

GPIO Expander Keypad and LCD Demo Board User's Guide

Note the following details of the code protection feature on Microchip devices:

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as "unbreakable."

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.

Information contained in this publication regarding device applications and the like is provided only for your convenience and may be superseded by updates. It is your responsibility to ensure that your application meets with your specifications. MICROCHIP MAKES NO REPRESENTATIONS OR WARRANTIES OF ANY KIND WHETHER EXPRESS OR IMPLIED, WRITTEN OR ORAL, STATUTORY OR OTHERWISE, RELATED TO THE INFORMATION, INCLUDING BUT NOT LIMITED TO ITS CONDITION, QUALITY, PERFORMANCE, MERCHANTABILITY OR FITNESS FOR PURPOSE. Microchip disclaims all liability arising from this information and its use. Use of Microchip devices in life support and/or safety applications is entirely at the buyer's risk, and the buyer agrees to defend, indemnify and hold harmless Microchip from any and all damages, claims, suits, or expenses resulting from such use. No licenses are conveyed, implicitly or otherwise, under any Microchip intellectual property rights.

Trademarks

**QUALITY MANAGEMENT SYSTEM
CERTIFIED BY DNV
== ISO/TS 16949:2002 ==**

Microchip received ISO/TS-16949:2002 certification for its worldwide headquarters, design and wafer fabrication facilities in Chandler and Tempe, Arizona, Gresham, Oregon and Mountain View, California. The Company's quality system processes and procedures are for its PIC® 8-bit MCUs, KEELOQ® code hopping devices, Serial EEPROMs, microperipherals, nonvolatile memory and analog products. In addition, Microchip's quality system for the design and manufacture of development systems is ISO 9001:2000 certified.

GPIO EXPANDER KEYPAD AND LCD DEMO BOARD USER'S GUIDE

Preface

NOTICE TO CUSTOMERS

All documentation becomes dated, and this manual is no exception. Microchip tools and documentation are constantly evolving to meet customer needs, so some actual dialogs and/or tool descriptions may differ from those in this document. Please refer to our web site (www.microchip.com) to obtain the latest documentation available.

Documents are identified with a “DS” number. This number is located on the bottom of each page, in front of the page number. The numbering convention for the DS number is “DSXXXXA”, where “XXXX” is the document number and “A” is the revision level of the document.

INTRODUCTION

This chapter contains general information that will be useful to know before using the GPIO Expander Keypad and LCD Demo Board. Items discussed in this chapter include:

- Document Layout
- Conventions Used in this Guide
- Recommended Reading
- The Microchip Web Site
- Customer Support
- Document Revision History

DOCUMENT LAYOUT

This document describes how to use the GPIO Expander Keypad and LCD Demo Board as a development tool. The manual layout is as follows:

- **Chapter 1. “Product Overview”** – Important information about the GPIO Expander Keypad and LCD Demo Board.
- **Chapter 2. “Installation and Operation”** – Includes instructions on how to get started with this evaluation board.
- **Appendix A. “Schematics and Board Layouts”** – Shows the schematic and layout diagrams for the GPIO Expander Keypad and LCD Demo Board.
- **Appendix B. “Bill Of Materials (BOM)”** – Lists the parts used to build the GPIO Expander Keypad and LCD Demo Board.

CONVENTIONS USED IN THIS GUIDE

This manual uses the following documentation conventions:

DOCUMENTATION CONVENTIONS

Description	Represents	Examples
Arial font:		
Italic characters	Referenced books	<i>MPLAB[®] IDE User's Guide</i>
	Emphasized text	...is the <i>only</i> compiler...
Initial caps	A window	the Output window
	A dialog	the Settings dialog
	A menu selection	select Enable Programmer
Quotes	A field name in a window or dialog	"Save project before build"
Underlined, italic text with right angle bracket	A menu path	<u><i>File>Save</i></u>
Bold characters	A dialog button	Click OK
	A tab	Click the Power tab
N'Rnnnn	A number in verilog format, where N is the total number of digits, R is the radix and n is a digit.	4'b0010, 2'hF1
Text in angle brackets < >	A key on the keyboard	Press <Enter>, <F1>
Courier New font:		
Plain Courier New	Sample source code	#define START
	Filenames	autoexec.bat
	File paths	c:\mcc18\h
	Keywords	_asm, _endasm, static
	Command-line options	-Opa+, -Opa-
	Bit values	0, 1
	Constants	0xFF, 'A'
Italic Courier New	A variable argument	<i>file.o</i> , where <i>file</i> can be any valid filename
Square brackets []	Optional arguments	mcc18 [options] <i>file</i> [options]
Curly brackets and pipe character: { }	Choice of mutually exclusive arguments; an OR selection	errorlevel {0 1}

RECOMMENDED READING

For more information regarding the Stand-Alone CAN controller, CAN I/O Expander, and CAN transceiver devices, refer to the appropriate data sheet. Table 1 shows the device and associated Data Sheet literature number. These documents can be found at Microchip's web site at: www.microchip.com.

TABLE 1: DEVICES AND DATA SHEET LITERATURE NUMBERS

Device	Literature #	Device	Literature #
MCP23X08	DS21919	PIC18F4550	DS39632
MCP23X17	DS21952	MCP1702	DS22008

THE MICROCHIP WEB SITE

Microchip provides online support via our web site at www.microchip.com. This web site is used as a means to make files and information easily available to customers. Accessible by using your favorite Internet browser, the web site contains the following information:

- **Product Support** – Data sheets and errata, application notes and sample programs, design resources, user's guides and hardware support documents, latest software releases and archived software
- **General Technical Support** – Frequently Asked Questions (FAQs), technical support requests, online discussion groups, Microchip consultant program member listing
- **Business of Microchip** – Product selector and ordering guides, latest Microchip press releases, listing of seminars and events, listings of Microchip sales offices, distributors and factory representatives

CUSTOMER SUPPORT

Users of Microchip products can receive assistance through several channels:

- Distributor or Representative
- Local Sales Office
- Field Application Engineer (FAE)
- Technical Support
- Development Systems Information Line

Customers should contact their distributor, representative or field application engineer for support. Local sales offices are also available to help customers. A listing of sales offices and locations is included in the back of this document.

Technical support is available through the web site at: <http://support.microchip.com>

DOCUMENT REVISION HISTORY

Revision A (October 2006)

- Initial Release of this Document.

NOTES:

Chapter 1. Product Overview

1.1 INTRODUCTION

This chapter provides an overview of the GPIO Expander Keypad and LCD Demo Board and covers the following topics:

- What is the GPIO Expander Keypad and LCD Demo Board?
- What the GPIO Expander Keypad and LCD Demo Board Kit includes

1.2 WHAT IS THE GPIO EXPANDER KEYPAD AND LCD DEMO BOARD?

The GPIO Expander Keypad and LCD Demo Board allows the system designer to evaluate the operation of the MCP23X17 and MCP23X08 General Purpose I/O (GPIO) Expanders. The board demonstrates the GPIO Expanders' performance in a keypad and LCD example.

1.3 WHAT THE GPIO EXPANDER KEYPAD AND LCD DEMO BOARD KIT INCLUDES

This GPIO Expander Keypad and LCD Demo Board Kit includes:

- One GPIO Expander Keypad and LCD Demo Board (102-00116)
 - MCP23008 GPIO Expander with I²C™ interface (installed)
 - MCP23S08 GPIO Expander with SPI interface (installed)
 - MCP23017 GPIO Expander with I²C™ interface (installed)
 - MCP23S17 GPIO Expander with SPI interface (installed)
- Analog and Interface Products Demonstration Boards CD-ROM (DS21912)
 - GPIO Expander Keypad and LCD Demo Board User's Guide (DS51636)
 - PIC® Microcontroller Firmware
 - PCB Gerber Files

NOTES:

Chapter 2. Installation and Operation

2.1 INTRODUCTION

This chapter discusses the setup and operation of the GPIO Expander Keypad and LCD Demo Board.

The GPIO Expander Keypad and LCD Demo Board is designed to demonstrate using GPIO expanders in a keypad and LCD example. The MCP23X17 interfaces to a 2x16 LCD module and the MCP23X08 interfaces to a 4x4 keyed matrix.

Both the I²C™ and SPI versions are included on the board to demonstrate both serial interfaces.

2.2 FEATURES

The GPIO Expander Keypad and LCD Demo Board has the following features:

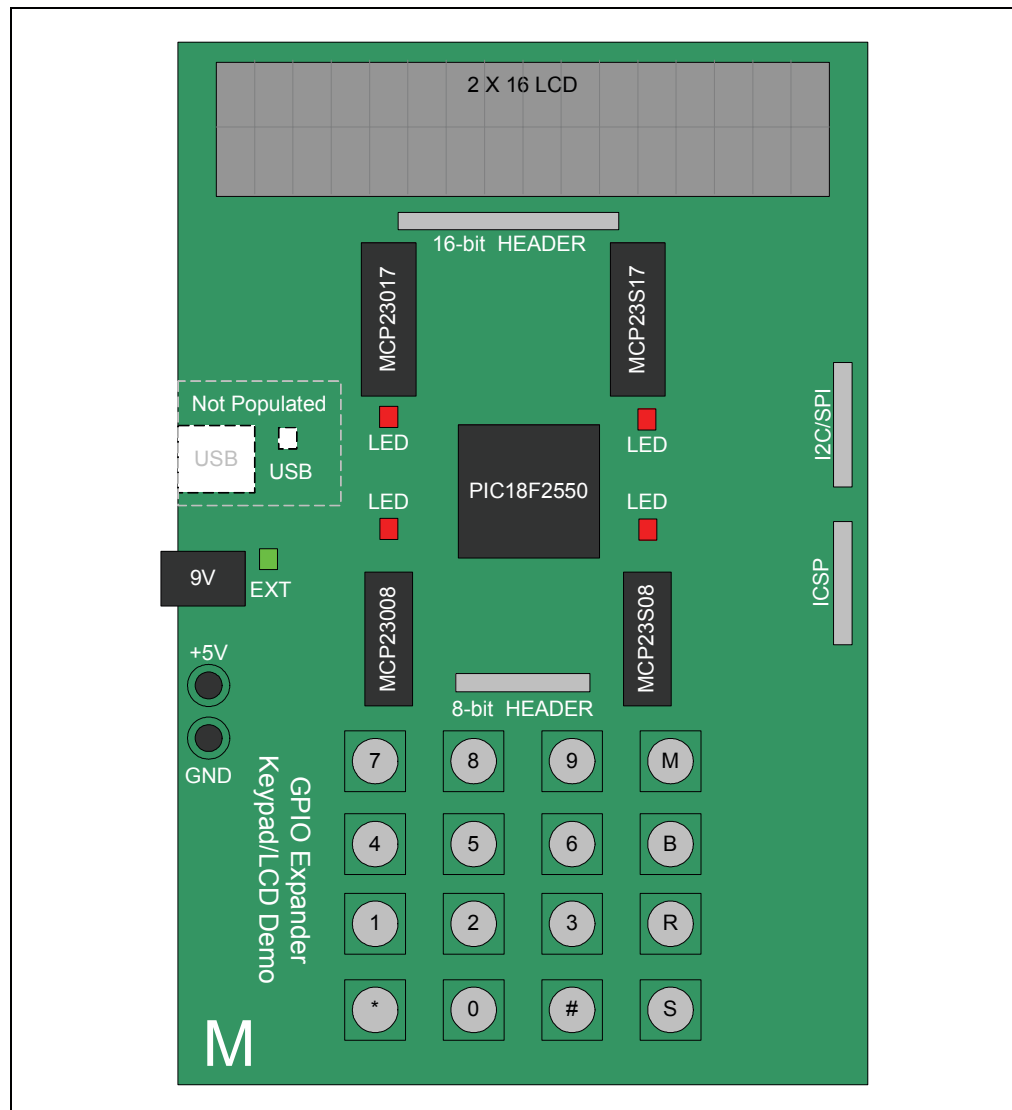

- Two (2) 8-bit GPIO Expanders
 - MCP23008 with I²C™ interface
 - MCP23S08 with SPI interface
- Two (2) 16-bit GPIO Expanders
 - MCP23017 with I²C™ interface
 - MCP23S17 with SPI interface
- 4X4 keypad layout (16 momentary buttons)
 - Numbers 0 - 9
 - Six special function buttons
- A 2X16 LCD module
- Headers for the MCP23X08 and MCP23X17 pins
- Header for programming the PIC18F4550

2.3 GETTING STARTED

The GPIO Expander Keypad and LCD Demo Board is a fully functional, assembled and tested board for demonstrating the MCP23008 and MCP23017 (I²C interface) and MCP23S08 and MCP23S17 (SPI interface) general purpose I/O expanders. The following describes the basic setup and operation (see [Figure 2-1](#)):

1. Either connect a 9V power supply into the power jack (J2) or connect a 5 V power supply to the V_{DD} and GND test points.
2. The green power LED will illuminate.
3. The LCD will display the startup splash screen.
4. The appropriate LEDs (I²C or SPI) will illuminate to indicate the current serial mode.
5. Pressing buttons:
 - **0 - 9, #, ***: will be reflected on the LCD
 - **M**: switches modes (I²C and SPI) to communicate with the MCP23X17 and MCP23X08; **B**: backspace; **R**: carriage return, and screen clear (2nd press); **S**: space

FIGURE 2-1: BOARD LAYOUT

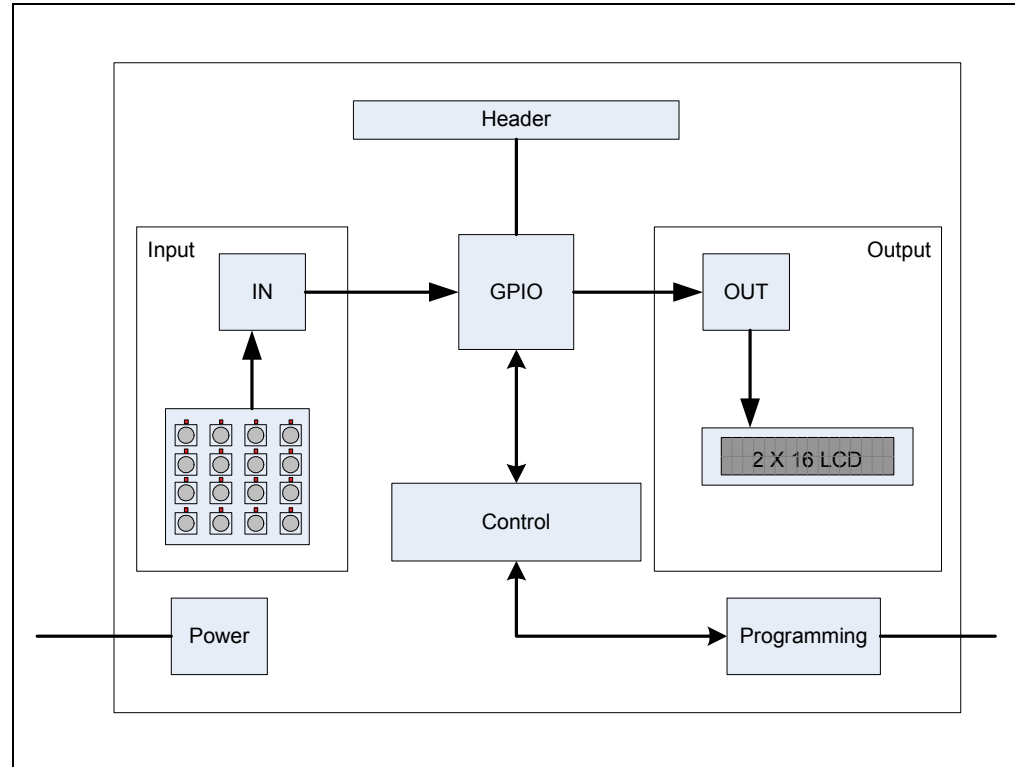

2.4 GPIO EXPANDER KEYPAD AND LCD DEMO BOARD DESCRIPTION

2.4.1 Major Board Components

The functional block diagram is shown in [Figure 2-2](#).

FIGURE 2-2: FUNCTIONAL BLOCK DIAGRAM

1. The **GPIO BLOCK** contains the MCP23X17 and MCP23X08 GPIO Expanders. Two (2) MCP23X17 devices are connected to the LCD module and two (2) MCP23X08 devices are connected to the keypad matrix. A button on the keypad toggles between I²C and SPI mode. When in **I²C mode**, the MCP23017 and MCP23008 are controlled by the PIC MCU. When in **SPI mode**, the MCP23S17 and MCP23S08 are controlled. Only one (1) MCP23X08 and one (1) MCP23X17 is on the bus at a time.
2. The **CONTROL BLOCK** contains the PIC18F4550 and is the main intelligence in the system.
3. The **INPUT BLOCK** contains the 4x4 keypad matrix. The MCP23X08 devices are used to scan the keys.
4. The **OUTPUT BLOCK** contains the 2x16 LCD. The MCP23X17 devices control the display.
5. The MCP23X17 and MCP23X08 I/O and serial lines are routed to the **HEADER BLOCK** to allow the pins to be probed.
6. The **PROGRAMMING BLOCK** contains the ICSP™ header for programming/debugging the PIC18F4550.
7. The **POWER BLOCK** contains the MCP1702 5V voltage regulator. The board can be powered by a 9V supply (connected through the power jack) or by applying 5V directly to the power points.

2.5 FIRMWARE DESCRIPTION

See [Figure 2-3](#) for the main firmware flow diagram.

Main Function:

1. The firmware first configures the PIC MCU.
2. The MCP23X08 and MCP23X17 devices are configured. I²C Devices are selected first by default. The SPI devices I/O are held in reset.
3. The LCD splash screen is shown.
4. Wait for an interrupt from the MCP23X08. An interrupt will occur when a button is pressed. Four (4) inputs are configured to interrupt on falling edge. These inputs are for the "columns" of the keypad matrix.
5. After the interrupt occurs, the firmware calls the **Scan_Buttons** routine.
6. Then the **Update_LCD** routine.

Scan_Buttons Function:

1. Read INTCAP register. This register contains a snapshot of the port condition when the interrupt occurred.
2. Swap inputs and outputs so the rows can be read.
3. Read GPIO register and merge with variable containing INTCAP value.
4. The pressed key is determined by looking up the result in a lookup table.

Update_LCD Function:

1. The LCD is updated based on which button was pressed.
