# PiGRRL 2.0 Custom Gamepad PCB

PRODUCT ID: 3015

Description

This is the Custom Gamepad PCB for the PiGRRL 2 pack! The board is designed for use in portable gaming projects like the PiGRRL 2 but it's basically everything-you-need to make your very own DIY gaming project with GPIO input

We've dramatically cut the build time in half of the PiGRRL 2 pack by making this custom gamepad PCB. Just solder in 6mm tactile switch buttons and an 2x20 header or IDC box header to the gamepad PCB - No more tedious button wiring!

Comes with just the PCB! Best for people who already have the rest of the parts, or are doing a custom build. Check out the PiGrrl2 tutorial guide for schematics, details, files, and more.
