

Greases

▶ Which one is the best for your customer?

Translucent Silicone Grease

- ▶ Use to lubricate plastic and rubber parts
- ▶ Use to provide a moisture barrier or seal
- ▶ Use where insulation is required

CAT. NO.
8462

White Lithium Grease

- ▶ Use to lubricate and protect high performance bearings, joints, gears and other mechanisms under sliding and rolling friction conditions
- ▶ Excellent on metal to metal applications: hardened steel, bronze, aluminum

CAT. NO.
8461

Carbon Conductive Grease

- ▶ Use to improve electrical connections between sliding surfaces
- ▶ Improves electrical connections between irregular or pitted surfaces
- ▶ Prevents hotspots, welding, arcing and pitting of switch contact surfaces
- ▶ Prevents normally closed switches from corroding in place
- ▶ Excellent for use in EMI shielding applications

CAT. NO.
846

Silicone Heat Transfer Compound 860 Non-Silicone Heat Transfer Compound 8610

- ▶ Use to transfer heat away from electrical and electronic devices such as transistors, power diodes, semi-conductors, ballasts and thermocouple wells
- ▶ Use with heat sinks or metal chassis

CAT. NO.
860

8610
