

# High Voltage Differential Probes

HVD3605A, HVD3220,  
HVD3206A, HVD310xA

## Key Features

- 1 kV, 2 kV, 6 kV CAT safety rated models
- Widest differential voltage ranges available
- Exceptional common-mode rejection ratio (CMRR) across a broad frequency range
- 1% gain accuracy
- High offset capability at both high and low attenuation
- AC and DC coupling
- ProBus active probe interface with automatic scaling
- AutoZero with auto disconnect switch
- Wide oscilloscope compatibility

The HVD3000A series high voltage differential probes provide high CMRR over a broad frequency range to simplify the measurement challenges found in noisy, high common-mode power electronics environments. The probe's design is easy-to-use and enables safe, precise high voltage floating measurements.

## Exceptional Common-Mode Rejection Ratio

The CMRR for the probes is exceptional out to very high frequencies, greatly improving measurement capability in the noisy, high common-mode environments found in power electronics. The high CMRR combined with low probe noise and high offset capability provides superior measurement capabilities compared to other HV differential probes.

## High Precision Measurements

HVD3000A series probes provide 1% gain accuracy enabling precise voltage measurements. AutoZero capability ensures further measurement precision by allowing small offset drifts to be calibrated out of the measurement. This feature can be applied without removing the HVD3000A leads from the device under test.

## Widest Application Coverage

The HVD3000A series cover the fullest range of applications, from 120/240 V switch-mode power supplies through 600 V class and 5 kV class electrical apparatus. Each model has the best available gain accuracy, widest differential and offset voltage range, and superior CMRR.

## 1500 Vdc CAT III Rating

The HVD3220 and HVD3206A support 1500 V<sub>DC</sub> solar photovoltaic (PV) measurements per the IEC/EN 61010-031:2015 standard. They have a 1500 V<sub>DC</sub> CAT III and a 2000 V (DC+peakAC) CAT I rating.

## Complete Probe Integration

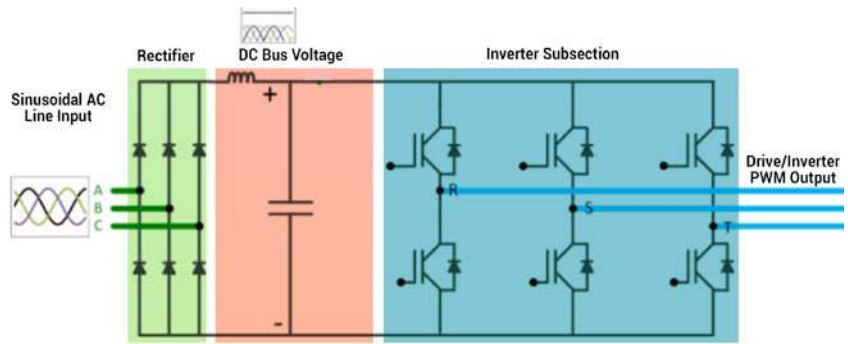

The ProBus interface provides power and communication to the probe eliminating the need for a separate power supply or batteries. Attenuation is automatically selected based on oscilloscope gain range (V/div) setting.

# WIDE APPLICATION COVERAGE - 600 V TO 5 KV APPARATUS

## 600 V Class, 3-phase Electrical Apparatus

The HVD310xA probes are available in a range of bandwidths from 25 to 120 MHz with standard 2 meter cable (6 meter cable model available). All probes have industry best CMRR for best noise-immunity, are guaranteed to 1% gain accuracy, and have the industry's widest differential voltage range in a 1 kV rated high voltage differential probe.

- Only 1 kV safety rated probe that serves the full 600 V class requirement
- 1500 V differential range with industry's best overshoot measurement capability (to 2000 V<sub>pk</sub>)
- Industry's best offset capability (1500 V) when used with HDO Series oscilloscopes
- Bandwidth rating up to 120 MHz
- 6 meter cable model available (HVD3106A-6M)
- Models available without accessories for a lower cost (HVD310xA-NOACC)

\*Based on 50% overshoot condition

## 5 kV Class, 3-phase Electrical Apparatus

The HVD3605A probe is safety-rated for 6000 V<sub>rms</sub> and 8485 V(DC + peak AC) for full coverage of 5 kV class apparatus. The probe has ample 100 MHz of bandwidth, is standard with a 6 meter cable, is guaranteed to 1% gain accuracy, has excellent CMRR, and has the industry's widest differential voltage range.

- Only probe that permits AC Line, DC Bus, and Drive/Inverter output voltage probing through 4160 V apparatus ratings
- Industry's best overshoot measurement capability (to 7600 V<sub>pk</sub>)
- Industry's best offset capability (6000 V) when used with HDO Series oscilloscopes
- Standard 6 meter cable

# WORLD'S ONLY 2 KV SAFETY RATED MODEL

## Solar PV Inverters

The HVD3220 and HVD3206A probes are rated to 1500 V<sub>DC</sub> (2000 V DC + peak AC). This makes the probes ideal for testing single-phase or three-phase inverters or newer 1500 V<sub>DC</sub> rated string-inverters (per IEC/EN 61010-031:2015). Both HVD3220 and HVD3206A have excellent gain accuracy (up to 0.35%), industry-leading CMRR, industry-best offset range, standard 2 meter cable, and a guaranteed 2000 V<sub>pk</sub> differential voltage range.

| Solar String DC Bus Voltage | Sinusoidal AC Output    |              |                                   |              |
|-----------------------------|-------------------------|--------------|-----------------------------------|--------------|
|                             | V <sub>pk</sub> (Rated) |              | V <sub>pk</sub> (with Overshoot)* |              |
|                             | Line-Line               | Line-Neutral | Line-Line                         | Line-Neutral |
| 1000                        | 849                     | 490          | 1104                              | 637          |
| 1500                        | 849                     | 490          | 1104                              | 637          |

\*Based on 30% overshoot condition

- Only 1500 V<sub>DC</sub> safety rated probe per IEC/EN 61010-031:2015
- Guaranteed 2000 V<sub>pk</sub> differential voltage range
- Industry's best offset capability (1500 V) when used with HDO Series oscilloscopes
- Bandwidth rating up to 400 MHz
- 6 meter cable model available (HVD3206A-6M)

## DC-DC Converters

High-power DC-DC converters can operate at substantial voltages, 500 V<sub>DC</sub> or higher. The HVD310xA models provide up to 1000 V<sub>DC</sub> common-mode (HVD3206A models provide up to 1500 V<sub>DC</sub>) and high precision (1% gain accuracy) DC voltage measurements. Automatic switchable attenuation keeps the probe in the optimum measurement range. Multiple probes can be used to understand complex device switching performance.

- Common mode range up to ±2000 V (DC + peak AC) with HVD3206A
- High precision - 1% accuracy
- Automatic gain switching for optimum performance

# SUPERIOR PERFORMANCE AT LOWER VOLTAGES

## 120 V / 240 V Half-Bridge Circuit Topologies

Single-phase switch-mode power supplies and other devices utilizing half-bridge topologies need test and validation at DC bus voltages up to 340 V<sub>DC</sub> with up to 680 V<sub>p-p</sub> on the input voltage. HVD310xA probes are cost-effective solutions for probing the wide range of high voltage signals present in these systems. “No Accessory (NOACC)” versions of these probes permit additional cost savings. Use your existing accessories or purchase just the ones you want.

- High precision - 1% accuracy
- Automatic gain switching for optimum performance

| Input Voltage (Vrms or Vac) | Input Voltage (Vpk-pk) | DC Bus Voltage (Vdc) | Output PWM Voltage (Vpk) |
|-----------------------------|------------------------|----------------------|--------------------------|
| 120                         | 340                    | 170                  | 170                      |
| 240                         | 680                    | 340                  | 340                      |

## MOSFET/IGBT Devices

### Upper-side Gate Drive Voltage Measurements

Typically from 3 to 20 volts and “floating” at up to the DC Bus voltage. HVD-A Series probes can provide very good results, but the HVFO High Voltage Fiber Optic probe is optimized for the best upper-side gate drive voltage measurements with 140 dB CMRR, reduced DUT loading, and better pulse response.

### Key Applications

- 48 V motors and drives
- High-power DC-DC converters
- GaN-based PDNs
- AC-DC switch-mode power supplies
- Wireless charging systems
- Gate-drive measurements

### Lower voltage GaN power conversion measurement

With 60 V of common mode, 80 V differential input range, and 1 GHz of bandwidth, DL-HCM probes provide the bandwidth and performance necessary for testing various low-power GaN systems.

60 V Common Mode Differential Probes

# UNDERSTANDING HV DIFFERENTIAL PROBE RATINGS

AC line voltages and power electronics systems can operate at very high voltages, and all parts of the measurement circuit are not necessarily connected to ground, requiring HV safety ratings. Additionally, a variety of terms may be used to describe the same voltage. Below is a simple tutorial to help you understand the various types of voltage terms and how they relate to each other. Understanding these voltage terms is necessary to ensure the correct probe selection.

## Single-phase AC Line Input

Ratings are provided in  $V_{RMS}$  (also referred to as  $V_{AC}$ ) referred Line-Neutral. AC Line inputs are usually grounded and these voltages can be assumed to have a 0V reference voltage.

$V_{peak}$  is calculated as  $\sqrt{2} * V_{RMS}$  and  $V_{pk-pk}$  is calculated as  $2 * V_{peak}$ . The example to the right is for a 120  $V_{RMS}$  rating.

## Three-phase AC Line Input

Ratings are provided in  $V_{RMS}$  (also referred to as  $V_{AC}$ ) referred Line-Line (L-L), which can be converted in magnitude to a Line-Neutral basis by dividing by  $\sqrt{3}$ .  $V_{peak}$  (L-L) is calculated  $\sqrt{2} * V_{RMS}$  and  $V_{pk-pk}$  is calculated as  $2 * V_{peak}$ . The example on the left is for a 480  $V_{RMS}$  three-phase rated system with signals shown as Line-Line.

## Rectified AC (DC Bus/Link Voltage)

For three-phase inputs, the three Line-Neutral (L-N) AC Line inputs are rectified and summed to provide a "stiff" DC (bus/link) voltage for the input to an inverter subsection. The example shown to the right is for a 600  $V_{RMS}$  system. The Line-Neutral RMS voltages are  $600V/\sqrt{3}$ , and each  $V_{peak}(L-N)$  is calculated as  $\sqrt{2} * V_{RMS}$ . The DC bus voltage after rectification and filtering is equal to  $\sqrt{3} * V_{peak}(L-N)$ , or 847  $V_{DC}$  in this case.

## Inverter or Drive H-Bridge or Cascaded H-Bridge Outputs

The nominal peak voltage (+ or -) of the PWM signals without accounting for signal overshoot is equal to the DC bus voltage. The measured 0V differential voltage value is not ground-referenced, and therefore a differential probe suitably rated to the DC bus voltage is recommended. Note that the  $+V_{peak}$  and  $-V_{peak}$  plus overshoot safety margin (typically ~50%) is what the HV differential probe must measure -  $V_{pk-pk}$  ( $2 * V_{peak}$ ) will never occur in the circuit.

| Cable Length (input lead to oscilloscope connection) | 2.25 m (6.8 m)  | 2.25 m   | 6.8 m   |

## Noise and Rejection

|                |  |  |  |
|----------------|--|--|--|
| CMRR (Typical) | DC - 60 Hz: 85 dB<br>1 MHz: 65 dB<br>5 MHz: 40 dB<br>20 MHz: 30 dB<br>100 MHz: 30 dB | DC - 60 Hz: 85 dB<br>1 MHz: 65 dB<br>5 MHz: 55 dB<br>20 MHz: 50 dB<br>100 MHz: 45 dB<br>300 MHz: 30 dB | DC - 60 Hz: 85 dB<br>10 kHz: 70 dB<br>1 MHz: 64 dB (200x)<br>1 MHz: 50 dB (2000x)<br>10 MHz: 40 dB (200x)<br>10 MHz: 30 dB (2000x)<br>100 MHz: 30 dB |
| Noise (Probe)  | 50X: <30 mVrms<br>500X: <150 mVrms<br>(referred to input)                            | 50X: 180 mVrms<br>100X: 180 mVrms<br>250X: 280 mVrms<br>500X: 300 mVrms<br>(referred to input)         | 200x: <65 mVrms<br>2000x: <320 mVrms<br>(typical, referred to input)   |

## Environmental

|                             |   |
|-----------------------------|---|
| Temperature (Operating)     | 0°C to 50°C   |
| Temperature (Non-Operating) | -40°C to 70°C   |
| Humidity (Operating)        | 5% to 80% RH (Non-Condensing) up to 30°C, decreasing linearly to 45% RH at 50°C |
| Humidity (Non-Operating)    | 5% to 95% RH (Non-Condensing), 75% RH above 30°C, 45% RH above 40°C             |
| Altitude (Operating)        | 3000 m maximum<br>When used with clip accessories, 2000 m maximum               |
| Altitude (Non-Operating)    | 10,000 m  |
| Pollution Degree            | 2, Indoor use only  |

## Certifications

\* CAT I per IEC/EN 61010-031/A1:2008. No Rated Measurement Category per IEC/EN 61010-031:2015.

# ORDERING INFORMATION

## Product Description

| Product Description  | Product Code   |
|--|----------------|
| 1 kV, 25 MHz High Voltage Differential Probe with 2 m cable  | HVD3102A       |
| 1 kV, 120 MHz High Voltage Differential Probe with 2 m cable   | HVD3106A       |
| 1 kV, 80 MHz High Voltage Differential Probe with 6 m cable  | HVD3106A-6M    |
| 1 kV, 25 MHz High Voltage Differential Probe with 2 m cable without tip Accessories  | HVD3102A-NOACC |
| 1 kV, 120 MHz High Voltage Differential Probe with 2 m cable without tip Accessories   | HVD3106A-NOACC |
| 2 kV, 120 MHz High Voltage Differential Probe with 2 m cable   | HVD3206A       |
| 2 kV, 80 MHz High Voltage Differential Probe with 6 m cable  | HVD3206A-6M    |
| 2 kV, 400 MHz High Voltage Differential Probe with 2 m cable   | HVD3220        |
| 6 kV, 100 MHz High Voltage Differential Probe with 6 m cable   | HVD3605A       |
| High Voltage Replacement Accessories Kit (Includes 2 each): High Bandwidth 4 mm Probe Tip Adapters, Safety Alligator Clips, Plunger Pincer Clips, Plunger Hook Clips, Plunger Alligator Clips, Spade Terminals | PK-HV-001      |

**HVD310xA-NOACC**

**HVD310xA / 310xA-6M**

**HVD3206A / 3206A-6M**

**HVD3220**

**HVD3605A**

## Customer Service

Teledyne LeCroy oscilloscopes and probes are designed, built, and tested to ensure high reliability. In the unlikely event you experience difficulties, our digital oscilloscopes are fully warranted for three years and our probes are warranted for one year. This warranty includes:

- No charge for return shipping
- Long-term 7-year support
- Upgrade to latest software at no charge

1-800-5-LeCroy  
teledyneleeroy.com

Local sales offices are located throughout the world.  
Visit our website to find the most convenient location.
