

Temperature Controller

KT SERIES

Temperature Controller

KT SERIES

RoHS compliance

Extensive line-up with models to match application and space

Upgraded KT4, KT8 and KT9 models Improved visibility, operability and performance! KT4R / KT8R / KT9R

Smooth initial setting and setting adjustment

Operation startup can begin after using initial setting mode to enter the control values required before first use, and after entering values for items such as frequently used and frequently changed settings. Smooth operation is enabled at initial startup and after changing settings.

Built-in easy programming function

Easy programmed control made possible using ninestep setting procedure. By entering specific target values for each indicated period, freely selectable temperature control is possible.

Example: From start of programmed control

- 1 Perform control so it becomes 200 °C 392 °F after 1 hour.
- ② Maintain 200 °C 392 °F until after 2 hours.
- ③ Perform control so it becomes 300 °C 572 °F after 30 minutes.

Step	1	2	3	4	5
sv (°C)	200 392	200 392	300 572	300 572	0 32
Time	1:00	2:00	0:30	1:00	2:00
Wait (°C °F)	10 50	0 32	10 50	0 32	0 32
300 °C 572 °F					
200 °C 392 °F			J		
0 °C 32 °F	Z				

Fine control of heat capacity

Sampling period rate half (1/2 times) from previous model: high speed 125 ms processing implemented. With twice the responsiveness, it is possible to more finely carry out control, for example, of the heat capacity.

Built-in rearing auto tuning function

The built-in rearing auto tuning function uses the step response method. From temperature rise behavior alone, it can calculate the PID constants. It is possible to calculate constants, even when auto tuning cannot be used to generate them. Because an ON/OFF operation is unnecessary, there is no disruption in control.

Other features

- Visibility and operability improved with large display and key size.
- Unit 60 mm 2.362 in approx. long: compact design saves space.
- With DC current output, can be used as simple signal converter.

Shared features of KT series

Multi-input sensors

Versatile thermocouple, RTD, DC voltage and DC current input for temperature detecting sensors.

Simple operation enables highly accurate temperature control

All required operations can be enabled by the front keys and highly accurate PID control mode ensures an input span of $\pm 0.2~\%$.

DIN Rail mounting types are aligned taking global market demand into consideration

The **KT7** series is equipped with DIN rail mounting complying to DIN standards. Furthermore, because its control panel is compact, the **KT7** series saves space.

Nine step pattern control possible

For **KT2** series, despite DIN 48 × 24 size, selection is possible of control with fixed set point and nine step pattern control.

Meets market demands for cost-effectiveness

The **KT** series offers both economy and high performance.

The KT series complies with UL / c-UL standard and CE marking

Improved visibility and ease of operation More compact than before KT4H / KT4B

The **KT4H** / **KT4B** series features improved visibility with a process value (PV) character height of 12 mm 0.472 in and an 11-segment display. Connectable to a PC, it offers a full range of control and communication functions

Communication specification uses RS-485 (Modbus protocol) Excluding KT8R / KT9R

Up to 31 units can be connected

Notes: 1) Only on type equipped with communications function.

- In the configuration above, the FPΣ requires a communication cassette (FPG-COM3).
- 3) Modbus protocol is a communication protocol developed for PLCs by Modicon Inc.

KT Monitor

Available for download free of charge from our website. Use it to collect data from the KT4H / KT4B temperature controller.

Please download the setting software (KT Monitor) from our website.

APPLICATIONS

Contributing to space saving, cost saving, and effort saving of various heater control systems.

ORDER GUIDE

KT2 series (Ash grev)

Base model	Power supply	Sensor input	Control output	Alarm output	Heating / cooling	Heater burnout	Communication function	n Description	
AKT2								48 × 24 × 98.5 mm 1.890 × 0.945 × 3.878 in	
	1							100-240 V AC	Must be
	2							24 V AC/DC	specified
'		1						Multi-input (Thermocouple, RTD, DC voltage and DC curre	nt)
	·		1					Relay contact output 1a 250 V AC 3 A	Marsh
			2					Non-contact voltage output (Voltage output for SSR drive)	Must be specified
			3					DC current output	
								When both heating / cooling and communication functions are not added Relay contact output (alarm 1) Can be used	
				2	0	0	Blank		
								Open collector output (alarm 2) Can be used	
								When only heating / cooling function is added	
				1	1	0	Blank	Relay contact output (alarm 1) Cannot be used	
								Open collector output (alarm 2) Can be used	
								When only communication function is added	
				1	0	0	1	Relay contact output (alarm 1) Can be used	
								Open collector output (alarm 2) Cannot be used	
								When both heating / cooling and communication functions are added	
				0	1	0	1	Relay contact output (alarm 1) Cannot be used	
								Open collector output (alarm 2) Cannot be used	

Notes: 1) When heating / cooling is selected, alarm output 1 cannot be used.

2) When the communication function is selected, alarm output 2 cannot be used.

Model No. search method

Example: Basic functions + optional functions (Heating / cooling: relay contact output + communication function)

• For KT2 series, the option function is only the following 4 patterns.

AKT2*1*200 Blank AKT2*1*1001 AKT2*1*110 Blank AKT2*1*0101 • Model No.: AKT21110101

Options Please refer to p.8.

Product name	Model No.
Shunt resistor (for current input)	AKT4810
Terminal cover	AKT2801

Note: When current input is specified, a shunt resistor (sold separately) is required.

KT4R series (Black)

Base model	Power supply	Sensor input	Control output	Alarm output	Heating / cooling	Heater burnout	Communication function	Model No.
				1		0 (Not available)	Blank (Not available)	AKT4R111100

Interface	EIA RS-485 compliant					
Number of nodes		31				
Maximum communication distance	1,000 m 3,2	80.840 ft (cable resistance must be	e within 50 Ω)			

EXTERNAL CONNECTION DIAGRAM

KT2 series

- TC: Input terminal for thermocouple
 RTD: Input terminal for the resistance temperature detector
- DC: Input terminal for DC current or DC voltage For DC current input, connect a separately sold reception resistor $(50 \ \Omega)$ between the input terminals
- OUT1: Output terminal for the control output or heating output (optional: heating / cooling control)
 • POWER SUPPLY: Power supply terminal
- EV1 / OUT2: Output terminal for alarm output 1 or cooling output (optional: heating / cooling control)
- EV2: Output terminal for alarm output 2
- DI: Input terminal for DI input (There are three types of DI input, SV1 / SV2 external switching function, OUT / OFF (RUN / STOP) external switching function, and timer function)
- RS-485: Communication terminal for serial communication.

KT4R series

- PWR: Power supply voltage 100-240 V AC or 24 V AC / DC (Ensure correct polarity when using DC in AC / DC 24 V.)
- EV1: Alarm output 1
- EV2: Alarm output 2 (optional)
- O1: Control output 1
- TC: Thermocouple input
- RTD: Resistance temperature detector input
- DC: DC voltage input or DC current input
- RS-485: Serial communication RS-485

KT8R / KT9R series

- PWR: Power supply voltage 100-240 V AC
- EV1: Alarm output 1
- EV2: Alarm output 2 (optional)
- O1: Control output 1
- TC: Thermocouple input
- RTD: Resistance temperature detector input
- DC: DC voltage input or DC current input

KT7 series

- POWER SUPPLY: Power supply
- OUT: Control output
- RELAY: Relay contact output
- V / A: DC voltage output / DC current output
- EVT: Alarm output [Outputs when alarm, loop fault alarm or heater burnout alarm (optional) goes ON.]
- TC: Thermocouple
- RTD: Resistance temperature detector
- DC: DC current or DC voltage
- RS-485: Serial communication
- CT: CT input

KT4H / KT4B series

- POWER SUPPLY: Power supply voltage
- EVT1: Alarm output 1
- EVT2: Alarm output 2 (optional) or heater burnout alarm output (optional)
- OUT1: Control output or heating output (optional)
- OUT2: Cooling output (optional)
- TC: Thermocouple input
- RTD: Resistance temperature detector input
- DC: DC current input (DCA) or DC voltage input (DCV) (For DC voltage input, + side connection terminal differs depending on the voltage. Also, for DC current input, connect shunt resistor between No. ⑩ and ⑫ terminals.)
- CT1: Current transformer input 1 (optional: for single phase and three phases)
- CT2: Current transformer input 2 (optional: for three phases)
- DI: Contact input (optional)
- RS-485: Serial communication RS-485 (optional)

COMMUNICATION FUNCTION CONNECTION DIAGRAM (PLC Connection Diagram)

KT2 / KT4R series

KT7 series

Notes: 1) Terminating resistors (Terminators)

The **KT** series has a built-in pull-up resistor or pull-down resistor, which serves as the terminating resistor. For this reason, do not connect the terminating resistor on the communication line.

Please use a RJ-11 6 polarized type modular connector.
 Please use a cable that is suitable for a modular connector. (Only KT7 series)

KT4H / KT4B series

Notes: 1) Shield wire

To prevent current flow along shield sections, ground one end of the shield wire.

(If both ends of the shield section are grounded, a closed circuit with the earth will form and electricity flowing through the shield wire will cause increased susceptibility to noise.)

2) Terminating Resistors (Terminators)

The **KT4H** / **KT4B** series has a built-in pull-up resistor or pull-down resistor. For this reason, do not connect the terminating resistor on the communication line.

PRECAUTIONS FOR PROPER USE

Mounting

KT2 series

Please install vertically in order to satisfy the IP66 specification for dust and splash proofing.

The possible control panel plate thickness for installation is between 1 to 10 mm 0.039 to 0.394 in.

- 1) Insert the unit from the front of the control panel.
- ② Insert the mounting frame until that the two edges make contact with the panel.
- ③ Tighten the screw and then turn it 3/4 of a turn after the edge of the screw reaches the panel.

KT4R series

Please install to a rigid, irregularity-free flat surface in order to satisfy the IP66 specification for dust and splash proofing. Panel thickness for installation: 1 to 5 mm 0.039 to 0.197 in

- 1) Insert the unit from the front of the control panel.
- ② Insert the mounting frame until that the edges make contact with the panel and tighten the screw. Fix by rotating screws one full turn after contact of screw tip and panel.

Apply tightening torque of 0.15 N·m.

PRECAUTIONS FOR PROPER USE

Mounting

KT8R / KT9R series

Please install to a rigid, irregularity-free flat surface in order to satisfy the IP66 specification for dust and splash proofing. Panel thickness for installation: 1 to 7 mm 0.039 to 0.276 in

- ① Insert the controller from the front of the control panel.
- ② Attach the screw type mounting brackets by the holes at the top and bottom of the case and secure the controller in place with the screws. Apply tightening torque of 0.1 N·m.

KT7 series

- · DIN rail mounting
- ② Making the A part of the KT7 series controller as a support, fit the lower part of the KT7 series controller to the DIN rail. KT7 series controller will be completely fixed to the DIN rail with a "click" sound.

Recommended DIN rail: Model No. **ATA48011**Recommended fastening plate: Model No. **ATA4806**

KT4H / KT4B series

Please install vertically in order to satisfy the IP66 specification for dust and splash proofing. The possible control panel plate thickness for installation is between 1 to 5 mm 0.039 to 0.197 in.

- 1) Insert the unit from the front of the control panel.
- ② Push the mounting frame fully into contact with the panel and tighten the screws. (Screw tightening torque: 0.05 N·m to 0.06 N·m)

PRECAUTIONS FOR PROPER USE

Part description

KT2 series

.Indicates the process value (PV) and setting value (SV). 1 PV/SV display (Red).....

During setting mode, characters and setting value of the setting item are indicated in turn. ② MEMO/STEP display (Green). .Indicates the memory number during fixed value control. Indicates step number during program control.

3 PV indicator (Red). Lights up when the input value is indicated.

 SV indicator (Green)
 AT indicator (Yellow) Lights up when main setting value is indicated.

.Flashes during auto-tuning (AT).
.Flashes during serial communication (Lit while sending data, Unlit while receiving data). ⑥ T/R indicator (Yellow). Lights up when control output or OUT1 (heating side) output (optional: heating / cooling control) is ON.

For DC current output type, it flashes corresponding to the manipulated variable in a 0.25 OUT indicator (Green).

second cycle.

1) PV display.....

Lights up when alarm output 1 or OUT2 (cooling side) output (optional: heating / cooling control) is ON. ® EV1 indicator (Red)...

9 EV2 indicator (Red)... Lights up when alarm output 2 is ON.

10 Increase key.

Increases the numeric value.

Decreases the numeric value. ① Decrease key

Selects the setting mode or registers the setting value.

By pressing the mode key, the setting value or selected value can be registered. The control output OUT / OFF or program control RUN / STOP can be switched. ③ OUT/OFF key

2 SV display. Indicates the setting value (SV). Increases the numeric value. ③ Increase key. Decrease key Decreases the numeric value. Selects the setting mode or registers the setting value. ⑤ Mode kev . 6 OUT/OFF key The control output ON / OFF, auto / manual control function or program control can be switched. (Not available in KT7 series) . Indicates the step number 7 STEP/MEMO display ... (program control) and set value memory number. (for KT8R and KT9R)

(PV).

Indicates the process value

8 Action indicators (Not available in KT7 series)

O1.....Lights up when control output 1 is ON.
 Lights up when heating control output (optional)

For DC power output type, it flashes corresponding to the manipulated variable in a

125 ms cycle •O2.....Lights up when cooling control output (optional) is ON.

•EV1....Lights when alarm output 1 is ON.

•EV2 ... Lights when alarm output 2 (optional) is ON.
•AT Flashes during auto-tuning or auto-reset.
•T/R Lights during serial communication (optional)

TX output. (for KT4R only)

KT4H / KT4B series

AKT7111100-0202YP

ு கூடியா ாயுக்கமாக (backlight: Orange)
°F °CLights respectively when temperature unit °F / °C is selected.
T/RLights during serial communication (optional) TX output.
ATFlashes during auto-tuning or auto-reset.
OUT1Lights when control output is ON or heating output (optional)
is ON.
For DC current output type, it flashes corresponding to the
manipulated variable in 0.25 second cycles.
OUT2Lights when cooling output (optional) is ON.
EVT1Lights when alarm output 1 is ON.
EVT2Lights when alarm output 2 (optional) is ON or heater burnout
alarm output (optional) is ON.
LOCKLights when lock 1, lock 2 or lock 3 is selected.
② MEMO displayIndicates the set value memory number. (backlight: Green)
③ PV displayIndicates the process value (PV). (backlight: Red / Orange /
Green)
SV displayIndicates the set value (SV). (backlight: Green)
Mode keySelects the setting mode and registers the set value.
6 OUT/OFF keyThe control output ON / OFF or auto / manual control
function can be switched.

- (7) Increase key Increases the numeric value
- ® Decrease keyDecreases the numeric value.
- (9) Tool connector....By connecting the dedicated cable, the following operations can be conducted from the external computer.

 • Reading and setting of SV, PID and various set values
 - Reading of PV and action status
 - · Function change

PRECAUTIONS FOR PROPER USE

Notes on site selection

This controller is intended to be used in the following environment. (IEC 61010-1)

- Overvoltage category II and Pollution degree 2 Mount the controller in a place with:
- · A minimum of dust, and an absence of corrosive gases.
- · No flammable, explosive gases.
- · Few mechanical vibrations or shocks.
- No exposure to direct sunlight, an ambient temperature of 0 to +50 °C 32 to +122 °F (For KT4R / KT8R / KT9R: -10 to +55 °C 14 to +131 °F) that does not change rapidly. (When installing inside a panel, make particular allowance for heat dissipation. Avoid installation in situations such as above equipment that generates heat.)
- Locations in which temperature rapidly changes may cause condensation.
- Locations or atmospheres in which benzine, thinners, alcohol, or other organic solvents are present, or in which ammonia, sodium hydroxide, or other strong alkaline substances may adhere.
- Locations susceptible to direct impact or the transmission of vibrations, or where splashing with water is possible.
- In the proximity of equipment in which large switching surges occur or near high-voltage cables, high-voltage equipment, power lines, power equipment, ham radio transmitters, or equipment containing these or similar devices.
- An ambient non-condensing humidity of 35 to 85 % RH.
- No large capacity electromagnetic switches or cables through which large current is flowing.
- No water, oil or chemicals or where the vapors of these substances can come into direct contact with the controller.

Notes on wiring

The terminal block of KT4R / KT8R / KT9R / KT4H / KT4B series are designed to be wired from the left side (The terminal of KT2 series are designed to be wired from the upper and lower direction). The lead wire must be inserted from the left side of the terminal, and fastened by the terminal screw. Use a wire-pressed terminal with insulation sleeve that fits to the M3 screw.

Wire-pressed terminal	Company name	Type name	Fastening torque
Code tuno	NICHIFU Co., Ltd.	1.25Y-3	
Fork type	J.S.T. Mfg. Co., Ltd.	VD1.25-B3A	0.6 N·m
Dayind time	NICHIFU Co., Ltd.	1.25-3	Max. 1.0 N·m.
Round type	J.S.T. Mfg. Co., Ltd.	V1.25-3	

- Terminal screw fastening torque is 0.6 N·m to 1.0 N·m (for KT4R / KT8R / KT9R / KT4H / KT4B series). For KT7 series by M3 screw is less than 0.5 N·m and by M2 screw is less than 0.25 N·m respectively.
- Use a thermocouple and compensating lead wire according to the sensor input specification of the controller.
- Use a 3-wire system of RTD according to the sensor input specification of the controller.

- This controller has no built-in power switch, circuit breaker and fuse. Therefore, it is necessary to install them in the circuit near the external controller. (Recommended fuse: Time-lag fuse, rating voltage 250 V AC, rating current 2 A)
- In the case of 24 V AC/DC power supply, do not confuse the polarity when it is DC.
- With the relay contact output type, use the relay externally according to the capacity of the load to protect the built-in relay contact.
- When wiring, keep input wire (Thermocouple, RTD, etc.) away from power source wire and load wire.
- Turn the power supply to the instrument off before wiring or checking. Working or touching the terminal with the power switched on may result in electric shock which could cause severe injury or death.
- Do not drop wire chips into the holes of vent when wiring.
- To prevent the controller from harmful effects of unexpected high level noise, it is recommended that a surge absorber be installed between the electromagnetic switch coils.

Notes on mounting

- Do not use excessive force while screwing in the mounting frame and mounting bracket of KT4R / KT8R / KT9R / KT4H / KT4B series. For KT8R / KT9R series, recommended torque is approximately 0.1 N·m. For KT4H / KT4B series, recommended torque is approximately 0.05 to 0.06 N·m. For KT4R series, recommended torque is approximately 0.15 N·m.
- When mounting the KT7 series to the DIN rail, mount it in a lateral direction. Make sure a click is audible when fixed into place.

Optional heater burnout alarm output (for KT7 / KT4H series)

- This alarm output is not available for detecting heater current under phase control.
- Use the current transformer (CT) provided, and pass one lead wire of the heater circuit into the hole of CT.
- When wiring, keep CT wire away from power source wire and load wire to avoid external interference.
- In three phase installations for **KT4H** series, ensure that R, S and T are each connected to a 2-line CT that connects with CT1 [[®] [®]] and CT2 [[®] [®]] terminals.

Please use rod terminals for the terminal portion of the KT7 series.

We recommend terminals made by Phoenix Contact. ① to ④ are Al0.25-8YE, Al0.34-8TQ, Al0.5-8WH, Al0.75-8GY, Al1.0-8RD, and Al1.5-8BK.

5 to 9 are Al0.25-8YE, Al0.34-8TQ, and Al0.5-8WH. The screw tightening torque for 1 to 4 should be less than 0.5 N·m and for 5 to 9 it should be less than 0.25 N·m. Make sure no screw is loose.
