

Light Sensor Materials Kit

CBI013

You've learned how to blink, fade and flash lights – now learn how to sense light levels!

The Chibitronics Light Sensor sticker can turn the light level shining upon it into an analog voltage. Best of all, it comes in a thin, flexible, paper-friendly sticker format.

The Light Sensor Add-on Materials Kit contains the consumable parts you'll need to master your light sensor and more:

- 3 light sensors
- 9 white LEDs
- 5 meters of copper tape
- 32 fabric tape patches

It's designed to be paired up with the Light Sensor Add-on #1 booklet (downloadable on-line with suggested printer settings for Adobe Acrobat if you prefer to print a copy yourself). You'll also need a Chibi Chip + Clip
