{\mu \cdot W \cdot V\ell}{6120 \cdot \eta}$$

μ: Friction Coefficient
W: Mass of Straight-Line travelling part (kg)
$V\ell$: Speed of Straight-Line Travelling part (m/min)
η: Decelerator (Transfer part) Efficiency

●For Rotating Operation: Normal Power PO (kW)

$$P_o \text{ (kW)} = \frac{2\pi \cdot T\ell \cdot N\ell}{60 \cdot \eta} \times 10^{-3}$$
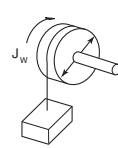

$T\ell$: Load Torque (Load Shaft) (N·m)
$N\ell$: Load Shaft Rotation Speed (r/min)
η: Transfer part (η≤1)

Detailed Selection Method (R.M.S Algorithm)

This method helps to select a motor by calculating the effective torque and maximum torque required to achieve a certain pattern of operation for the application. It selects a motor that is optimal for a particular operation pattern.
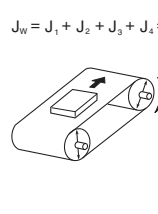

●Calculate the inertia with a Motor Shaft Conversion Value

Calculate inertias of all the components with the formula for inertia calculation shown below to convert them to a motor conversion value.
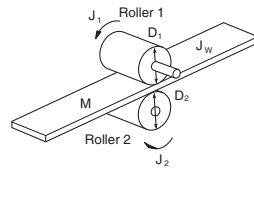

$$J_W = J_1 + J_2 = \left(\frac{M_1 \cdot D^2}{8} + \frac{M_2 \cdot D^2}{4} \right) \times 10^{-6} \text{(kg·m}^2)$$

J_W: Inertia (kg·m²) D : Diameter (mm)
J_1: Cylinder Inertia (kg·m²) M_1: Mass of Cylinder (kg)
J_2: Inertia from Object (kg·m²) M_2: Mass of Object (kg)
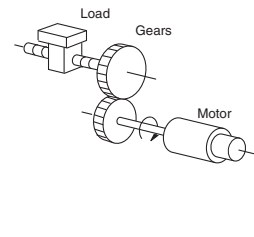

$$J_W = J_1 + J_2 + J_3 + J_4 = \left(\frac{M_1 \cdot D_1^2}{8} + \frac{M_2 \cdot D_2^2}{8} \cdot \frac{D_1^2}{D_2^2} + \frac{M_3 \cdot D_1^2}{4} + \frac{M_4 \cdot D_1^2}{4} \right) \times 10^{-6} \text{(kg·m}^2)$$

J_W: Inertia (kg·m²) D_1: Cylinder 1 Diameter (mm)
J_1: Cylinder 1 Inertia (kg·m²) D_2: Cylinder 2 Diameter (mm)
J_2: Inertia from Cylinder 2 (kg·m²) M_1: Mass of Cylinder 1 (kg)
J_3: Inertia from Object (kg·m²) M_2: Mass of Cylinder 2 (kg)
J_4: Inertia from Belt (kg·m²) M_3: Mass of Object (kg)
  M_4: Mass of Belt (kg)

$$J_W = J_1 + \left(\frac{D_1}{D_2} \right)^2 J_2 + \frac{M \cdot D_1^2}{4} \times 10^{-6} \text{(kg·m}^2)$$

J_W: System Inertia (kg·m²)
J_1: Roller 1 Inertia (kg·m²)
J_2: Roller 2 Inertia (kg·m²)
D_1: Roller 1 Diameter (mm)
D_2: Roller 2 Diameter (mm)
M : Work Equivalent Mass (kg)
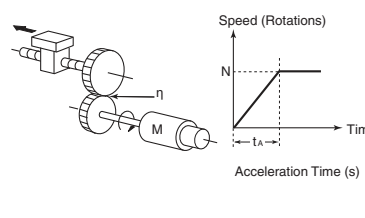

$$J_L = J_1 + G^2(J_2 + J_W) \text{ (kg·m}^2)$$

J_L: Load Inertia of Motor Shaft Conversion (kg·m²)
J_W: Load Inertia (kg·m²)
J_1: Gear Inertia on Motor Side (kg·m²)
J_2: Gear Inertia on Load Side (kg·m²)
Z_1: Number of Gear Teeth on Motor Side
Z_2: Number of Gear Teeth on Load Side
Gear Ratio G = Z_1/Z_2

●Calculate Motor Shaft Conversion Torque and Effective Torque

Calculate the acceleration torque from the load torque calculated from both the motor shaft conversion value and the motor rotor inertia. Then Combine this acceleration torque and the Load torque calculated from the friction force and the external force that are applied to the load. Now you get the required torque to operate a motor.

Acceleration Torque

Speed (Rotations)

Acceleration Time (s)
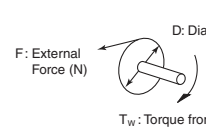

Acceleration Torque (T_A)

$$T_A = \frac{2\pi N}{60 t_A} \left(J_M + \frac{J_L}{\eta} \right) \text{(N·m)}$$

T_A: Acceleration/Deceleration Torque (N·m)
J_L: Motor Shaft Conversion Load Inertia (kg·m²)
J_M: Inertial of Motor Itself (kg·m²)
η : Gear Transmission Efficiency
N : Motor Rotation Speed (r/min)
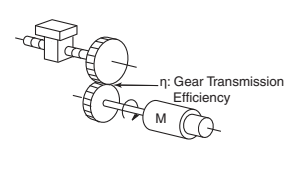

Motor Shaft Conversion Load Torque (External Force/Friction)

D: Diameter (mm)

$$T_W = F \cdot \frac{D}{2} \times 10^{-3} \text{(N·m)}$$

F : External Force (N)

(Friction is generally,
F = μW   μ: Friction Coefficient
W: Mass of Moving Part)

T_W: Torque from External Force (N·m)

$$T_L = T_W \cdot \frac{G}{\eta} \text{ (N·m)}$$

η: Gear Transmission Efficiency

T_1: Motor Shaft Conversion Load Torque (N·m)
T_W: Load Torque (N·m)
Z_1: Number of Gear Teeth on Motor Side
Z_2: Number of Gear Teeth on Load Side
Gear (Deceleration) Ratio G = Z_1/Z_2

• Calculation of Total Torque and Effective Torque

Effective Torque: T_{RMS} (N·m)

$$= \sqrt{\frac{\Sigma (T_i)^2 \cdot t_i}{\Sigma t_i}} = \sqrt{\frac{T_1^2 \cdot t_1 + T_2^2 \cdot t_2 + T_3^2 \cdot t_3 + T_4^2 \cdot t_4}{t_1 + t_2 + t_3 + t_4}}$$

Maximum Torque: $T_{MAX} = T_1 = T_A + T_L$
Note: Please make use of the Servo Motor selection software, which can calculate the motor shaft conversion inertia and effective/maximum torque, as above.

●Motor Selection

Use the formula below to calculate the motor capacity from the effective torque and the maximum torque that were obtained above. Select the larger of the two generated values as the motor capacity. Select a motor the capacity of which is larger than the calculated value and makes allowance for an error.

• Motor Capacity corresponding to Effective Torque

Motor Capacity (kW) = $1.048 \cdot N \cdot T_{RMS} \cdot 10^{-4}$
N: Maximum Rotations (r/min)

• Motor Capacity capable of Providing Maximum Torque

Motor Capacity (kW) = $1.048 \cdot N \cdot T_{MAX} \cdot 10^{-4}/1.5$
N: Maximum Rotations (r/min)

Inverter Capacity Selection

Select an inverter that can be used for the selected motor in the process of "Motor Selection".

Generally, select an inverter which fits the maximum applicable motor capacity of the selected motor.

After selecting an inverter, check if it meets with all of the following conditions. If it does not, select an inverter that has a one class larger capacity and check the feasibility again.

Motor Rated Current ≤ Inverter Rated Output Current
Maximum Time of Continuous Torque Output Time in an Application ≤ 1 minute

Note: 1. Where the inverter overload capacity is "120% of Rated Output Current for 1 minute", check it for 0.8 minute.
2. Where a 0 Hz sensor-less vector control is being used, or where torque must be maintained for 0 (r/min) rotation speed and where 150% of the rated torque is frequently required, use an invertor which is one rank larger than the one selected by the above method.

Outline of Braking Resistor Selection

Importance of Braking Resistor

If the regenerative energy generated in deceleration or descent in an application is too great, the main circuit of an inverter may have an increased voltage and it may be damaged.

Because the inverter usually contains the overvoltage LAD stop function, it is not actually damaged. However, the motor stops detecting an error, making a stable and continuous operation disabled. Therefore, you must discharge the regenerative energy outside of the inverter.

● What is Regenerative Energy?

A load connected to a motor has kinetic energy when rotating, and potential energy when it is located in a high position. When the motor decelerates, or when the load descends, the energy is returned to an inverter. It is known as regeneration, and the energy generated by the phenomenon is known as regenerative energy.

Inverter   Motor   Load

Kinetic Energy

Potential Energy

Regenerative Energy

"When decelerating, the motor becomes a generatorand its kinetic/potential energyis changed into regenerative energy."
● Preventing Breaking Resistence

The following are methods to prevent the connection of braking resistance.

These methods will make the deceleration time increase, so check if it will not cause problems.

• Enable the deceleration stall prevention (enabled in factory settings) (It will automatically increase deceleration time not to cause an overvoltage to stop the motor).

• Set a longer deceleration time. (Cause the regenerative energy to decrease per unit of time.)

• Disable Free-Run. (Prevent the regenerative energy from returning to an inverter.)

Make a Simple Selection for Braking Resistors

It can be a simple selecting method by using the ratio of time in which regenerative energy is produced in a normal operating pattern. Calculate the usage ratio from the following operating pattern.

Next cyclic operation

t

T
Usage Rate = t/T × 100 (% ED)

t : Deceleration Time (Regenerative Time)
T : Single Cycle Operation Time

%ED is the unit used for a usage rate.
The usage rate is used as the ratio of deceleration time (regenerative operation time) to simplify the selection of the braking options.

● For Models with a Built-in Braking Circuit (3G3MX2 Max. 22 kW)

Select the braking resistor based on the usage rate calculated from the operation patterns.

Refer to the braking resistor list described in the User's manual and catalog, and connect it according to your Inverter.

When the usage ratio for the braking resistor selected on the previous page exceeds 10% ED, or when an extremely large braking torque is required, use the method below to calculate a regenerative energy and make your selection.

● Calculation of Required Braking Resistor

Maximum Rotations N (r/min) The energy is proportional to the square of the speed,So the Regenerative Energyis momentarily at a peak value.

Maximum Deceleration Torque T (N·m) If the Motor Rotating Direction and the MotorTorque Direction are different, Regenerative Energy will be produced.
Breaking Resistance Resister: $R \leq \dfrac{V^2}{1.048 \times (T - 0.2 \times Tm) \times N \times 10^{-1}}$

V: 200V class inverter 362.5 (V)
　400V class inverter 725 (V)
T: Maximum Braking Torque (N·m)
Tm: Motor Rated Torque (N·m)
N: Maximum Rotation Speed (r/min)

Note: Calculate a braking torque using the above "Motor Capacity Selection".

● Calculation of Average Regenerative Energy

Regenerative Energy is produced when the motor rotation direction and the torque direction are opposite.
Use the following formula to calculate a regenerative energy per cycle interval.

$Pi = N \times T \times t \times 1.048 \times 10^{-1}$
Pi : Sectional i Regenerative Energy (J)
N: Motor Rotation Speed (r/min)
　When the number of Rotations changes
　Take an average value
　e.g. For Straight-Line Deceleration
　　(N max + N min)/2
T: Deceleration Torque (N/m)
t: Deceleration Time (s)

· Sum all of the Regenerative Energy in a cycle interval and divide it by the cycle time to calculate the time average, shown as below.

Average Regenerative Energy (W) =
$\dfrac{(P1 + P2 + \cdots + Pi)\ (J)}{\text{Single Cycle Time (s)}}$

Note: 1. Forward rotation direction is forward for the speed, and the torque in the forward rotation direction is forward for the torque.
　　　2. Calculate a braking torque using the above "Motor Capacity Selection".

● Braking Resistor Selection

Select a Braking Resistor from the required braking resistance and average regenerative energy on the left.
- Required Braking Resistence ≥ Resistence of Braking Resistor ≥ Minimum Connection Resistence of Invertor or Regenerative Braking Unit
- Average Regenerative Energy ≤ Permissible Power for Braking Resister

Note: 1. If a resistance that has a less then the minimum connectable value is connected on an inverter or regenerative braking resistor unit, the internal breaking transistor can be damaged. When the required braking resistance is less than the minimum connectable resistance, change the inverter or regenerative energy braking to the one having a larger capacity and a minimum connection resistance less than the required braking resistance.
　　　2. Two or more regenerative braking units can be operated in parallel. Refer to the following formula to know the braking resistance value in such a case.
Braking Resistence(Ω) = (Required Braking Resistance as calculated above) × (No. of Units in use)
　　　3. Do not use the above formula to select a generative braking resistance value. 150W does not reflect a permissible power capacity, but the maximum rated power per unit of resistance. The actual permissible power varies according to a resistance.
