** Not available for all frequencies or temperature ranges.
 ** Referenced to the midpoint between minimum and maximum frequency value over operating Temperature Range.

NOTE: It is recommended that a 0.01 μ F bypass capacitor be connected between Vdd (Pin 4) and Ground (Pin 2) to minimize power supply noise.
 It is recommended that an external 0.01 μ F AC-coupling capacitor be connected to output (Pin 3) of the device.
 For the TXCO (I547), it is recommended that Pin 1 should not be left floating but be connected to Ground.
