### Description

The Harris CD74HC374, CD74HCT374, CD74HC574 and CD74HCT574 are Octal D-Type Flip-Flops with Three-State Outputs and the capability to drive 15 LSTTL loads. The eight edge-triggered flip-flops enter data into their registers on the LOW to HIGH transition of clock (CP). The Output Enable ( $\overline{OE}$ ) controls the three-state outputs and is independent of the register operation. When Output Enable ( $\overline{OE}$ ) is HIGH the outputs will be in the high impedance state. The 374 and 574 are identical in function and differ only in their pinout arrangements.
