

FIN1018

3.3V LVDS 1-Bit High Speed Differential Receiver

General Description

This single receiver is designed for high speed interconnects utilizing Low Voltage Differential Signaling (LVDS) technology. The receiver translates LVDS levels, with a typical differential input threshold of 100 mV, to LVTTTL signal levels. LVDS provides low EMI at ultra low power dissipation even at high frequencies. This device is ideal for high speed transfer of clock or data.

The FIN1018 can be paired with its companion driver, the FIN1017, or with any other LVDS driver.
