

ASMT-FJ10-AHJ00

Surface Mount AF Lamp

Description

The Broadcom[®] ASMT-FJ10-AHJ00 is a surface mount technology (SMT) dome lamp that uses an untinted, nondiffused lens to provide a high luminous intensity within a narrow radiation pattern. The device is made by encapsulating an LED chip on axial lead frame to form a molded epoxy lamp package with six bended leads for surfacing mounting.

This lamp type LED utilizes Aluminum Indium Gallium Phosphide (AlInGaP) material technology. The AlInGaP material has a very high luminous efficiency, capable of producing high light output over a wide range of drive currents. The color available for this SMT lamp package is 605-nm orange.

This narrow angle SMT lamp package is designed for applications that require long distance illumination and narrow beam pattern, such as an auxiliary flash for auto-focus function in a digital still camera. In order to facilitate pick-and-place operation, this SMT lamp is shipped in tape and reel, with 1000 units per reel. This package is compatible with Pb-free IR soldering process.

Eye Safety

This orange Surface Mount AF Lamp is used for a camera application. The LEDs have lenses, which focus the beam at about 10 mm from the front of the lens, from where the beam diverges relatively slowly. If the LEDs are placed in a product, they create a Class 1 LED to IEC/EN 60825-1 (2001) under all conditions of operation and single fault failure, as long as no collimating optics are added to the optical path.

Features

- Smooth, consistent narrow radiation pattern
- 8° view angle
- 4.8L × 4.8W × 5.33H mm package dimension
- Good intensity output
- Compatible with IR solder reflow
- Available in 16-mm tape on 15" (380mm) diameter reels
- Clear, non-diffused epoxy
- IEC/EN 60825-1 Eye Safety Class 1
- RoHS compliant

Applications

- Camera

CAUTION!

This LED is ESD sensitive. Please observe appropriate precautions during handling and processing. Refer to application note AN-1142 for additional details.

Orange	ASMT-FJ10-AHJ00	25.5	56.0	20	AllnGaP

NOTE:

1. The luminous intensity, I_V , is measured at the mechanical axis of the lamp package. The actual peak of the spatial radiation pattern may not be aligned with this axis.
2. I_V tolerance = $\pm 15\%$.

a. The dominant wavelength, λ_{D} , is derived from the CIE Chromaticity Diagram and represents the color of the device.

b. $\theta_{1/2}$ is the off-axis angle where the luminous intensity is $1/2$ the peak intensity.

c. Radiant intensity, I_e in watts/steradian, can be calculated from the equation $I_e = I_V/\eta_V$, where I_V is the luminous intensity in candelas and η_V is the luminous efficacy in lumens/watt
