

Digital Multimeter Technical Specifications

Standard conditions: The environment temperature is 18°C to 28°C, the relative humidity is less than 80%.

Note: "T" in the model indicates true RMS (optional).

[3] When measuring frequency, the typical waveform is Square or Sine. The signal meets the following conditions.

Frequency	Amplitude (rms)
1 Hz – 4 MHz	≥ 300 mV
4 MHz – 8 MHz	≥ 600 mV
8 MHz – 10 MHz	≥ 750 mV

[4] When measuring duty cycle, the typical waveform is Square.

[1] When measuring current, for 10 A to 15 A, the measuring duration should not be over 2 minutes within 10 minutes, and in this 10 minutes, no other current should flow through except within the measuring duration; for 15 A to 20 A, the measuring duration should not be over 10 seconds within 15 minutes, and in this 15 minutes, no other current should flow through except within the measuring duration.

[2] Without relative operation, add ±0.50 Ω additional error in resistance function.

[3] When measuring capacitance, for the 220 mF range, the measuring duration should be over 25 seconds.

[4] When measuring frequency, the typical waveform is Square or Sine. The signal meets the following conditions.

Frequency	Amplitude (rms)
1 Hz – 4 MHz	≥ 300 mV
4 MHz – 8 MHz	≥ 600 mV
8 MHz – 10 MHz	≥ 750 mV

[5] When measuring duty cycle, the typical waveform is Square.
