Description

The CD74FCT240, CD74FCT240AT, CD74FCT244, and CD74FCT244AT three-state octal buffers/line drivers use a small geometry BiCMOS technology. The output stage is a combination of bipolar and CMOS transistors that limits the output HIGH level to two diode drops below V_{CC} . This resultant lowering of output swing (0V to 3.7V) reduces power bus ringing (a source of EMI) and minimizes V_{CC} bounce and ground bounce and their effects during simultaneous output switching. The output configuration also enhances switching speed and is capable of sinking 64mA.

The CD74FCT240, CD74FCT240AT, CD74FCT244, and CD74FCT244AT have active LOW output enables ($\overline{1OE}$, $2OE$).
