

HUMIDITY SENSOR KIT

UDOO Bricks are modules you can use to augment your UDOO boards and make them more versatile. Attach them into I2C snap-in connector with the related cable. UDOO Bricks work along a cascade configuration, so you can attach them all together without wasting space in a truly intuitive way. Thanks to such configuration you can use cables up to 3,5 m long to connect UDOO Bricks one another.

The Humidity Sensor Kit is composed of a Humidity Brick and a cable for the cascade configuration. It senses humidity. It is based on the SI7006-A20.
