

Programmable Controller

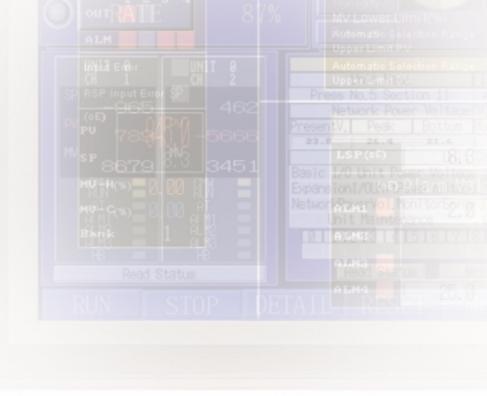

NSJ Series, NSJ

Combining the controller and HMI into a single unit contributes to downsizing and standardizing control panels, while eliminating inefficiency, waste, and inconsistency on production sites.

A New Single-package Concept

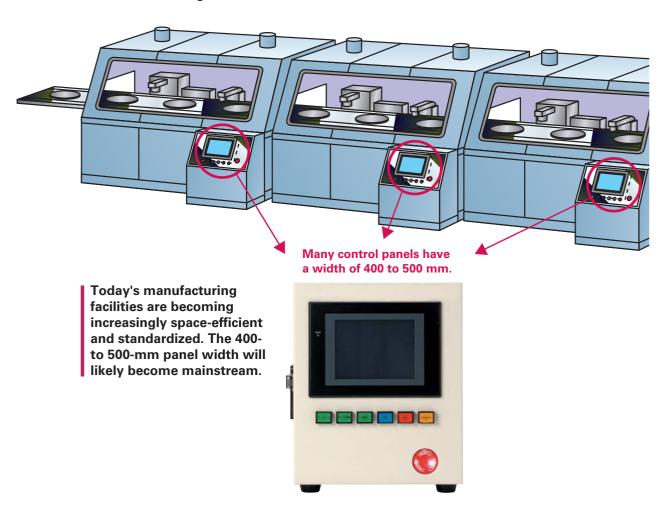

As demands continue to grow for smaller control panels to save space in today's production facilities, OMRON has shown the way with a unique solution -- the SYSMAC One NSJ-series One-package Controller. Its compact size is an ideal fit for the 400- to 500-mm control panel widths that are becoming increasingly common, and it completely eliminates the space that was previously necessary for the PLC. While helping to standardize control panels, the NSJ Series also solves a variety of manufacturing industry problems by raising the levels of efficiency in design and maintenance.

Ordering Information and Specifications	19

Greater Control Panel Downsizing and Standardizing

As production becomes increasingly globalized, the needs for standardized control panels are growing. With its new, one-package concept, the SYSMAC One NSJ Series contributes to reducing both hardware and software requirements for control panels. While offering the same convenient operation for control panels in any factory, any process, and any device worldwide, the NSJ Series eliminates various forms of inefficiency, waste, and inconsistency that extend all the way from device design and installation, to maintenance.

No More PLC Space Required.

The PLC comes as standard equipment along with the HMI.

The Display Section and Controller Section each have a CPU. Control is highly reliable because it is not affected by the designing and communications of the Display Section.

A DeviceNet Master comes as standard equipment for I/O.

There is no need for initial settings, and wiring is greatly reduced. Also standardization and streamlining design can be realized.

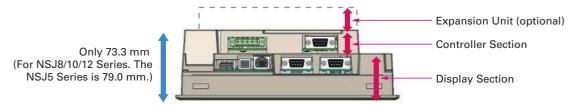

Efficient use of the space inside the control panel.

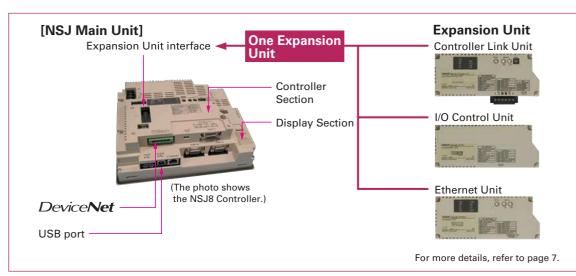

Since there is no PLC space required, the space inside the control panel can be more efficiently used. For example, it can be used to mount the power supply, breakers, or terminal blocks directly behind the Display Section.

Especially slim at 73.3 mm.

Both the Display Section and Controller Section combined have a width of only 73.3 mm*. There is also no need for a PLC Power Supply Unit. (*For the NSJ8/10/12 Series. The NSJ5 Series is 79.0 mm.)

NSJ Series Appearance and Parts Names

A Wide Selection of Scalable Display **Controllers**

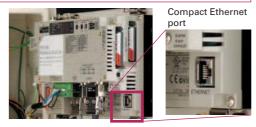

Product Line-up Select the optimal control and display combination.

Four screen sizes are available, from 5.7 to 12.1 inches.

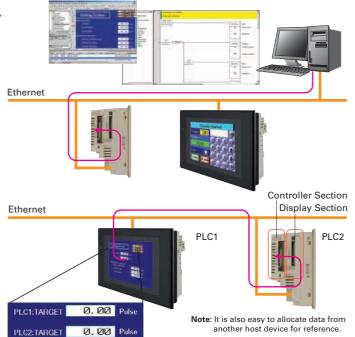

NSJ Built-in Ethernet Port Easy access to both Display Section and Controller Section

This allows PLC data to be read or written without adding an Ethernet Unit. PLC data can also be read or written, and alarms and recipes can be transferred, from a host computer.

Easy Access from a Host Computer

- Screen data and ladder programs can be easily transferred via Ethernet.
- PLC data can also be read by a host application (using FINS communications).

Set3.

Easy Access to Other PLCs

•PLC2 data can be easily displayed and set from the NSJ (PLC1) display.

Expansion Units

Support a wider range of applications.

Controller Link Unit (NSJW-CLK21-V1)

High-speed, large-capacity data link

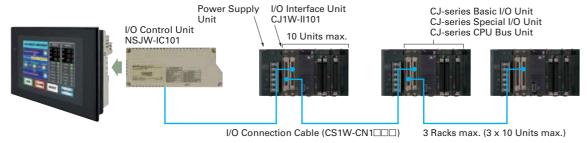

The PLC data link function can be used to provide a high-speed, large-capacity data link between Controllers.

I/O Control Unit (NSJW-IC101)

Easy addition of Special I/O Units and CPU Bus Units

Used to mount Motion Control Units and other Special I/O Units or CPU Bus Units to the NSJ-series Controller, for excellent expandability.

Ethernet Unit (NSJW-ETN21)

Full use of versatile Ethernet functions

The NSJ built-in Ethernet port increases expandability with host computers by enabling functions such as communications implemented with CMND instructions and e-mail.

Ethernet 100BASE-TX

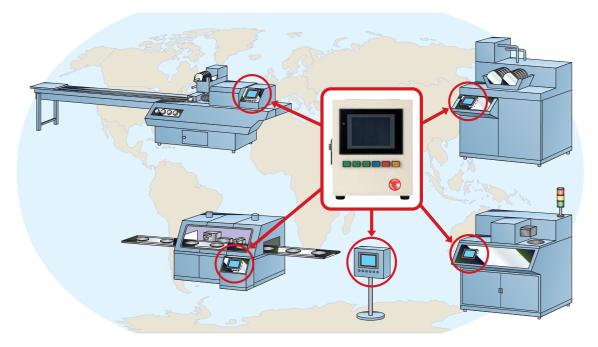

Note: For detailed information on functions related to the NSJ built-in Ethernet port and Ethernet Unit, refer to page 28.

Meeting the Growing Needs for Control Panel Standardization

The Market Is Moving Toward Standardized Control Panels.

With production bases becoming increasingly globalized, do you have the following concerns about shipping domestically manufactured devices?

- 1 Reduce downtime due to operator error
- 2 Providing on-site operator training
- 3 Smoothly procuring maintenance parts when a malfunction occurs
- 4 The need to raise development efficiency for devices and facilities

Effects of Standardizing Control Panels

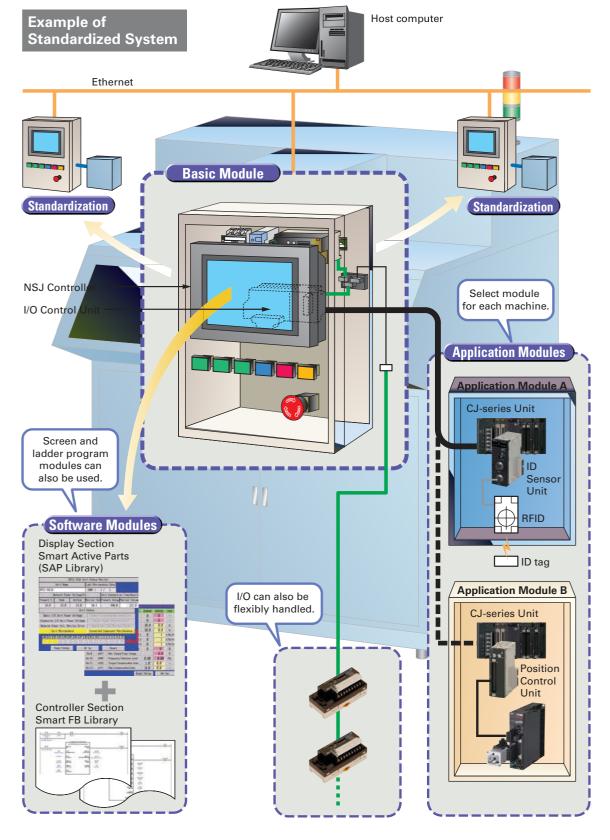

Waste and inconsistency in design, installation and maintenance can be eliminated by supplying control panels that have the same basic operation regardless of the factory, the process, and the devices used in any country of the world.

- Operating errors can be prevented by providing the same operability.

 Reduce temporary lower operating efficiency caused by changing operators.
- There is no need to produce an operating manual for each device. Initial training cost can also be reduced.
- Standardization greatly reduces the number of maintenance parts.

 Even if a malfunction occurs, the entire control panel can be replaced as a module for quick and easy system restoration.
- Standardization makes it possible to create templates for design documents, screens, and ladder programs. This increases the ability to reuse the templates, which greatly raises design efficiency.

By standardizing control panels based on SYSMAC One, design steps can be reduced and software assets can be reused to eliminate waste and inconsistency all the way from the design stage to system startup.

Less Effort in Designing and Debugging

Advantages of One Package

Use of a single USB cable simplifies both design and debugging.

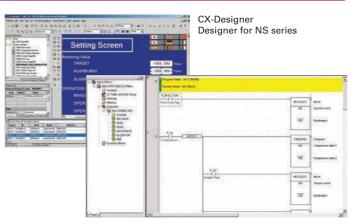

Use of a commercially available USB cable allows easy, high-speed transferring of screen data and ladder programs. There is also no need to change cables for transfers such as these

(2) Simply connect the USB cable and you are ready to transfer screen data and ladder programs.

Continue using your software assets.

Continue to use all the screen data for NS-series PTs and ladder programs for CS/CJ-series PLCs.

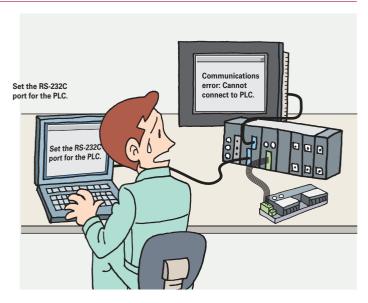

CX-Programmer Ladder Programming Software

Simply turn ON the power and start using it. No need for initial settings.

There is no need to connect the Controller Section and Display Section, and no need to make initial communications settings or other settings.

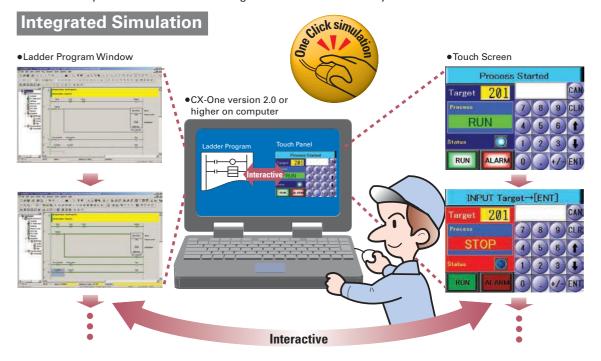

The system starts up as soon as the power is turned ON. Even the standard-equipped DeviceNet Master is completely set in the default settings.

The CX-One Integrated FA Tool Package Is Available

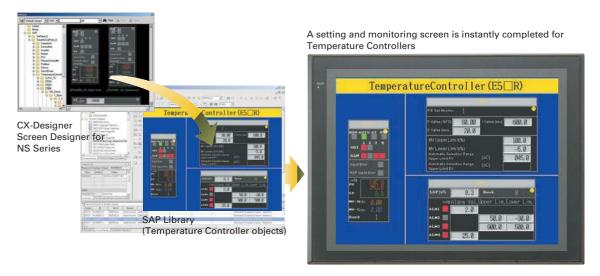

This software can be used to debug ladder programs and screens without even having to connect to an actual system.

The test functions of the CX-Designer Screen Designer for NS Series have been further strengthened. By selecting CX-Simulator as the connection destination, screen data and ladder programs can be simultaneously tested without even having to connect to an actual system.

The SAP Library, which dramatically reduces effort in design, has also been greatly expanded.

More than 2,000 Smart Active Parts (SAP) are available for directly accessing OMRON PLCs and components. Simply copy them from the library and paste them onto the screen. There is absolutely no need to design screens or ladder programs for these objects.

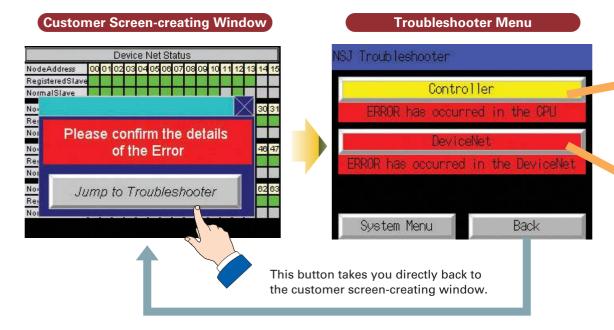

Less Effort in Maintenance

Two Troubleshooters Come as a Standard Feature

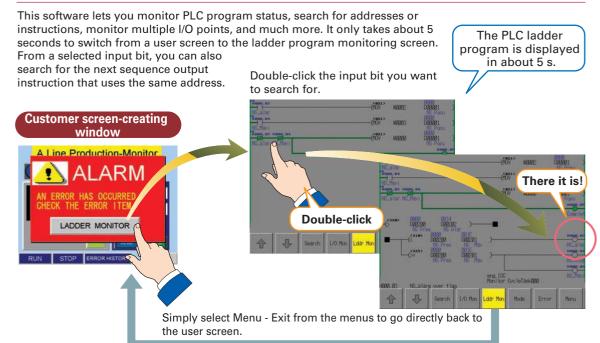

Enables a quick, on-site action without any software.

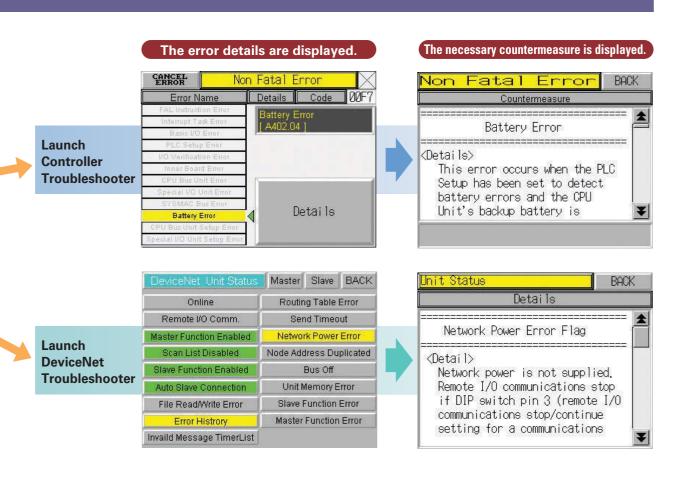

The standard-equipped PLC Troubleshooter and DeviceNet Troubleshooter contribute to solving problems during device startup and operation. When an error occurs, simply follow the on-screen instructions to confirm the error details and quickly implement countermeasures, without referring to the manual.

A Ladder Program Monitor Is Also Standard

Switching from the operation screen to the screen for monitoring PLC ladder programs only takes about 5 seconds.

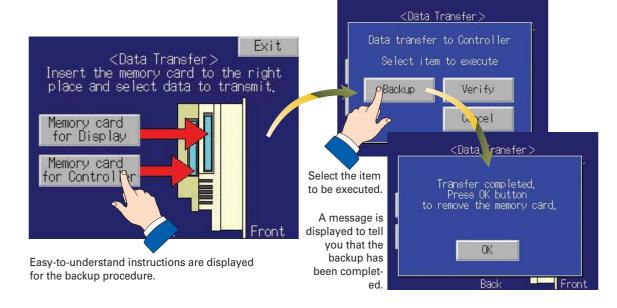

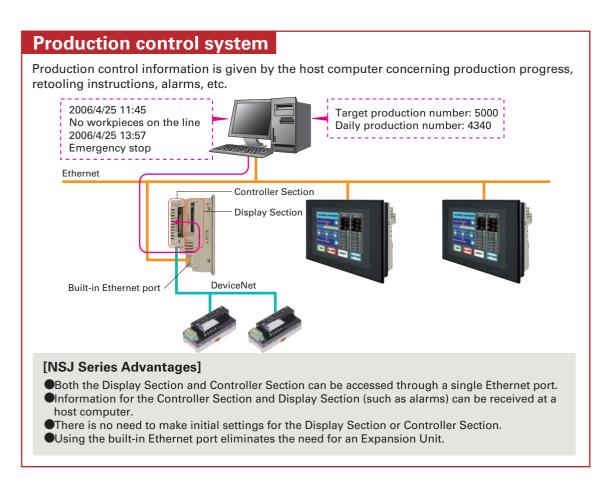

A Data Backup Function Is Also Standard

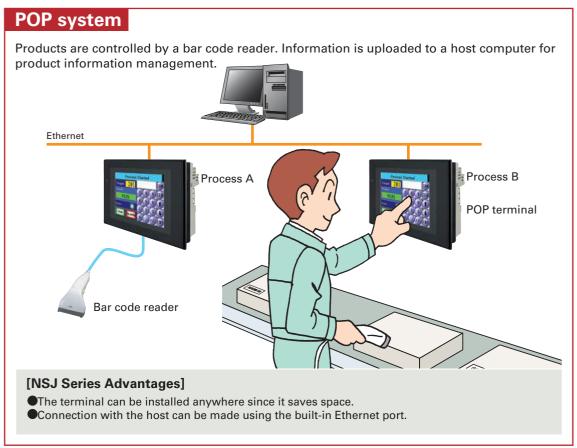

Easy backup without a computer.

Simply follow the on-screen instructions to back up both screen data and ladder programs for the Controller Section.

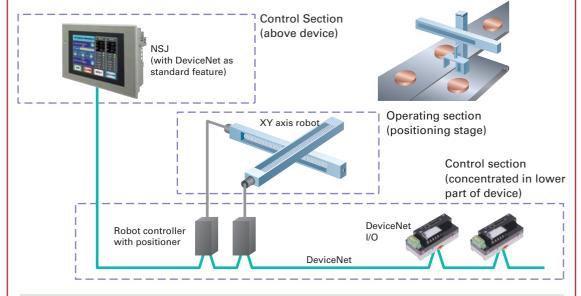

Application Examples

Simple positioning control

Simple positioning control can be achieved by connecting the NSJ to a robot controller.

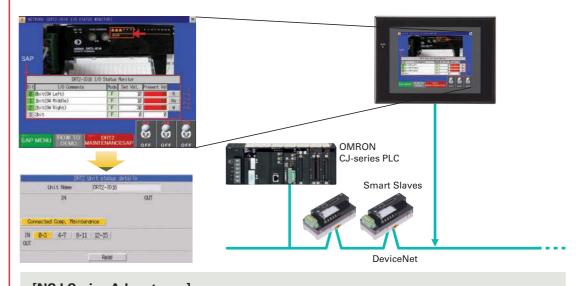

[NSJ Series Advantages]

- Simple positioning control can be achieved with minimal wiring by directly connecting the NSJ to a robot controller.
- ■I/O can also be directly connected to reduce wiring.
- There is no more need for PLC space in the bottom of the control panel.

DeviceNet monitoring

The smart functions of various slaves connected to DeviceNet can be monitored.

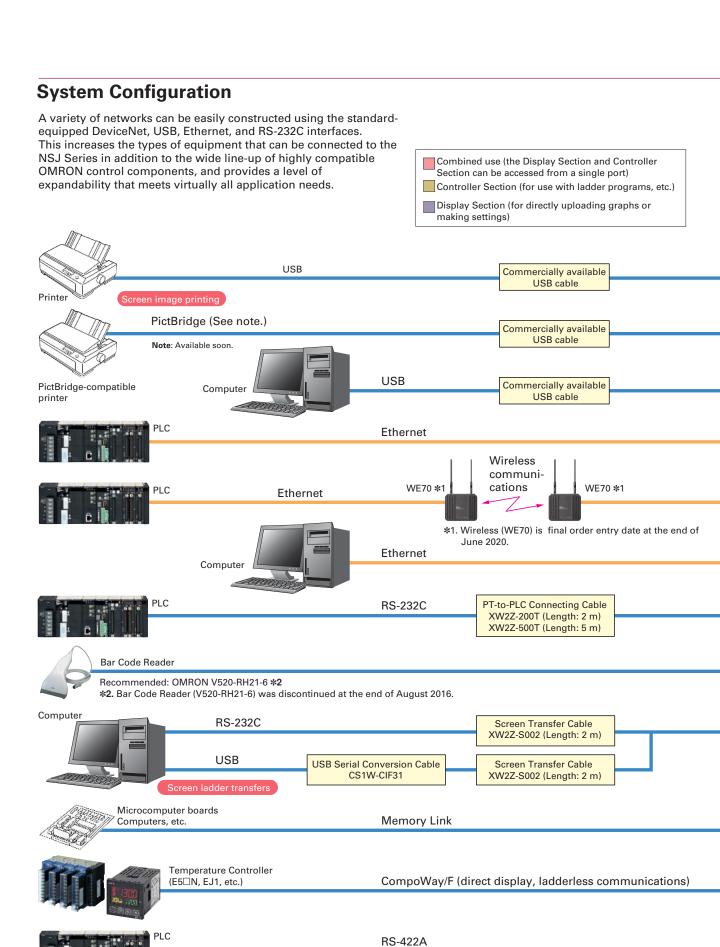

Example: By using a Slave Unit to count the number of ON/OFF operations for a device, or to count the total operating hours, the NSJ can inform the operator when it is time to conduct maintenance.

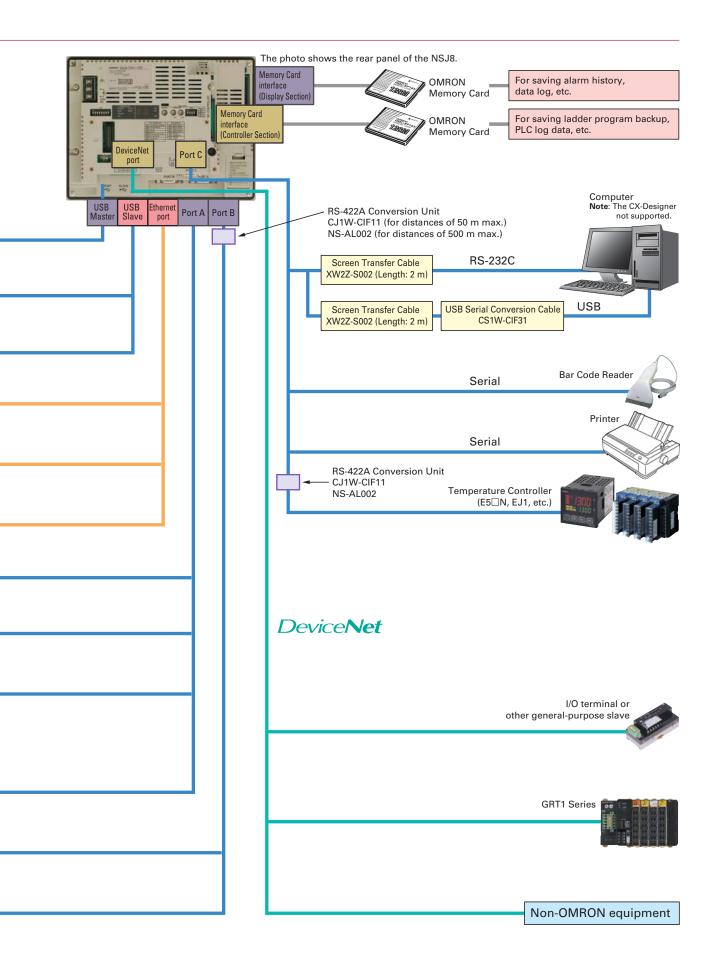

[NSJ Series Advantages]

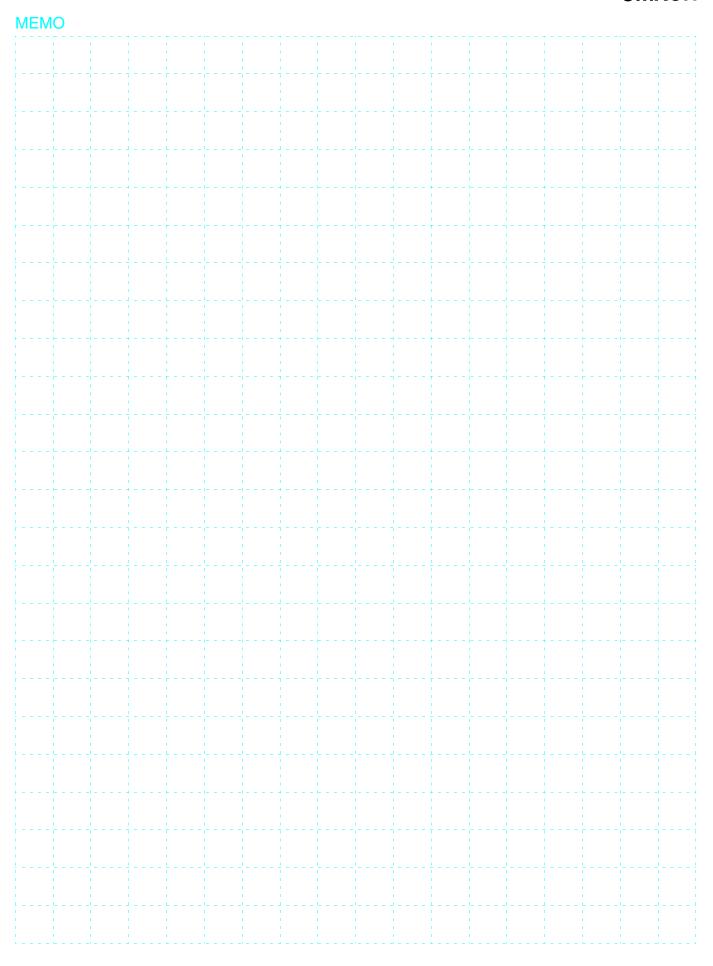

- •Monitoring and diagnostic functions can be added to the control panel.
- •Wiring and space requirements are reduced, and the NSJ can be added on later.
- The number of design steps can be reduced for screen design and ladder programming by using the Smart Active Parts (SAP) Library and troubleshooter functions.

Suitable to a Wide Range of Applications

International Standards

- The standards are abbreviated as follows: U: UL, U1: UL (Class I Division 2 Products for Hazardous Locations), C: CSA, UC: cULus, UC1: cULus (Class I Division 2 Products for Hazardous Locations), CU: cUL, N: NK, L: Lloyd, and CE: EC Directives.
- Contact your OMRON representative for further details and applicable conditions for these standards.

•EC Directives

The EC Directives applicable to PLCs include the EMC Directives. OMRON complies with these directives as described below.

● EMC Directives

Applicable Standards EMI: EN61131-2

EN61000-6-4 EMS: EN61131-2 EN61000-6-2

PLCs are electrical devices that are incorporated in machines and manufacturing installations. OMRON PLCs conform to the related EMC standards so that the devices and machines into which they are built can more easily conform to EMC standards. The actual PLCs have been checked to ensure conformity to EMC standards. Whether these standards are satisfied for the actual system, however, must be checked by the customer.

EMS-related performance will vary depending on the configuration, wiring, and other conditions of the equipment or control panel in which the PLC is installed. The customer must, therefore, perform final checks to confirm that the overall machine or device conforms to EMC standards

Note: The applicable EMS standards depend on the product.

Battery life		5 years (at 25°C) The SRAM and RTC will be backed up for 5 days after the battery runs low (i.e., after the indicator lights orange). The SRAM and RTC will be backed up by a super capacitor for 5 minutes after removing the old battery (i.e., after turning ON power after 5 minutes).				
International	standards	Conforms to cULus and	EC Directives.			

Note 1. A delay circuit that charges a capacitor is used to limit the inrush current. If a hot start is performed when the power supply has been OFF only a short period of time, the capacitor will still be charged and the inrush current specified above will be exceeded by up to approximately five times the specified value. When selecting fuses or breakers for external circuits, allow sufficient margin in the melting temperatures, detection characteristics, and inrush current

Note 2. Display angles off horizontal are as follows:

Note 3. For detailed information, refer to "Dimensions" on page 30. Note 4. May not be applicable in locations with long-term exposure to oil.

Trace Memo	ry	4,000 words (traceable data: 31 bits and 6	6 words)					
File Memory		Memory Cards: Compact flash memory c EM file memory: Part of EM Area can be The NSJ(B)-M3D does not supp	converted to file memory (MS-DOS format).					
	Constant cycle time	1 to 32,000 ms (Unit: 1 ms) Note: Using the Parallel Processing Mode	to 32,000 ms (Unit: 1 ms) lote: Using the Parallel Processing Mode will create a constant cycle time for program execution.					
	Cycle time monitoring	Possible (Unit stops operating if cycle is too long): 10 to 40,000 ms (Unit: 10 ms) Note: When the Parallel Processing Mode is used, the program execution cycle is monitored. Controller Section operation will stop if the peripheral servicing time exceeds 2 s.						
	I/O refreshing	Cyclic refreshing, immediate refreshing, refreshing by IORF(097). Note: IORF(097) refreshes I/O bits allocated to Basic I/O Units and Special I/O Units. The CPU BUS UNIT I/O REFRESH (DLNK(226)) instruction can be used to refresh bits allocated to CPU Bus Units in the CIO and DM Areas.						
	Timing of refreshing for CPU Bus Units	Data links for Control Link Units, remote I/O communications for DeviceNet Units, and other special data for CPU Bus Units is refreshed at the following times. During I/O refresh period or when CPU BUS UNIT I/O REFRESH (DLNK(226)) instruction is executed.						
	I/O memory holding when changing operating modes	Depends on ON/OFF status of IOM Hold Bit in Auxiliary Area.						
	Load OFF	All outputs on Output Units can be turned OFF when the Controller Section is operating in RUN, MONITOR, or PROGRAM mode.						
	Timer/counter PV refresh method	BCD or binary (CX-Programmer version 3.0 or higher)						
	Input time constant setting	Time constants can be set for inputs from CJ-series Basic I/O Units. The time constant can be increased to reduce influence of noise and chattering or it can be decreased to detect shorter pulses on inputs.						
Functions	Mode setting at power-up	The operating mode can be specified.						
	Flash memory	 The user program and parameter area data (e.g., PLC Setup) are always backed up automatically in flash memory. (automatic backup and restore.) When downloading projects from CX-Programmer Ver. 5.0 or higher, symbol table files (including CX-Programmer s names, I/O comments), comment files (CX-Programmer rung comments, other comments), and program index files Programmer section names, section comments, or program comments) are stored in comment memory within the fl memory. 						
		Automatically reading programs (autoboot) from the Memory Card when the power is turned ON.	Possible					
	Memory Card	Program replacement during Controller Section operation	Possible					
	functions (Controller Section)	Memory Card storage data	User program: Program file format PLC Setup and other parameters: Data file format I/O memory: Data file format (binary), text format, CSV format					
		Memory Card read/write method	User program instructions, Programming Devices (including CX-Programmer and Programming Console), Host Link computers, Auxiliary Area control bits, 6 backup operation					
	Filing (Controller Section)	Memory Card data and EM (Extended Data Memory) Area can be handled as files.						
	Debugging	Force-set/reset, differential monitoring, data tracing (scheduled, each cycle, or when instruction is executed), storing location generating error.						

Controller Section Specifications

	Item	Specifications					
	Online editing	User programs can be overwritten in program block units when the Controller Section is in MONITOR or PROGRAM mode. This function is not supported for block programming areas. With the CX-Programmer, more than one program block can be edited at the same time.					
	Program protection	verwrite protection: Set using DIP switch or via the password from CX-Programmer peripheral device. ppy protection: Password set using CX-Programmer.					
	Error check	User-defined errors (i.e., user can define fatal errors and non-fatal errors) The FPD(269) instruction can be used to check execution time and logic of each programming block. Note: FAL and FALS instructions can be used to simulate errors.					
	Error log	Up to 20 errors are stored in error log. Information includes error code, error details, and time error occurred. Note: The Controller Section can be set so that user-defined FAL errors are not stored in the error log.					
		Provided on all models. Accuracy:					
	Clock	Ambient temperature Monthly variation					
		25°C -1.5 to +1.5 min					
		Note 1. Accuracy varies with the temperature. Note 2. Used to store time when power is turned ON and when errors occur.					
	Power OFF detection time	? ms					
Functions	Power OFF detection delay time	0 ms fixed					
rundions	Memory protection	leld Areas: Holding bits, Data Memory, Extended Data Memory, and status of counter Completion Flags and present values. Iote: If IOM Hold Bit in Auxiliary Area is turned ON, and PLC Setup is set to maintain IOM Hold Bit status when power to the NSJ Controller is turned ON, contents of CIO Area, Work Area, part of Auxiliary Area, timer Completion Flag and present values, Index Registers, and Data Registers will be saved.					
	Sending commands to a Host Link comput- er	FINS commands can be sent to a computer connected via Host Link System by executing Network Communications Instructions from the Controller Section.					
	Remote programming and monitoring	lost Link communications can be used for remote programming and remote monitoring through a Controller Link System or Ethernet network.					
	Eight-level communications	Host Link communications can be used for remote programming and remote monitoring from devices on networks up to eight levels away (Controller Link Network, Ethernet Network, or other network).					
	Storing comments in CPU Unit	I/O comments can be stored as symbol table files in Memory Cards in the Controller Section, EM file memory, or Comment Memory (see note). Note: Supported for CX-Programmer Ver. 5.0 or later only.					
	Program check	Program checks are performed at the beginning of operation for items such as no END(001) instruction and instruction errors. CX-Programmer can also be used to check programs.					
	Battery life	5 years at 25°C (The battery life depends on the ambient operating temperature; 1.1 years min.) (Battery set: CJ1W-BAT01; Use a Replacement Battery that is within two years of its date of manufacture.)					
	Self-diagnostics	Controller Section errors (watchdog timer), I/O bus errors, memory errors, and battery errors					
	Other functions	Storage of number of times power has been interrupted. (Stored in A514.)					

Display Section Specifications

Model	Built-in ports					Display Section

Communications Section Specifications

■DeviceNet Section

Item	Specifications						
Communications protocol	De	DeviceNet					
DeviceNet master/slave	Ca	Can function as master or slave.					
Connection forms (See note 1.)	Co	Combination of multi-drop and T-branch connections (for trunk or branch lines)					
Terminating resistance.	S١	SW4 (TER) is used to connect/disconnect terminating resistance. The TER indicator lights when terminating resistance is connected.					
Baud rate	50	500 kbps, 250 kbps, or 125 kbps (Set via DIP switch.)					
Communications distances		Baud rate 500 kbps 250 kbps 125 kbps	Network length 100 m max. 250 m max. (See note 2.) 500 m max. (See note 2.)	Branch line length 6 m max. 6 m max. 6 m max.	Total branch line length 39 m max. 78 m max. 156 m max.		
Max. number of Slaves	63 Slaves						
Error control	CRC error check, node address redundancy check, scan list verification						
Cable	Special 5-wire cable (2 signal lines, 2 power lines, 1 shield line)						

 $[\]textbf{Note 1.} \ \textbf{Terminating resistance is required at both ends of the trunk line.}$

■Controller Link (Wired)

Item	Specifications				
Communications method	N: N token bus				
Code	Manchester code				
Modulation	Baseband code				
Synchronization	Flag synchronization (conforms to HDLC frames)				
Error control	Manchester code checks and CRC checks (CCITT X16+X12+X5+1)				
Transmission path form	Multi-drop bus				
Baud rate and maximum transmission distance	The maximum transmission distance varies with the baud rate as follows: 2 Mbps: 500 m 1 Mbps: 800 m 500 Kbps: 1 km				
Media	Specified shielded twisted-pair cable Number of signal lines: 2, shield line: 1				
Node connection method	NSJ Controller Link Unit: Connected via a special connector (included) PLC: Connected to a terminal block IBM PC/AT or compatible: Connected via a special connector (included)				
Maximum number of nodes	32 or 62 nodes (See note 1.)				
Communications functions	Data links and message service				
Number of data link words	Transmission area per node: 1,000 words max. Data link area (send/receive words) per node NSJ Controller: 20,000 words CS/CJ Series: 20,000 words max. (unit Ver. 1.2 or later) 12,000 words max. (pre-Ver. 1.2) SYSMAC α, CVM1/CV, CQM1H: 8,000 words max. Personal computer: 32,000 or 62,000 words max. (See note 2.)				
Data link areas	Bit-access areas (IR, AR, LR, CIO), DM Area (DM), and extended DM Area (EM)				
Message length	2,012 bytes max. (including the header)				
RAS functions	Polling node backup function Self-diagnosis function (hardware checking at startup) Echoback test and broadcast test (using the FINS command) Watchdog timer Error log function				

Note 1. At least one Repeater Unit (CS1W-RPT01) is required to construct networks that uses a node address higher than 32. The following Controller Link Units/Support Boards must also be used, and the Wired Network 62 Node Enable Bit of the DM Parameter Area software switch of all nodes must be turned ON (62 nodes max.).

CS1W-CLK23, CJ1W-CLK23, 3G8F7-CLK23, and NSJW-CLK21-V1

Note 2. For a maximum configuration of 62 nodes

For other specifications, refer to the Controller Link Unit Operation Manual (Cat. No. W309).

Note 2. Communications distances are for Thick Cables. Keep the maximum network length to 100 m or less when using Thin Cables.

Communications Section Specifications

■Ethernet Unit

Item	Specifications				
Туре	100Base-TX (can be used as 10Base-T)				
Media access method	CSMA/CD				
Modulation method	Baseband				
Transmission paths	Star form				
Baud rate	100 Mbps (100Base-TX) 100 Mbps (10Base-T)				
Transmission media	Unshielded twisted-pair (UTP) cable Categories: 5, 5e Shielded twisted-pair (STP) cable Categories: 100Ω at 5, 5e	Unshielded twisted-pair (UTP) cable Categories: 3, 4, 5, 5e Shielded twisted-pair (STP) cable Categories: 100 Ω at 3, 4, 5, 5e			
Transmission distance	100 m (distance between hub and node)				
Number of cascade connections	2	4			
Functions	FINS communications service Socket services (UDP/TCP) FTP server Email send/receive Automatic clock adjustment				

Note: Refer to the Ethernet Units Construction of Networks Operation Manual (Cat. No. W420) and the Ethernet Units Construction of Applications Operation Manual (Cat. No. W421) for other specifications.

■Differences between the Built-in Ethernet and Ethernet Unit Ports

	Built-in Ethernet port	Ethernet Unit port		
Communications with another host (PLC) Ethernet NSJ NSJ PLC	Communications is possible with another host via Ethernet. For example, from one NSJ Controller, data can be displayed or settings can be made to another NSJ Controller or PLC.	Same functions as at left.		
Connection with a host computer Host computer Ethernet NSJ	■Support Software Connections CX-One (CX-Programmer, CX-Designer, etc.) can be used via Ethernet. Screen data and ladder programs can be transferred from a host computer. ■Access to a Memory Card in the Display Section A memory card in the Display Section can be accessed using Support Software or FTP and Ethernet. For example, Display Section recipe data and alarm or data log files can be downloaded from a host computer. ■Access to the Host from a Host Application A host computer can access the Controller Section using FINS communications. For example, an application on a host computer can read or data can be written to the NSJ data memory (DM) (UDP only).	Same functions as at left, plus the following: • A Memory Card in the Controller Section can be accessed. • The clock can be set using SNTP • TCP/IP support (See note.) (The Memory Card in the Display Section cannot be accessed.) Note: Ethernet (FINS/TCP) not supported by CX-Programmer.		
E-mail		E-mail can be sent and received.		
Communications using ladder programming		Socket communications are possible using the CMND instruction. SEND/RCV instructions		

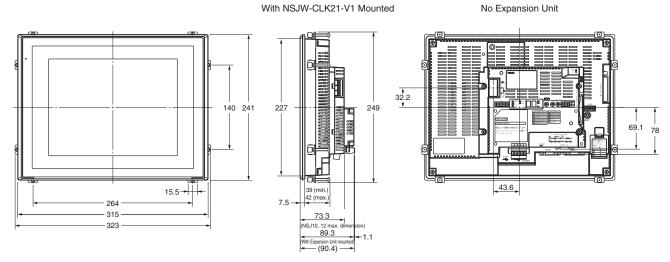

Support Software

■Ordering Information

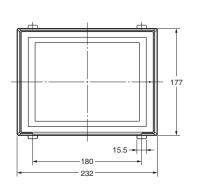

Product name	Specifications	Model	Standards		
		Number of licenses	Media	Wiodei	Stanuarus
FA Integrated Tool Package CX-One Ver.4.□	The CX-One is a comprehensive software package that integrates Support Software for OMRON PLCs and components. CX-One runs on the following OS. Windows 7 (32-bit/64-bit version) / Windows 8 (32-bit/64-bit version) / Windows 8.1 (32-bit/64-bit version) / Windows 10 (32-bit/64-bit version) CX-One Ver.4.□ includes CX-Designer Ver.3.□. For details, refer to the CX-One catalog (Cat. No. R134).	1 licence (See note.)	DVD	CXONE-AL01D-V4	

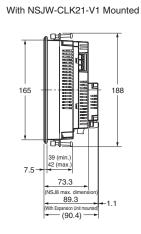

Note: Multi licenses (3, 10, 30, or 50 licenses) and DVD media without licenses are also available for the CX-One.

Read and Understand this Catalog

Please read and understand this catalog before purchasing the product. Please consult your OMRON representative if you have any questions or comments.

Warranty and Limitations of Liability

WARRANTY

OMRON's exclusive warranty is that the products are free from defects in materials and workmanship for a period of one year (or other period if specified) from date of sale by OMRON.

OMRON MAKES NO WARRANTY OR REPRESENTATION, EXPRESS OR IMPLIED, REGARDING NON-INFRINGEMENT, MERCHANTABILITY, OR FITNESS FOR PARTICULAR PURPOSE OF THE PRODUCTS. ANY BUYER OR USER ACKNOWLEDGES THAT THE BUYER OR USER ALONE HAS DETERMINED THAT THE PRODUCTS WILL SUITABLY MEET THE REQUIREMENTS OF THEIR INTENDED USE. OMRON DISCLAIMS ALL OTHER WARRANTIES, EXPRESS OR IMPLIED.

LIMITATIONS OF LIABILITY

OMRON SHALL NOT BE RESPONSIBLE FOR SPECIAL, INDIRECT, OR CONSEQUENTIAL DAMAGES, LOSS OF PROFITS, OR COMMERCIAL LOSS IN ANY WAY CONNECTED WITH THE PRODUCTS, WHETHER SUCH CLAIM IS BASED ON CONTRACT, WARRANTY, NEGLIGENCE, OR STRICT LIABILITY.

In no event shall the responsibility of OMRON for any act exceed the individual price of the product on which liability is asserted.

IN NO EVENT SHALL OMRON BE RESPONSIBLE FOR WARRANTY, REPAIR, OR OTHER CLAIMS REGARDING THE PRODUCTS UNLESS OMRON'S ANALYSIS CONFIRMS THAT THE PRODUCTS WERE PROPERLY HANDLED, STORED, INSTALLED, AND MAINTAINED AND NOT SUBJECT TO CONTAMINATION, ABUSE, MISUSE, OR INAPPROPRIATE MODIFICATION OR REPAIR.

Application Considerations

SUITABILITY FOR USE

OMRON shall not be responsible for conformity with any standards, codes, or regulations that apply to the combination of products in the customer's application or use of the products.

Take all necessary steps to determine the suitability of the product for the systems, machines, and equipment with which it will be used.

Know and observe all prohibitions of use applicable to this product.

NEVER USE THE PRODUCTS FOR AN APPLICATION INVOLVING SERIOUS RISK TO LIFE OR PROPERTY WITHOUT ENSURING THAT THE SYSTEM AS A WHOLE HAS BEEN DESIGNED TO ADDRESS THE RISKS, AND THAT THE OMRON PRODUCTS ARE PROPERLY RATED AND INSTALLED FOR THE INTENDED USE WITHIN THE OVERALL EQUIPMENT OR SYSTEM.

PROGRAMMABLE PRODUCTS

OMRON shall not be responsible for the user's programming of a programmable product, or any consequence thereof.

Disclaimers

CHANGE IN SPECIFICATIONS

Product specifications and accessories may be changed at any time based on improvements and other reasons.

It is our practice to change model numbers when published ratings or features are changed, or when significant construction changes are made. However, some specifications of the products may be changed without any notice. When in doubt, special model numbers may be assigned to fix or establish key specifications for your application on your request. Please consult with your OMRON representative at any time to confirm actual specifications of purchased products.

DIMENSIONS AND WEIGHTS

Dimensions and weights are nominal and are not to be used for manufacturing purposes, even when tolerances are shown.

PERFORMANCE DATA

Performance data given in this catalog is provided as a guide for the user in determining suitability and does not constitute a warranty. It may represent the result of OMRON's test conditions, and the users must correlate it to actual application requirements. Actual performance is subject to the OMRON Warranty and Limitations of Liability.

Note: Do not use this document to operate the Unit.
