System Power Supply for TV Series

FET Controller Type 3ch System Power Supply ICs

BD8601FV

●Description

BD8601FV has realized the high performance and reliability required as a power supply for thin-screen TV.
Due to the high-speed load response, it is most suitable for TV-purpose processors with increasingly high performance, and due to the wide phase margin it leaves a good margin for board pattern & constant setting and so facilitates its application design.
As a high-reliability design, it has various built-in protection circuits (overcurrent protection, output voltage abnormal protection, thermal protection, and off-latch function at the time of abnormality etc.), therefore as an advantage it does not easily damage in every possible abnormal condition such as all-pin short circuit test etc. and hence most suitable for thin-screen TV which requires the high reliability.

●Features

1) 3ch synchronous rectification step-down system DC/DC converter controller
2) 3ch independent ON/OFF. controllable
3) Soft start, soft off function
4) Concentrated protection control with built-in sequencer
5) Built-in low voltage protection function
6) Built-in overvoltage protection function
7) Built-in overcurrent protection function
8) Built-in RT terminal open/short protection function
9) Built-in duty clamp (90% ON) function
10) Frequency setting by external resistance is available.
11) Protection condition is output from PDET terminal.
12) Built-in external reset output function

Aug. 2008

● **Electric characteristic**

(Ta=25℃, VIN1, VIN2, VIN3=5.0V, VCC=5.0V, and GND=0V unless otherwise specified.)

Parameter	Symbol	specification value			UNIT	Condition
		MIN	TYP	MAX		
Circuit current 1	I_{Q1}	-	3.5	8	mA	CTL1,2,3=0V

● Operation description

ON/OFF control

DC/DC converter controller ON/OFF function

DC/DC converter controller of each Ch can be independently controlled ON/OFF by CTL1, CTL2, and CTL3 terminal.
Analog circuit of Ch interlocked to each CTL terminal starts operation at ON control (on mode), and goes down to setting output voltage.
Analog circuit of Ch interlocked to each CTL terminal should be standby at OFF control (off mode), and output voltage becomes 0V.

Table1 DC/DC converter controller ON/OFF function

CTL1 terminal voltage	Ch1	CTL2 terminal voltage	Ch2	CTL3 terminal voltage	Ch3
>VIHCTL1	ON control	>VIHCTL2	ON control	>VIHCTL3	ON control
<VILCTL1	OFF control	<VILCTL2	OFF control	<VILCTL3	OFF control

Soft start time set function

DC/DC converter controller of each Ch can do soft start without overshoot by charging soft start capacity (Css) connected between ss terminal and GND in each Ch by charging current at ON control.
The mute of the output is released when it reaches V_{SS}=0.15V (V_{SSSTB}), and the output voltage does the soft start operation from the point of V_{SS}=0.3V (typ) in proportion to the voltage of the terminal SS.
Also, soft start time (tss) can be set by setting soft start capacity arbitrarily.
Soft start time (tss) should be set at 3msec < tss < 30msec.

$$t_{SS} = \frac{V_{SSTH} \times C_{SS}}{I_{SS}}$$

Discharge function

DC/DC converter controller of each Ch can do soft off by discharging load discharged to soft start capacity connected between SS terminal to GND by discharging resistance at OFF control.
Soft off operates in proportion to the voltage of the terminal SS the output voltage from the point of VSS=0.8V (typ).

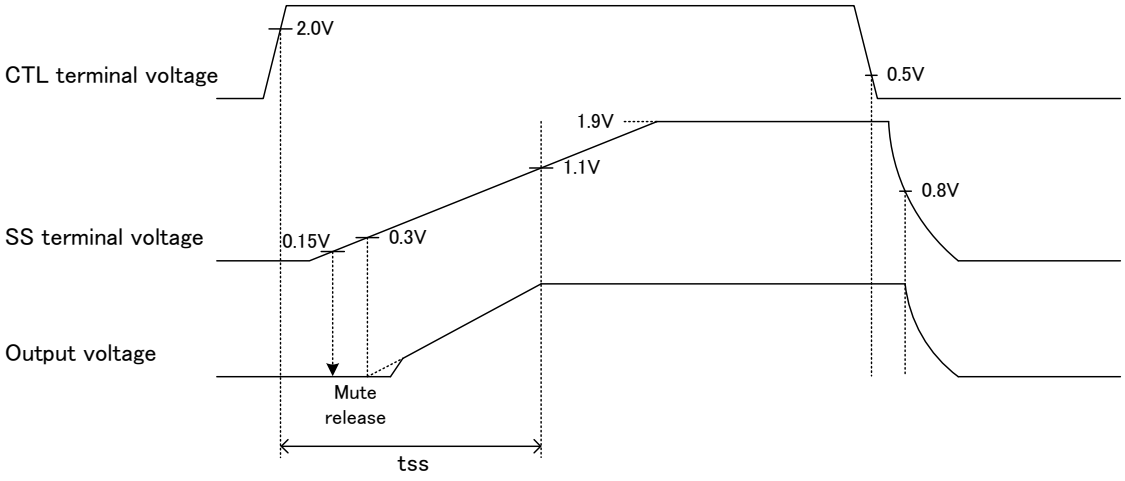

Figure 2 Wave form at ON/OFF control

OSC oscillation frequency setting function

DRVA and DRVB output oscillation frequency of DC/DC converter controller of each Ch can be set by installing resistance between RT terminal and GND externally.

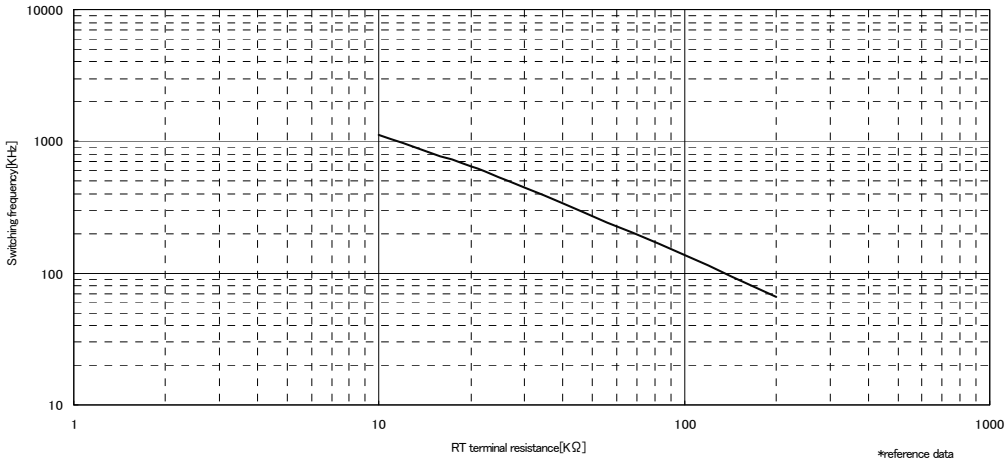

Figure 3 Terminal RT resistance-oscillation frequency

Off latch signal output function

PDET terminal outputs condition of off latch when protection operation of DC/DC converter controller of each Ch operates.

Table 2 PDET terminal　off latch signal output function

Protection operation	Terminal PDET
ON	LOW
OFF	Hi-Z

Reset output function

Reset output function observes voltage value from MONVCC terminal and does reset operation compared to internal reference level.

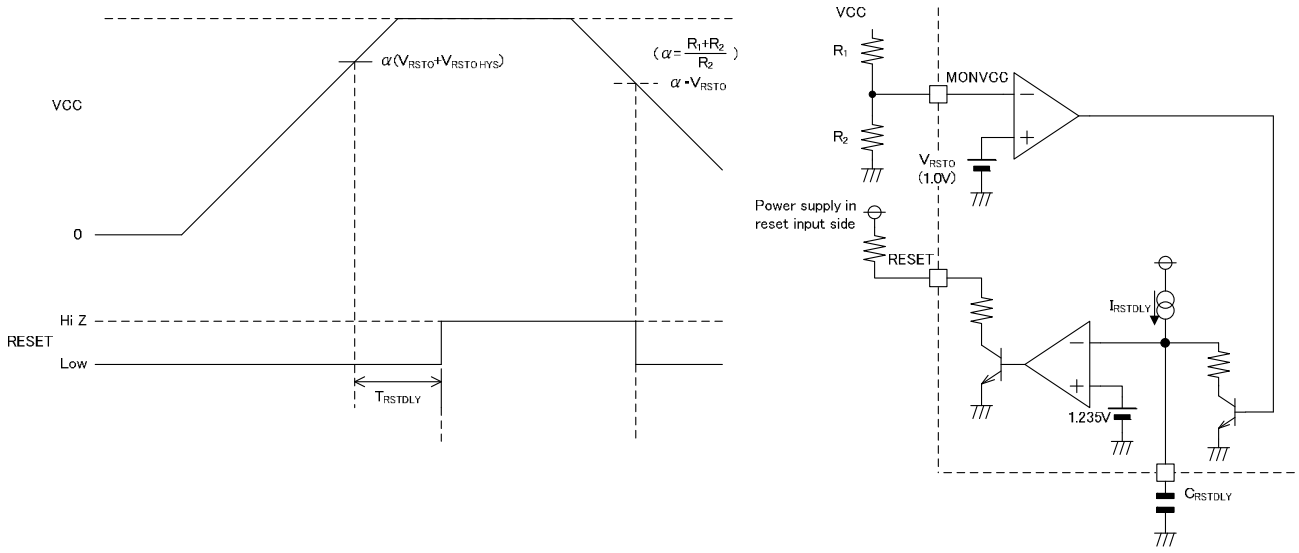
Set MONVCC terminal external resistance to make VCC voltage more than 5.0V at reset release.

Table 3 DC/DC converter controller ON/OFF function

MONVCC terminal voltage	RESET terminal
＜1.0V(typ)	LOW
＞1.072V(typ)	Hi-Z

Delay time until detecting reset release is settable by capacitor connected to RSTDLY terminal.

$$T_{RSTDLY} = \frac{1.235V \times C_{RSTDLY}}{I_{RSTDLY}}$$



TRSTDLY : Delay time until detecting reset release

Figure 4　reset operation

● Protection function

Protection circuit is effective for destruction prevention due to accident so that avoid using by continuous protection operation.

Low voltage protection function(LVP)

Low voltage protection function detects output voltage V_O set in each Ch from FB terminal of each Ch and off-latched all DC/DC converter controller compared to internal reference level.

Low voltage protection function operates when FB terminal voltage falls below V_{LVP} (=1.5 × VREF) and continues about more than 400μsec (typ).

Table 4 Low voltage protection function

CTL terminal	SS terminal	FB terminal	Low voltage protection function	Low voltage protection operation
>V_{IHCTL}	>1.1V(typ)	<V_{LVP}	Enable	ON
		>V_{LVP}+V_{LVP_HYS}		OFF
	<1.0V(typ)	-	Disable	OFF
<V_{ILCTL}	-	-	Disable	OFF

※Constant voltage protection function is enabled when SS terminal voltage of each Ch becomes more than 1.1V (typ) in the transition to ON control (during soft start).

Overvoltage protection function(OVP)

Overvoltage protection function detects output voltage VO set in each Ch from FB terminal of each Ch and off-latched all DC/DC converter controller compared to internal reference level.

Overvoltage protection function operates when FB terminal voltage exceeds VOVP (=1.5 × VREF) and continues about more than 400μsec (typ).

Table 5 Overvoltage protection function

CTL terminal	SS terminal	FB terminal	Overvoltage protection function	Overvoltage protection operation
>V_{IHCTL}	>1.1V(typ)	>V_{OVP}	Effective	ON
		<V_{OVP}		OFF
	<1.0V(typ)	-	Invalidity	OFF
<V_{ILCTL}	-	-	Invalidity	OFF

※Overvoltage protection function is enabled when SS terminal voltage of each Ch becomes more than 1.1V (typ) in the transition to ON control (during soft start).

Overcurrent protection function(OCP)

Overcurrent protection function compared drain voltage (LX terminal voltage) with OCP terminal voltage when external Pch POWER MOS is ON. When LX terminal voltage becomes lower than OCP terminal voltage, external MOS would be OFF. Up to 50uA (typ) of constant current from OCP terminal is synchronized. Overcurrent detection level (OCP terminal voltage) can be set arbitrarily by external resistance value.

Off latch by overcurrent protection function operates when LX terminal voltage falls below OCP terminal voltage and continues about more than 400μsec (typ).

Table 6 overcurrent protection function

CTL terminal	SS terminal	LX terminal voltage	Overcurrent protection function	Overcurrent protection operation
>V_{IHCTL}	>1.1V(typ)	<V_{OCP}	Enable	ON
		>V_{OCP}		OFF
	<1.0V(typ)	-	Disable	OFF
<V_{ILCTL}	-	-	Disable	OFF

※Set OCP terminal voltage to be more than VIN-2.5V (typ).

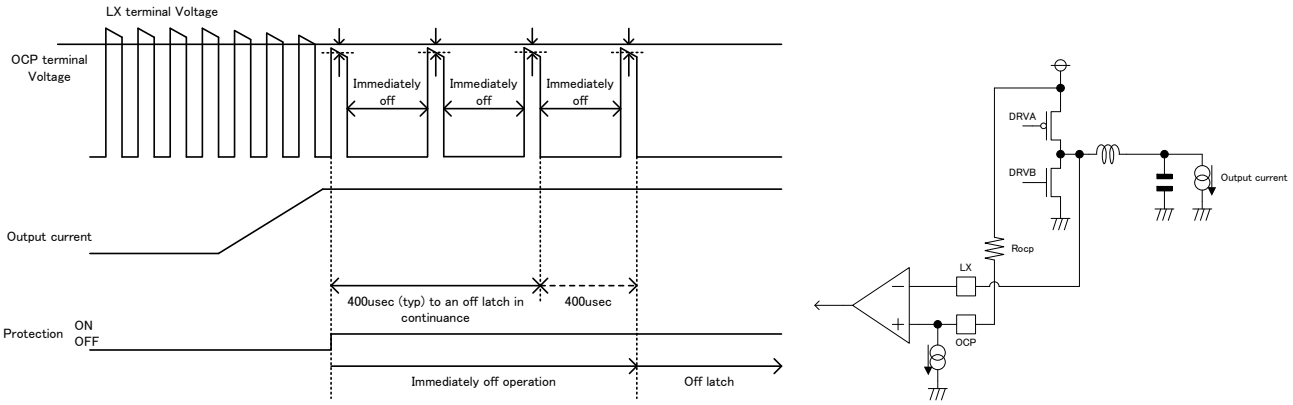


Figure 5-2. Overcurrent protection

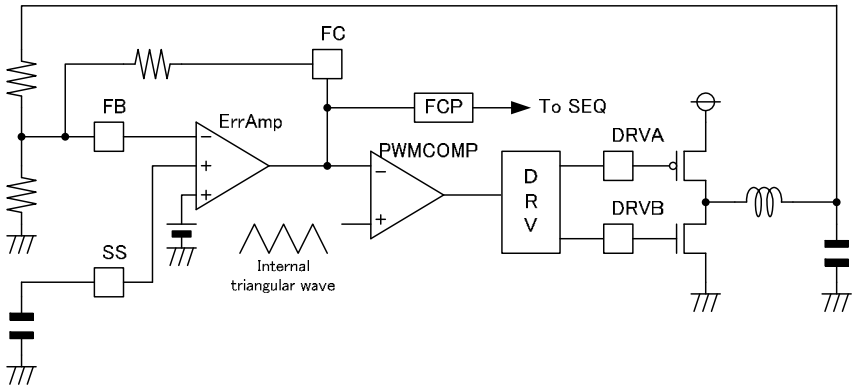
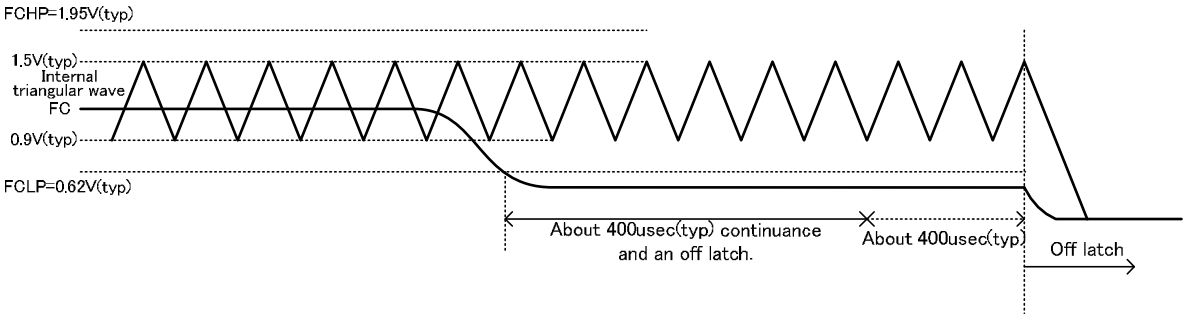
Terminal FC abnormality protection function





The terminal FC abnormality protection function Ofrattis it all DC/DC converter controller detecting the continuance of the state that FC which is the difference input of PWMCOMP does not intersect with an internal triangular wave.
The terminal FC abnormality protection function is exceeded 1.95V(typ) by the voltage of the terminal FC or operates when it falls below 0.62V(typ), and about 400usec(typ) or more continues.

CTL terminal	SS terminal	Protection operation	FC terminal	Terminal FC abnormality protection operation
> V_{IHCTL}	> 1.1V(typ)	Enable	> 1.95V(typ)	ON
			0.62V(typ) < , < 1.95V(typ)	OFF
	< 1.0V(typ)	Disable	< 0.62V(typ)	ON
< V_{IHCTL}			-	OFF

※Terminal FC abnormality protection function is enabled when SS terminal voltage of each Ch becomes more than 1.1V (typ) in the transition to ON control (during soft start).

RT terminal open/short protection function

RT terminal open/shot protection function off-latches all DC/DC converter controller by detecting open/short condition internally from RT terminal to prevent from output voltage error caused by abnormal oscillation of internal triangular wave at RT terminal open/short.

RT terminal open/short protection function is regularly enabled after boot-up.
RT terminal open/short protection function operates when error detection condition continues about more than 400µsec (typ).

Soft start time-out function

Each Ch DC/DC converter controller off-latch-controls when V_{SS} does not exceed V_{SSPON} from $V_{SS} > V_{SSSTB}+V_{SSSTB\_HYS}$ after 50msec (typ) passed from soft start.

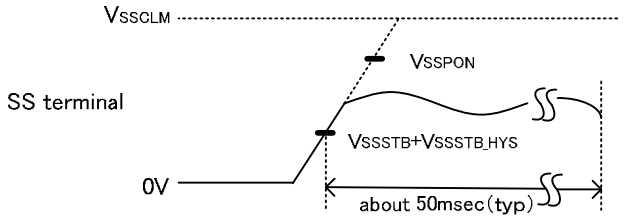


Figure 5-3. At soft start time-out

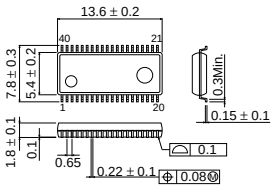
Error detection (off latch) release method

Each Ch DC/DC converter controller comes into off latch condition when protection function operates. Off latch can be released by the following method. Each Ch DC/DC converter controller becomes able to do ON control transition by releasing off latch.

1. Set all Ch CTL terminal voltage as $< V_{ILCTL}$ and continue that condition about more than 200usec (typ).
2. Drop down power supply VCC to below 4.5V.

SSOP-B40

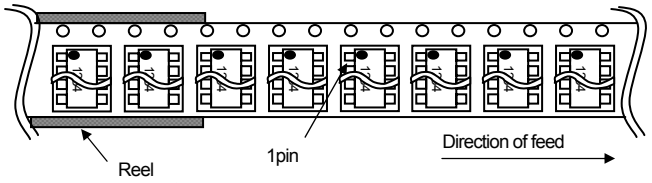
<Dimension>



(Unit:mm)

<Tape and Reel information>

Tape	Embossed carrier tape
Quantity	2000pcs
Direction of feed	E2 (The direction is the 1pin of product is at the upper left when you hold reel on the left hand and you pull out the tape on the right hand)



※When you order , please order in times the amount of package quantity.

- The contents described herein are subject to change without notice. The specifications for the product described in this document are for reference only. Upon actual use, therefore, please request that specifications to be separately delivered.
- Application circuit diagrams and circuit constants contained herein are shown as examples of standard use and operation. Please pay careful attention to the peripheral conditions when designing circuits and deciding upon circuit constants in the set.
- Any data, including, but not limited to application circuit diagrams information, described herein are intended only as illustrations of such devices and not as the specifications for such devices. ROHM CO.,LTD. disclaims any warranty that any use of such devices shall be free from infringement of any third party's intellectual property rights or other proprietary rights, and further, assumes no liability of whatsoever nature in the event of any such infringement, or arising from or connected with or related to the use of such devices.
- Upon the sale of any such devices, other than for buyer's right to use such devices itself, resell or otherwise dispose of the same, no express or implied right or license to practice or commercially exploit any intellectual property rights or other proprietary rights owned or controlled by
- ROHM CO., LTD. is granted to any such buyer.
- Products listed in this document are no antiradiation design.

The products listed in this document are designed to be used with ordinary electronic equipment or devices (such as audio visual equipment, office-automation equipment, communications devices, electrical appliances and electronic toys).
Should you intend to use these products with equipment or devices which require an extremely high level of reliability and the malfunction of which would directly endanger human life (such as medical instruments, transportation equipment, aerospace machinery, nuclear-reactor controllers, fuel controllers and other safety devices), please be sure to consult with our sales representative in advance.
It is our top priority to supply products with the utmost quality and reliability. However, there is always a chance of failure due to unexpected factors. Therefore, please take into account the derating characteristics and allow for sufficient safety features, such as extra margin, anti-flammability, and fail-safe measures when designing in order to prevent possible accidents that may result in bodily harm or fire caused by component failure. ROHM cannot be held responsible for any damages arising from the use of the products under conditions out of the range of the specifications or due to non-compliance with the NOTES specified in this catalog.

Thank you for your accessing to ROHM product informations.
