

14ft CAT 6A UTP Ethernet Patch Cable (Blue) E09-014BL

Cat6a was developed to achieve maximum distance of 90 meters for full 10-Gigabit network speeds. This robust spec will afford you the extra headroom across your network that Cat6 can not. The 500 Mhz performance is double that of Category 6 and five times the bandwidth capacity of Category 5e.

Our Cat6a patch cables are complete end-to-end solution and are tested for compliance with all EIA/TIA-568-C Category 6 specifications.

This particular cable is a blue UTP (Unshielded Twisted Pair) patch cable with molded boots (snagless installation) and extra protection for the RJ45 connector and clip. Cat6a cable includes a spline and ribbing to help ensure separation between the pairs which limits cross talk. The connectors are wired to the T568B standard. The individual conductors are 24 AWG (American wire gauge) stranded pure copper. Cat6a patch cables are stranded to improve flexibility. Pure copper conductors provide the best signal possible. The RJ45 plug features gold connectors to prevent corrosion thus ensuring a longer cable life.

without us, you are just not connected!
