CMOS

F²MC-16F MB90220 Series

MB90223/224/P224A/W224A MB90P224B/W224B/V220

■ OUTLINE

The MB90220 series of general-purpose high-performance 16-bit microcontrollers has been developed primarily for applications that demand high-speed real-time processing and is suited for industrial applications, office automation equipment, process control, and other applications. The F²MC-16F CPU is based on the F²MC*-16 Family with improved high-level language support functions and task switching functions, as well as additional addressing modes.

On-chip peripheral resources include a 4-channel PWC timer, a 4-channel ICU (Input Capture Unit), a 1-channel 24-bit timer counter, an 8-channel OCU (Output Compare Unit), a 6-channel 16-bit reload timer, a 2-channel 16-bit PPG timer, a 10-bit A/D converter with 16 inputs, and a 4-channel serial port with a UART function (one channel includes the CTS function).

The MB90P224B, MB90W224B, MB90224 is under development.

*: F²MC stands for FUJITSU Flexible Microcontroller.

■ PACKAGE

120-pin Plastic QFP

(FPT-120P-M03)

120-pin Ceramic QFP

(FPT-120C-C02)

MB90220 Series

■ FEATURES

F²MC-16F CPU

- Minimum execution time: 62.5 ns/16 MHz oscillation (using a duty control system)
- Instruction sets optimized for controllers
 - Upward object-compatible with the F²MC-16(H)
 - Various data types (bit, byte, word, and long-word)
 - Instruction cycle improved to speed up operation
 - Extended addressing modes: 25 types
 - High coding efficiency
 - Access method (bank access with linear pointer)
 - Enhanced multiplication and division instructions (with signed instructions added)
 - Higher-precision operation using a 32-bit accumulator
- Extended intelligent I/O service (automatic transfer function independent of instructions)
 - Access area expanded to 64 Kbytes
- Enhanced instruction set applicable to high-level language (C) and multitasking
 - System stack pointer
 - Enhanced pointer-indirect instructions
 - Barrel shift instruction
 - Stack check function
- Increased execution speed: 8-byte instruction queue
- Powerful interrupt functions: 8 levels and 28 sources

Peripheral resources

- Mask ROM : 64 Kbytes (MB90223)
96 Kbytes (MB90224)
- EPROM : 96 Kbytes (MB90W224A/W224B)
- One-time PROM : 96 Kbytes (MB90P224A/P224B)
- RAM: 3 Kbytes (MB90223)
4.5 Kbytes (MB90224/MB90W224A/P224A/W224B/P224B)
5 Kbytes (MB90V220)
- General-purpose ports: max. 102 channels
- ICU (Input Capture Unit): 4 channels
- 24-bit timer counter: 1 channel
- OCU (Output Compare Unit): 8 channels
- PWC timer with time measurement function: 4 channels
- 10-bit A/D converter: 16 channels
- UART: 4 channels (one channel includes CTS function)
- 16-bit reload timer
 - Toggled output, external clock, and gate functions: 6 channels
- 16-bit PPG timer: 2 channels
- DTP/External-interrupt inputs: 8 channels (of which five have edge detection function only)
- Write-inhibit RAM: 0.5 Kbytes (1 Kbyte for MB90V220)
- Timebase counter: 18 bits
- Clock gear function
- Low-power consumption mode
 - Sleep mode
 - Stop mode
 - Hardware standby mode

MB90220 Series

Product description

- MB90223/224 are mask ROM product.
- MB90P224A/P224B are one-time PROM products.
- MB90W224A/W224B are EPROM products. ES only.
- Operating temperature of MB90P224A/W224A is -40°C to $+85^{\circ}\text{C}$.
(However, the AC characteristics is assured in -40°C to $+70^{\circ}\text{C}$)
- Operation clock cycle of MB90223 is 10 MHz to 12 MHz.
- MB90V220 is a evaluation device for the program development. ES only.

■ PRODUCT LINEUP

Part number Item	MB90223	MB90224	MB90P224A MB90P224B	MB90W224A MB90W224B	MB90V220
Classification	Mask ROM product	Mask ROM product	One-time PROM product	EPROM product	Evaluation device
ROM size	64 Kbytes	96 Kbytes	96 Kbytes	96 Kbytes	None
RAM size	3 Kbytes	4.5 Kbytes	4.5 Kbytes	4.5 Kbytes	5 Kbytes
CPU functions	The number of instructions: 412 Instruction bit length: 8 or 16 bits Instruction length: 1 to 7 bytes Data bit length: 1, 4, 8, 16, or 32 bits Minimum execution time: 62.5 ns/16 MHz Interrupt processing time: 1.0 μs /16 MHz (min.)				
Ports	I/O ports (N-ch open-drain): 16 I/O ports (CMOS): 86 Total: 102				
ICU (Input Capture Unit)	Number of channels: 4 Rising edge/falling edge/both edges selectable				
24-bit timer counter	Number of channels: 1 Overflow interrupt, intermediate bit interrupt				
OCU (Output Compare Unit)	Number of channels: 8 Pin change source (match signal causes register value transfer/general-purpose port)				
PWC timer	Number of channels: 4 16-bit reload timer operation (operation clock cycle: 0.25 μs to 1.31 ms) 16-bit pulse-width count operation (Allowing continuous/one-shot measurement, H/L width measurement, inter-edge measurement, and divided-frequency measurement)				
10-bit A/D converter	Resolution: 10 bits Number of inputs: 16 Single conversion mode (conversion of each channel) Scan conversion mode (continuous conversion for up to 16 consecutive channels) Continuous conversion mode (repeated conversion of specified channel) Stop conversion mode (conversion every fixed cycle)				
UART	Number of channels: 4 (1 channel with CTS function) Clock-synchronous transfer mode (full-duplex double buffering, 7 to 9-bit data length, 2400 to 62500 bps) Asynchronous transfer mode (full-duplex double buffering, 7 to 9-bit data length, 2400 to 62500 bps)				
16-bit reload timer	Number of channels: 6 16-bit reload timer operation (operation clock cycle: 0.25 μs to 1.05 s)

Part number Item	MB90223	MB90224	MB90P224A MB90P224B	MB90W224A MB90W224B	MB90V220
16-bit PPG timer	Number of channels: 2 16-bit PPG operation (operation clock cycle: 0.25 μ s to 6 s)				
DTP/External interrupts	Number of inputs: 8 (of which five have edge detection function only) External interrupt mode (allowing interrupts to activate at four different request levels) Simple DMA transfer mode (allowing extended I ² O/S to activate at two different request levels)				
Write-inhibited RAM	RAM size: 512 bytes (1 Kbyte for MB90V220) RAM write-protectable with \overline{WI} pin				
Standby mode	stop mode (activated by software or hardware) and sleep mode				
Gear function	Machine clock operation frequency switching: 16 MHz, 8 MHz, 4 MHz, 1 MHz (at 16-MHz oscillation)				
Package	FPT-120P-M03		FPT-120C-C02	PGA-256C-A02	

Note: MB90V220 is a evaluation device, therefore, the electrical characteristics are not assured.

■ DIFFERENCES BETWEEN MB90223/224 (MASK ROM PRODUCT) AND MB90P224A/W224A/P224B/W224B

MB90220 Series

■ PIN DESCRIPTION

Pin no. QFP*	Pin name	Circuit type	Function
92, 93	X0, X1	A	Crystal oscillation pins (16 MHz)
89 to 87	MD0 to MD2	D	Operation mode specification input pins Connect directly to V _{CC} or V _{SS} .
90	$\overline{\text{RST}}$	G	External reset request input
86	$\overline{\text{HST}}$	E	Hardware standby input pin
95 to 102	P00 to P07	C	General-purpose I/O ports This function is valid only in single-chip mode.
	D00 to D07		Output pins for low-order 8 bits of the external address bus. This function is valid only in modes where the external bus is enabled.
103 to 110	P10 to P17	C	General-purpose I/O ports This function is valid only in single-chip mode or when the external bus is enabled and the 8-bit data bus specification has been made.
	D08 to D15		I/O pins for higher-order 8 bits of the external data bus This function is valid only when the external bus is enabled and the 16-bit bus specification has been made.
111 to 118	P20 to P27	C	General-purpose I/O ports This function is valid only in single-chip mode.
	A00 to A07		Output pins for lower-order 8 bits of the external address bus This function is valid only in modes where the external bus is enabled.
120, 1 to 7	P30, P31 to P37	C	General-purpose I/O ports This function is valid either in single-chip mode or when the address mid-order control register specification is "port".
	A08, A09 to A15		Output pins for mid-order 8 bits of the external address bus This function is valid in modes where the external bus is enabled and the address mid-order control register specification is "address".
9 to 11	P40 to P42	C	General-purpose I/O ports This function is valid either in single-chip mode or when the address high-order control register specification is "port".
	A16 to A18		Output pins for higher-order 8 bits of the external address bus This function is valid in modes where the external bus is enabled and the address high-order control register specification is "address".
12 to 16	P43 to P47	C	General-purpose I/O ports This function is valid when either single-chip mode is enabled or the address higher-order control register specification is "port".
	A19 to A23		Output pins for higher-order 8 bits of the external address bus This function is valid in modes where the external bus is enabled and the address higher-order control register specification is "address".
	TIN1 to TIN5		16-bit reload timer input pins This function is valid when the timer input specification is "enabled". The data on the pins is read as timer input (TIN1 to TIN5).

MB90220 Series

Pin no. QFP*	Pin name	Circuit type	Function
12 to 16	INT3 to INT7	C	External interrupt request input pins When external interrupts are enabled, these inputs may be used suddenly at any time; therefore, it is necessary to stop output by other functions on these pins, except when using them for output deliberately.
78	P50	C	General-purpose I/O port This function is valid in single-chip mode and when the CLK output specification is disabled.
	CLK		CLK output pin This function is valid in modes where the external bus is enabled and the CLK output specification is enabled.
79	P51	C	General-purpose I/O port This function is valid in single-chip mode or when the ready function is disabled.
	RDY		Ready input pin This function is valid in modes where the external bus is enabled and the ready function is enabled.
80	P52	C	General-purpose I/O port This function is valid in single-chip mode or when the hold function is disabled.
	$\overline{\text{HAK}}$		Hold acknowledge output pin This function is valid in modes where the external bus is enabled and the hold function is enabled.
81	P53	C	General-purpose I/O port This function is valid in single-chip mode or external bus mode and when the hold function is disabled.
	HRQ		Hold request input pin This function is valid in modes where the external bus is enabled and the hold function is enabled. During this operation, the input may be used suddenly at any time; therefore, it is necessary to stop output by other functions on this pin, except when using it for output deliberately.
82	P54	C	General-purpose I/O port This function is valid in single-chip mode, when the external bus is in 8-bit mode, or when $\overline{\text{WRH}}$ pin output is disabled.
	$\overline{\text{WRH}}$		Write strobe output pin for the high-order 8 bits of the data bus This function is valid in modes where the external bus is enabled, the external bus is in 16-bit mode, and $\overline{\text{WRH}}$ pin output is enabled.
83	P55	C	General-purpose I/O port This function is valid in single-chip mode or when $\overline{\text{WRL}}$ pin output is disabled.
	$\overline{\text{WRL}}$		Write strobe output pin for the low-order 8 bits of the data bus This function is valid in modes where the external bus is enabled and $\overline{\text{WRL}}$ pin output is enabled.

MB90220 Series

Pin no. QFP*	Pin name	Circuit type	Function
84	P56	C	General-purpose I/O port This function is valid in single-chip mode. This function is valid in modes where the external bus is valid.
	\overline{RD}		Read strobe output pin for the data bus This function is valid in modes where the external bus is enabled.
85	P57	B	General-purpose I/O port This function is always valid. When these pins are open in input mode, through current may leak in stop mode/reset mode, be sure to fix these pins to V_{CC}/V_{SS} level to use these pins in input mode.
	\overline{WI}		RAM write disable request input During this operation, the input may be used suddenly at any time; therefore, it is necessary to stop output by other functions on this pin, except when using it for output deliberately.
46 to 53	P60 to P67	F	Open-drain I/O ports This function is valid when the analog input enable register specification is "port".
	AN00 to AN07		10-bit A/D converter analog input pins This function is valid when the analog input enable register specification is "analog input".
17 to 24	P70 to P77	C	General-purpose I/O ports This function is valid when the output specification for DOT0 to DOT7 is "disabled".
	DOT0 to DOT7		This function is valid when OCU (output compare unit) output is enabled.
25 to 30	P80 to P85	C	General-purpose I/O ports This function is valid when the output specification for TOT0 to TOT5 is "disabled".
	TOT0 to TOT5		16-bit reload timer output pins (TOT0 to TOT5)
31, 32	P86, P87	C	General-purpose I/O ports This function is valid when the PPG0, and PPG1 output specification is "disabled".
	PPG0, PPG1		16-bit PPG timer output pins This function is valid when the PPG control/status register specification is "PPG output pins".
34 to 41	P90 to P97	F	Open-drain I/O ports This function is valid when the analog input enable register specification is "port".
	AN08 to AN15		10-bit A/D converter analog input pins This function is valid when the analog input enable register specification is "analog input".

MB90220 Series

■ HANDLING DEVICES

1. Preventing Latchup

CMOS ICs may cause latchup when a voltage higher than V_{CC} or lower than V_{SS} is applied to input or output pins other than medium-and high-voltage pins, or when a voltage exceeding the rating is applied between V_{CC} and V_{SS} .

If latch-up occurs, the power supply current increases rapidly, sometimes resulting in thermal breakdown of the device. Use meticulous care not to let any voltage exceed the maximum rating.

Also, take care to prevent the analog power supply (AV_{CC} and AV_{RH}) and analog input from exceeding the digital power supply (V_{CC}) when the analog system power supply is turned on and off.

2. Treatment of Unused Input Pins

Leaving unused input pins open could cause malfunctions. They should be connected to a pull-up or pull-down resistor.

3. Treatment of Pins when A/D is not Used

Connect to be $AV_{CC} = AV_{RH} = V_{CC}$ and $AV_{SS} = AV_{RL} = V_{SS}$ even if the A/D converter is not in use.

4. Precautions when Using an External Input

To reset the internal circuit properly by the “L” level input to the \overline{RST} pin, the “L” level input to the \overline{RST} pin must be maintained for at least five machine cycles. Pay attention to it if the chip uses external clock input.

5. V_{CC} and V_{SS} Pins

Apply equal potential to the V_{CC} and V_{SS} pins.

6. Supply Voltage Variation

The operation assurance range for the V_{CC} supply voltage is as given in the ratings. However, sudden changes in the supply voltage can cause misoperation, even if the voltage remains within the rated range. Therefore, it is important to supply a stable voltage to the IC. The recommended power supply control guidelines are that the commercial frequency (50 to 60 Hz) ripple variation (P-P value) on V_{CC} should be less than 10% of the standard V_{CC} value and that the transient rate of change during sudden changes, such as during power supply switching, should be less than 0.1 V/ms.

7. Notes on Using an External Clock

When using an external clock, drive the X0 pin as illustrated below. When an external clock is used, oscillation stabilization time is required even for power-on reset and wake-up from stop mode.

• Use of External Clock

Note: When using an external clock, be sure to input external clock more than 6 machine cycles after setting the \overline{HST} pin to “L” to transfer to the hardware standby mode.

8. Power-on Sequence for A/D Converter Power Supplies and Analog Inputs

Be sure to turn on the digital power supply (V_{CC}) before applying voltage to the A/D converter power supplies (AV_{CC} , $AVRH$, and $AVRL$) and analog inputs (AN00 to AN15).

When turning power supplies off, turn off the A/D converter power supplies (AV_{CC} , $AVRH$, and $AVRL$) and analog inputs (AN00 to AN15) first, then the digital power supply (V_{CC}).

When turning $AVRH$ on or off, be careful not to let it exceed AV_{CC} .

MB90220 Series

■ PROGRAMMING FOR MB90P224A/P224B/W224A/W224B

In EPROM mode, the MB90P224A/P224B/W224A/W224B functions equivalent to the MBM27C1000. This allows the EPROM to be programmed with a general-purpose EPROM programmer by using the dedicated socket adapter (do not use the electronic signature mode).

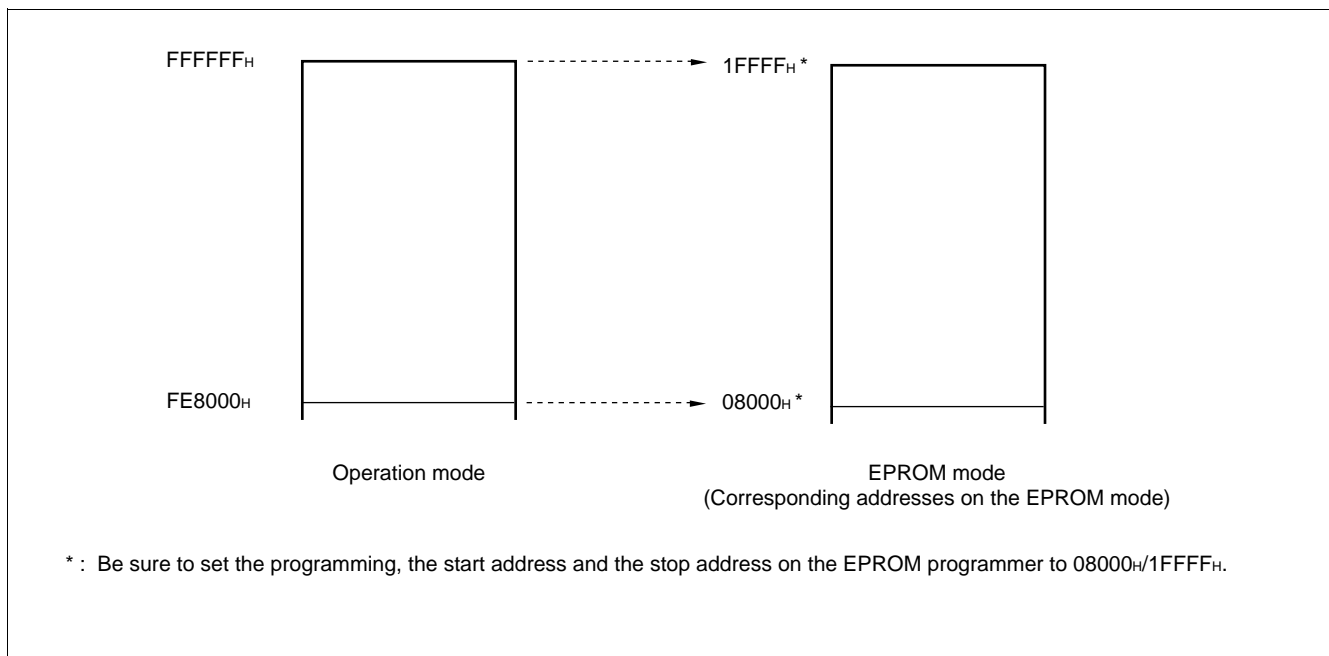

1. Program Mode

When shipped from Fujitsu, and after each erasure, all bits (96 K × 8 bits) in the MB90P224A/P224B/W224A/W224B are in the “1” state. Data is written to the ROM by selectively programming “0’s” into the desired bit locations. Bits cannot be set to “1” electrically.

2. Programming Procedure

- (1) Set the EPROM programmer to MBM27C1000.
- (2) Load program data into the EPROM programmer at 08000_H to 1FFFF_H.

Note that ROM addresses FE8000_H to FFFFFFF_H in the operation mode in the MB90P224A/P224B/W224A/W224B series assign to 08000_H to 1FFFF_H in the EPROM mode (on the EPROM programmer).

- (3) Mount the MB90P224A/P224B/W224A/W224B on the adapter socket, then fit the adapter socket onto the EPROM programmer. When mounting the device and the adapter socket, pay attention to their mounting orientations.
- (4) Start programming the program data to the device.
- (5) If programming has not successfully resulted, connect a capacitor of approx. 0.1 μF between V_{CC} and GND, between V_{PP} and GND.

Note: The mask ROM products (MB90223, MB90224) does not support EPROM mode. Data cannot, therefore, be read by the EPROM programmer.

3. EPROM Programmer Socket Adapter and Recommended Programmer Manufacturer

Part No.		MB90P224B	
Package		QFP-120	
Compatible socket adapter Sun Hayato Co., Ltd.		ROM-120QF-32DP-16F	
Recommended programmer manufacturer and programmer name	Advantest corp.	R4945A (main unit) + R49451A (adapter)	Recommended

Inquiry: Sun Hayato Co., Ltd.: TEL: (81)-3-3986-0403
 FAX: (81)-3-5396-9106
 Advantest Corp.: TEL: Except JAPAN (81)-3-3930-4111

4. Erase Procedure

Data written in the MB90W224A/W224B is erased (from "0" to "1") by exposing the chip to ultraviolet rays with a wavelength of 2,537 Å through the translucent cover.

Recommended irradiation dosage for exposure is 10 Wsec/cm². This amount is reached in 15 to 20 minutes with a commercial ultraviolet lamp positioned 2 to 3 cm above the package (when the package surface illuminance is 1200 μW/cm²).

If the ultraviolet lamp has a filter, remove the filter before exposure. Attaching a mirrored plate to the lamp increases the illuminance by a factor of 1.4 to 1.8, thus shortening the required erasure time. If the translucent part of the package is stained with oil or adhesive, transmission of ultraviolet rays is degraded, resulting in a longer erasure time. In that case, clean the translucent part using alcohol (or other solvent not affecting the package).

The above recommended dosage is a value which takes the guard band into consideration and is a multiple of the time in which all bits can be evaluated to have been erased. Observe the recommended dosage for erasure; the purpose of the guard band is to ensure erasure in all temperature and supply voltage ranges. In addition, check the life span of the lamp and control the illuminance appropriately.

Data in the MB90W224A/W224B is erased by exposure to light with a wavelength of 4,000 Å or less.

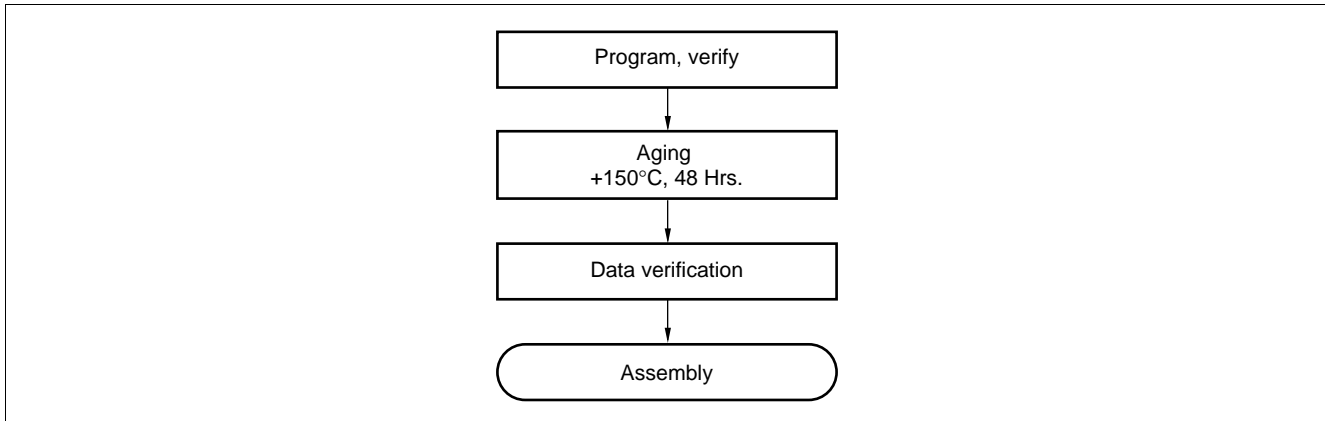

Data in the device is also erased even by exposure to fluorescent lamp light or sunlight although the exposure results in a much lower erasure rate than exposure to 2,537 Å ultraviolet rays. Note that exposure to such lights for an extended period will therefore affect system reliability. If the chip is used where it is exposed to any light with a wavelength of 4,000 Å or less, cover the translucent part, for example, with a protective seal to prevent the chip from being exposed to the light.

Exposure to light with a wavelength of 4,000 to 5,000 Å or more will not erase data in the device. If the light applied to the chip has a very high illuminance, however, the device may cause malfunction in the circuit for reasons of general semiconductor characteristics. Although the circuit will recover normal operation when exposure is stopped, the device requires proper countermeasures for use in a place exposed continuously to such light even though the wavelength is 4,000 Å or more.

MB90220 Series

5. Recommended Screening Conditions

High temperature aging is recommended as the pre-assembly screening procedure.

6. Programming Yield

MB90P224A/P224B cannot be write-tested for all bits due to their nature. Therefore the write yield cannot always be guaranteed to be 100%.

7. Pin Assignments in EPROM Mode

(1) Pins Compatible with MBM27C1000

Initial value

0: The initial value of this bit is "0".

1: The initial value of this bit is "1".

X: The initial value of this bit is undefined.

—: This bit is not used. The initial value is undefined.

*: The initial value of this bit varies with the reset source.

#: The initial value of this bit varies with the operation mode.

*1: Access prohibited

*2: Only this area is open to external access in the area below address 0000FF_H (inclusive). All addresses which are not described in the table are reserved areas, and accesses to these areas are handled in the same manner as for internal areas. The access signal for the external bus is not generated.

*3: When an external bus is enable mode, never access to resistors which are not used as general ports in areas address 000000_H to 000005_H or 000010_H to 000015_H.

Stack fault	×	#255	FF _H	FFFC00 _H	—	—

◎: EI²OS is supported (with stop request).

□: EI²OS is supported (without stop request).

○: EI²OS is supported; however, since two interrupt sources are allocated to a single ICR, in case EI²OS is used for one of the two, EI²OS and ordinary interrupt are not both available for the other (with stop request).

△: EI²OS is supported; however, since two interrupt sources are allocated to a single ICR, in case EI²OS is used for one of the two, EI²OS and ordinary interrupt are not both available for the other (without stop request).

×: EI²OS is not supported.

Note: Since the interrupt sources having interrupt vector Nos. 15 to 18, 20, and 25 to 28 are OR'ed, respectively, select them by means of the interrupt enable bits of each resource.

If EI²OS is used with the above-mentioned interrupt sources OR'ed with the interrupt vector Nos. 15 to 18, 20, and 25 to 28, be sure to activate one of the interrupt sources.

Also in this case, a request flag in the same series as the one interrupt source is likely to be cleared automatically by EI²OS.

Assume for example that an interrupt for compare 4 of the interrupt vector No. 25 is activated at this time by ICR07, so that the compare 6 is disabled. If EI²OS is activated at this time by ICR07, so that the compare 6 interrupt takes place during generation of or simultaneously with the compare 4 interrupt, not only the interrupt flag for the compare 4 but also that for the compare 6 will be automatically cleared after EI²OS is automatically transferred due to the compare 4 interrupt.

■ PERIPHERAL RESOURCES

1. Parallel Ports

The MB90220 series has 86 I/O pins and 16 open-drain I/O pins.

(1) Register Configuration

• Port 0 to C Data Register (PDR0 to PDRC)

Register name	Address	bit15	bit14	bit13	bit12	bit11	bit10	bit9	bit8	Initial value

MB90220 Series

(2) Block Diagram

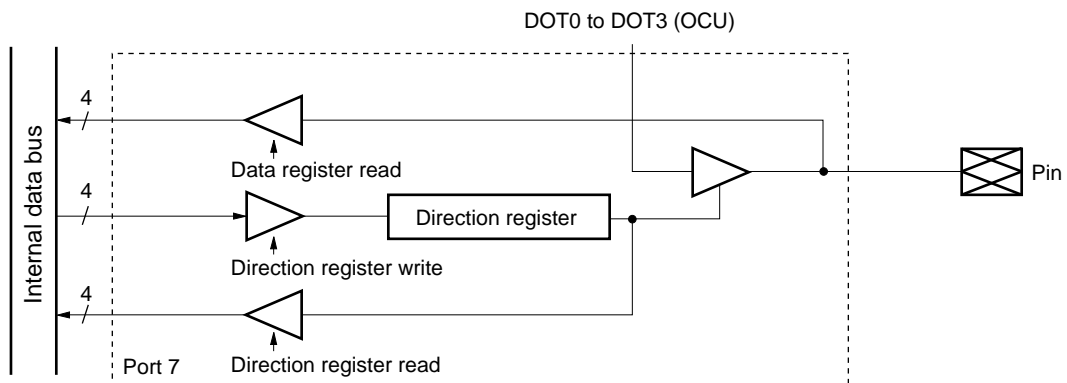

• I/O Port (Port 0 to 5, 8, and A to C)

• I/O Ports with an Open-drain output (Port 6, and 9)

• I/O Port (Port 7)

Note: Port 7 is input port. This pin also usable as I/O port for OCU internal function.

2. 16-bit Reload Timer (with Event Count Function)

The 16-bit reload timer 1 consists of a 16-bit down counter, a 16-bit reload register, an input pin (TIN), an output pin (TOT), and a control register. The input clock can be selected from among three internal clocks and one external clock. At the output pin (TOT), the pulses in the toggled output waveform are output in the reload mode; the rectangular pulses indicating that the timer is counting are in the single-shot mode. The input pin (TIN) can be used for event input in the event count mode, and for trigger input or gate input in the internal clock mode.

The MB90220 series has six channels for this timer.

(1) Register Configuration

• Timer Control Status Register 0 to 5 (TMCSR0 to TMCSR5)

Register name	Address
TMCSR0	000041H

TMRLR5	001F46 _H

(2) Block Diagram

3. UART0

UART0 is a serial I/O port for synchronous or asynchronous communication with external resources. It has the following features:

- Full duplex double buffer
- CLK synchronous and CLK asynchronous data transfers capable
- Multiprocessor mode support (Mode 2)
- Built-in dedicated baud-rate generator (12 rates)
- Arbitrary baud-rate setting from external clock input or internal timer
- Variable data length (7 to 9 bits (without parity bit); 6 to 8 bits (with parity bit))
- Error detection function (Framing, overrun, parity)
- Interrupt function (Two sources for transmission and reception)
- Transfer in NRZ format

The MB90220 has three of these modules on chip.

(1) Register Configuration

• Mode Control Register 0 to 2 (UMC0 to UMC2)

Serial mode control register

• Status Register 0 to 2 (USR0 to USR2)

• Input Data Register 0 to 2 (UIDR0 to UIDR2)/Output Data Register 0 to 2 (UODR0 to UODR2)

• Rate and Data Register 0 to 2 (URD0 to URD2)

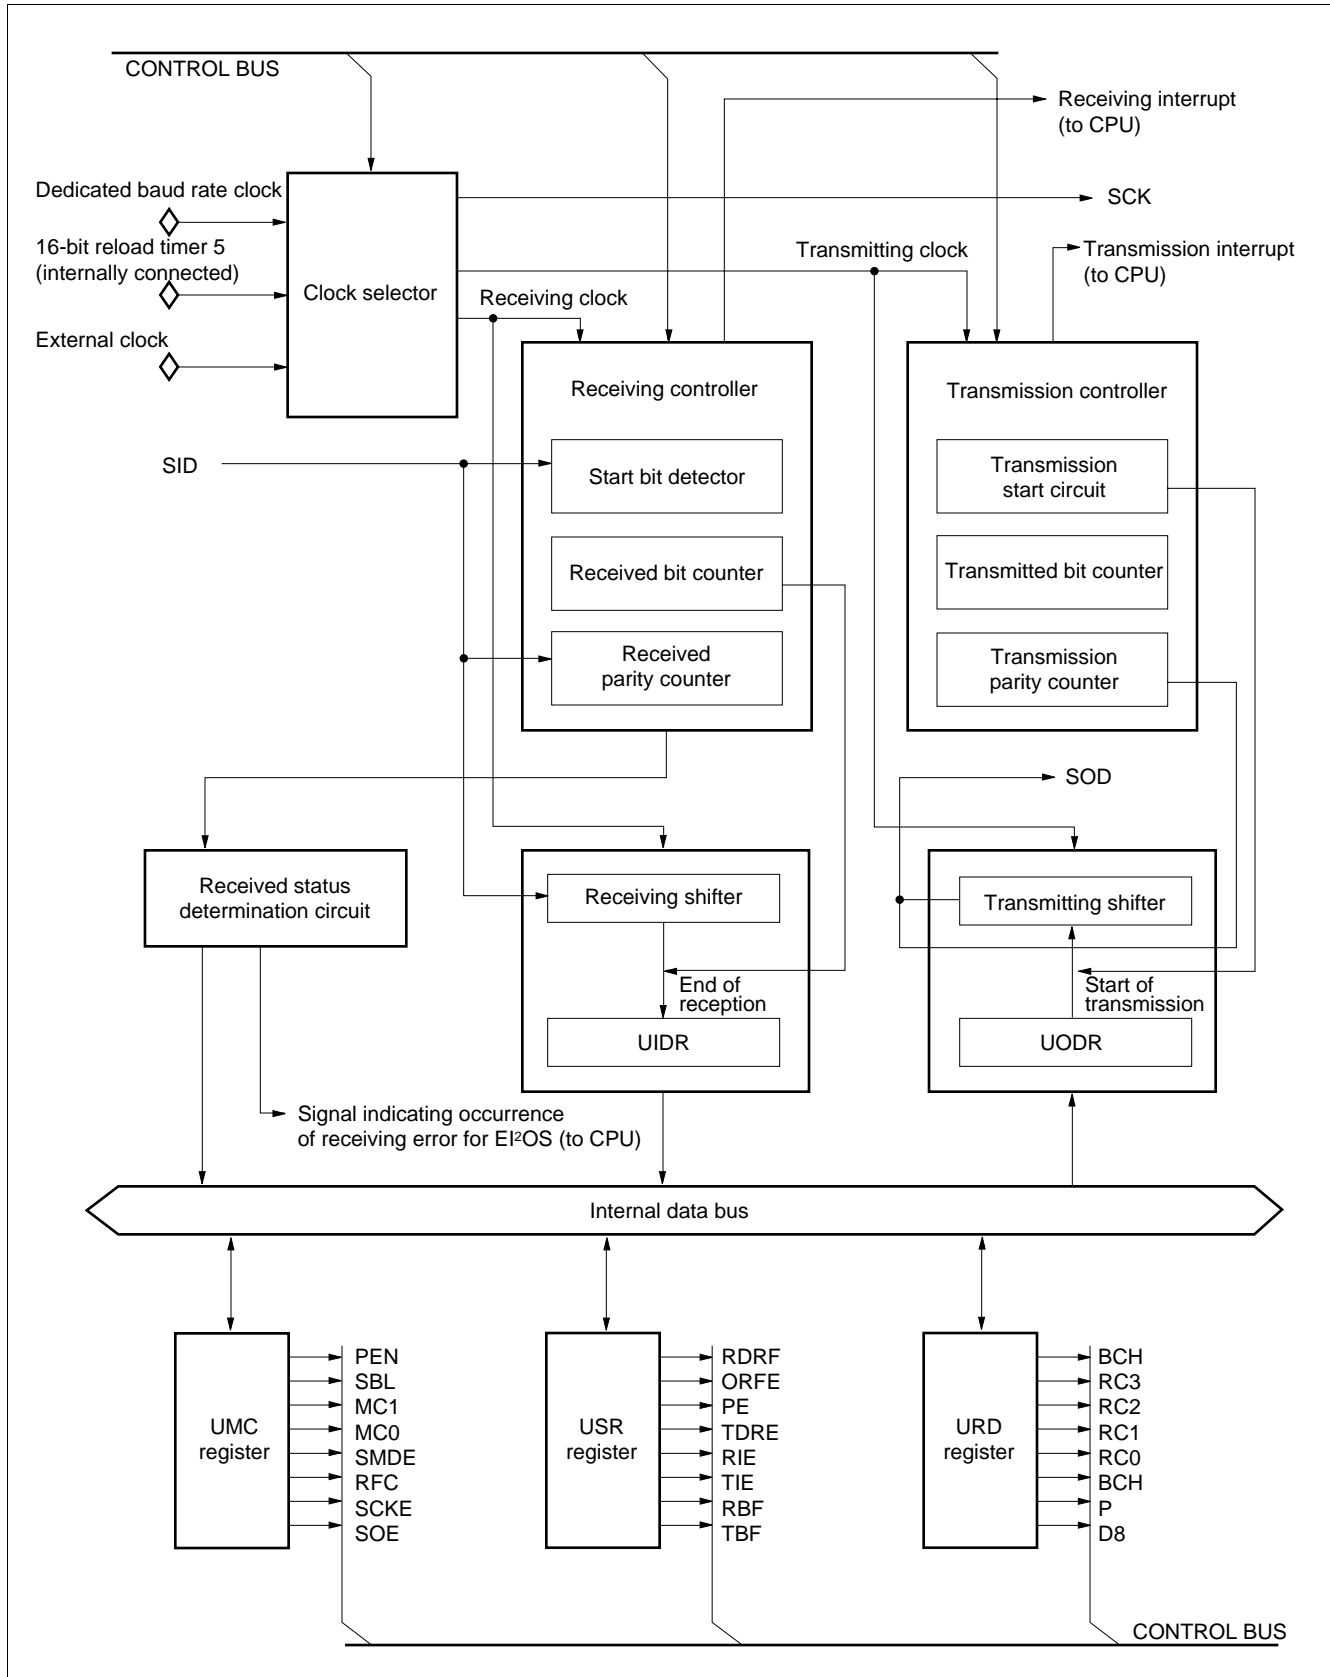

• UART CTS Control Register (UCCR)

MB90220 Series

(2) Block Diagram

4. UART1

The UART1 is a serial I/O port for asynchronous communications (start-stop synchronization) or CLK synchronized communications. It has the following features:

- Full-duplex double buffering
- Permits asynchronous (start-stop synchronization) and CLK synchronous communications
- Multiprocessor mode support
- Built-in dedicated baud rate generator
 - Asynchronous: 9615, 31250, 4808, 2404, and 1202 bps
 - CLK synchronization: 1 M, 500 K, 250 K bps
- Arbitray baud-rate setting from external clock input or internal timer
- Error detection function (parity errors, framing errors, and overrun errors)
- Transfer in format NRZ
- Extended supports intelligent I/O service

(1) Register Configuration

• Mode Register (SMR)

Register name	Address	bit7	bit6	bit5	bit4	bit3	bit2	bit1	bit0	Initial value

(2) Block Diagram

5. 10-bit A/D Converter

The 10-bit A/D converter converts analog input voltage into a digital value. The features of this module are described below:

- Conversion time: 6.125 μ s/channel (min.) (with machine clock running at 16 MHz)
- Uses RC-type sequential comparison and conversion method with built-in sample and hold circuit
- 10-bit resolution
- Analog input can be selected by software from among 16 channels
 - Single-conversion mode: Selects and converts one channel.
 - Scan conversion mode: Converts several consecutive channels (up to 16 can be programmed).
 - One-shot mode: Converts the specified channel once and terminates.
 - Continuous conversion mode: Repeatedly converts the specified channel.
 - Stop conversion mode: Pauses after converting one channel and waits until the next startup (permits synchronization of start of conversion).
- When A/D conversion is completed, an "A/D conversion complete" interrupt request can be issued to the CPU. Because the generation of this interrupt can be used to start up the EI²OS and transfer the A/D conversion results to memory, this function is suitable for continuous processing.
- Startup triggers can be selected from among software, an external trigger (falling edge), and a timer (rising edge).

(1) Register Configuration

• A/D Channel Setting Register (ADCH)

This register specifies the A/D converter conversion channel.

Register name	Address	bit7	bit6	bit5	bit4	bit3	bit2	bit1	bit0	Initial value
ADCH	000032H	ANS3	ANS2	ANS1	ANS0	ANE3	ANE2	ANE1	ANE0	00000000 _B
		(R/W)	(R/W)	(R/W)	(R/W)	(R/W)	(R/W)	(R/W)	(R/W)	

• A/D Mode Register (ADMD)

This register specifies the A/D converter operation mode and the startup source.

Register name	Address	bit15	bit14	bit13	bit12	bit11	bit10	bit9	bit8	Initial value

6. PWC (Pulse Width Count) Timer

The PWC (pulse width count) timer is a 16-bit multifunction up-count timer with an input-signal pulse-width count function and a reload timer function. The hardware configuration of this module is a 16-bit up-count timer, an input pulse divider with divide ratio control register, four count input pins, and a 16-bit control register. Using these components, the PWC timer provides the following features:

- Timer functions: An interrupt request can be generated at set time intervals.
Pulse signals synchronized with the timer cycle can be output.
The reference internal clock can be selected from among three internal clocks.
 - Pulse-width count functions: The time between arbitrary pulse input events can be counted.
The reference internal clock can be selected from among three internal clocks.
Various count modes:
 - “H” pulse width (↑ to ↓)/“L” pulse width (↓ to ↑)
 - Rising-edge cycle (↑ to ↑/Falling-edge cycle (↓ to ↓)
 - Count between edges (↑ or ↓ to ↓ or ↑)
- Cycle count can be performed by 2^{2n} division ($n = 1, 2, 3, 4$) of the input pulse, with an 8 bit input divider.
An interrupt request can be generated once counting has been performed.
The number of times counting is to be performed (once or subsequently) can be selected.

The MB90220 series has four channels for this module.

(1) Register Configuration

• PWC Control Status Register 0 to 3 (PWCSR0 to PWCSR3)

PWC ch. 3	PA 4/PWC 3/POT 3/ASR 3

7. DTP/External Interrupts

DTP (Data Transfer Peripheral) is located between external peripherals and the F²MC-16F CPU. It receives a DMA request or an interrupt request generated by the external peripherals and reports it to the F²MC-16F CPU to activate the extended intelligent I/O service or interrupt handler. The user can select two request levels of “H” and “L” for extended intelligent I/O service or, and four request levels of “H,” “L,” rising edge and falling edge for external interrupt requests. In MB90220, only parts corresponding to INT2 to INT0 are usable as external interrupt/DTP request.

Parts corresponding to INT7 to INT3 cannot be used as external interrupt/DTP request, but only for edge detection at external terminals.

Note: INT7 to INT3 are not usable as DTP/external interrupts.

(1) Register Configuration

• DTP/Interrupt Enable Register (ENIR)

Register name	Address	bit7	bit6	bit5	bit4	bit3	bit2	bit1	bit0	Initial value

8. 24-bit Timer Counter

The 24-bit timer counter consists of a 24-bit up-counter, an 8-bit output buffer register, and a control register. The count value output by this timer counter is used to generate the base time used for input capture and output compare.

The interrupt functions provided are timer overflow interrupts and timer intermediate bit interrupts. The intermediate bit interrupt permits four time settings.

The 24-bit timer counter value is cleared to all zeroes by a reset.

(1) Register Configuration

MB90220 Series

9. OCU (Output Compare Unit)

The OCU (Output Compare Unit) consists of a 24-bit output compare register, a comparator, and a control register.

The match detection signal is output when the contents of the output compare register match the contents of the 24-bit timer counter. This match detection signal can be used to change the output value of the corresponding pin, or can be used to generate an interrupt. One block consists of four output compare units, and the four output compare registers use one comparator to perform time division comparisons.

(1) Register Configuration

• OCUO Control Register 00, 01 (CCR00, CCR01)

• OCUO Control Register 10, 11 (CCR10, CCR11)

• OCU Compare Low-order Data Register 00 to 07 (CPR00L to CPR07L)

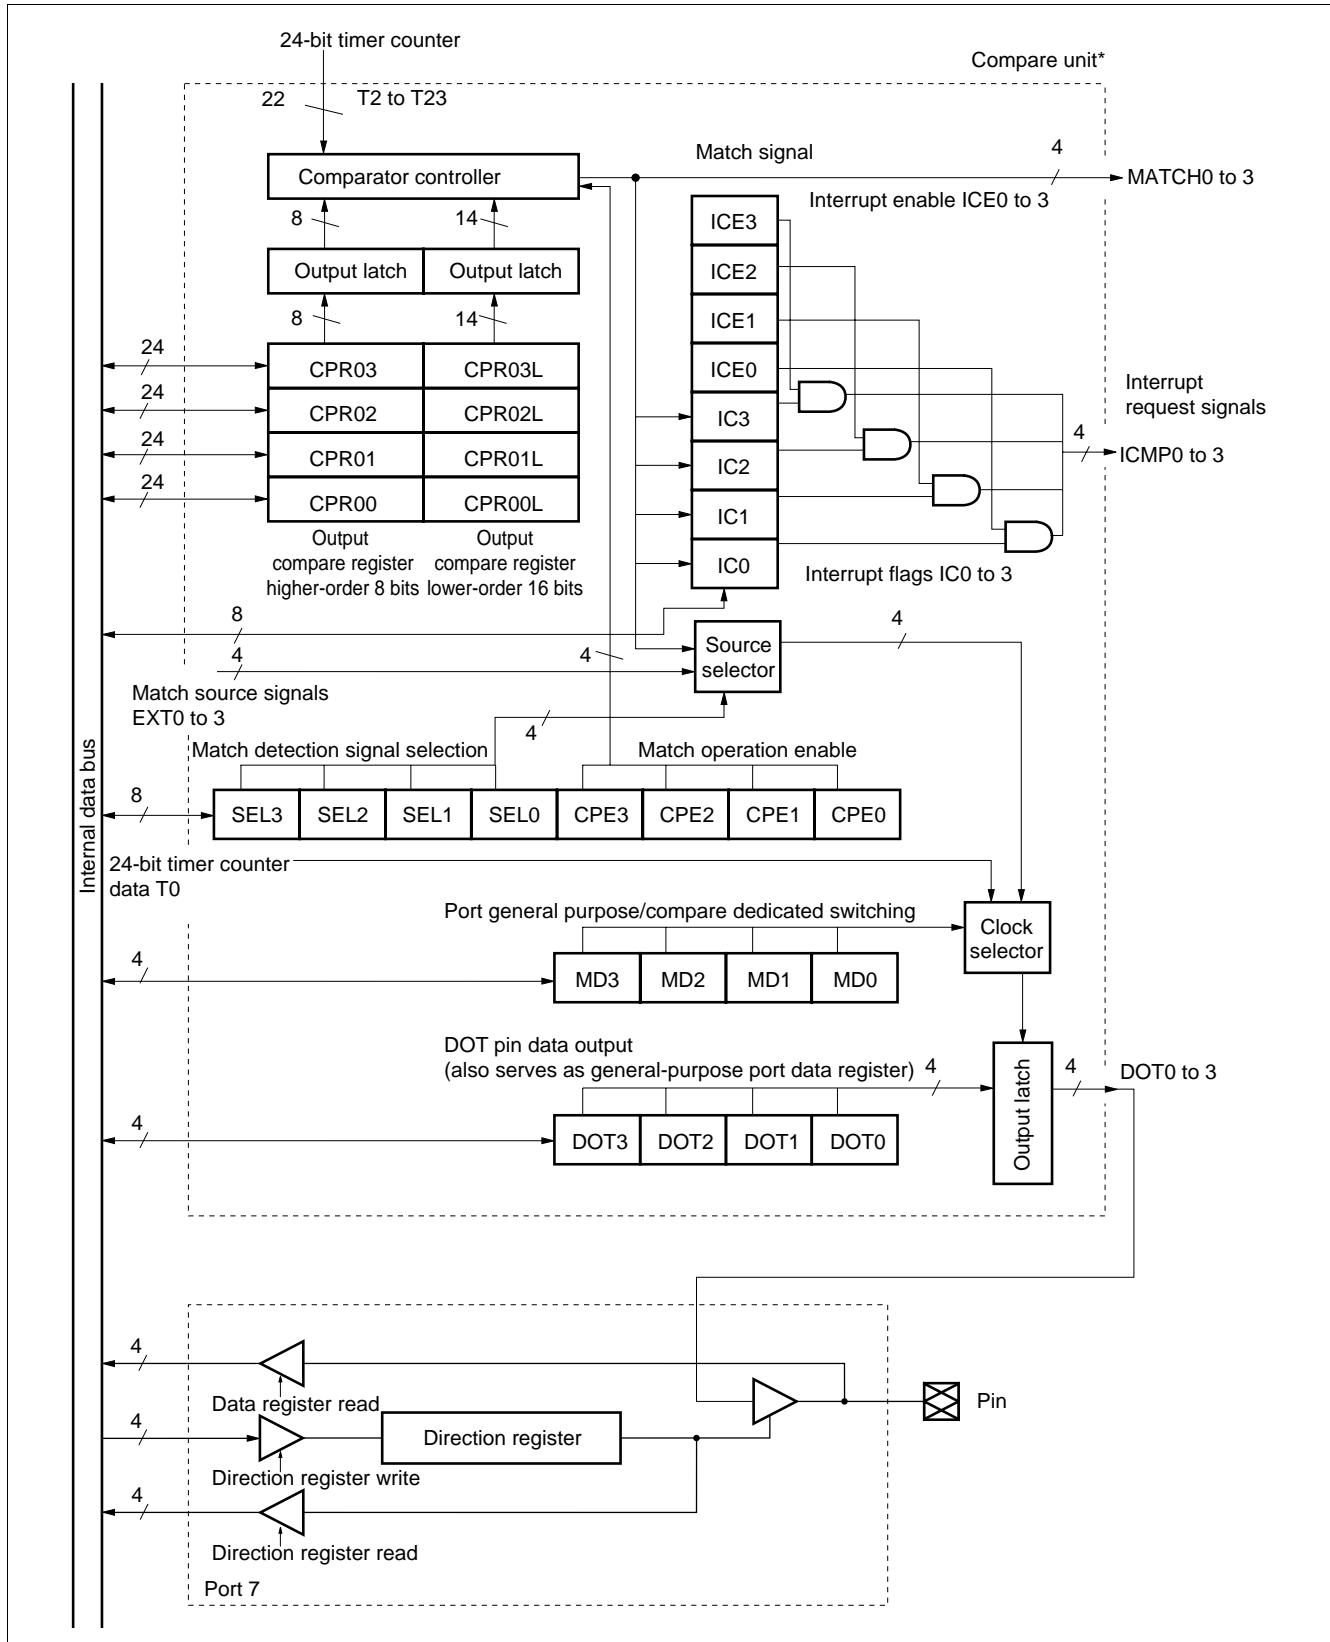

• Output Compare High-order Data Register 00 to 07 (CPR00H to CPR07H)

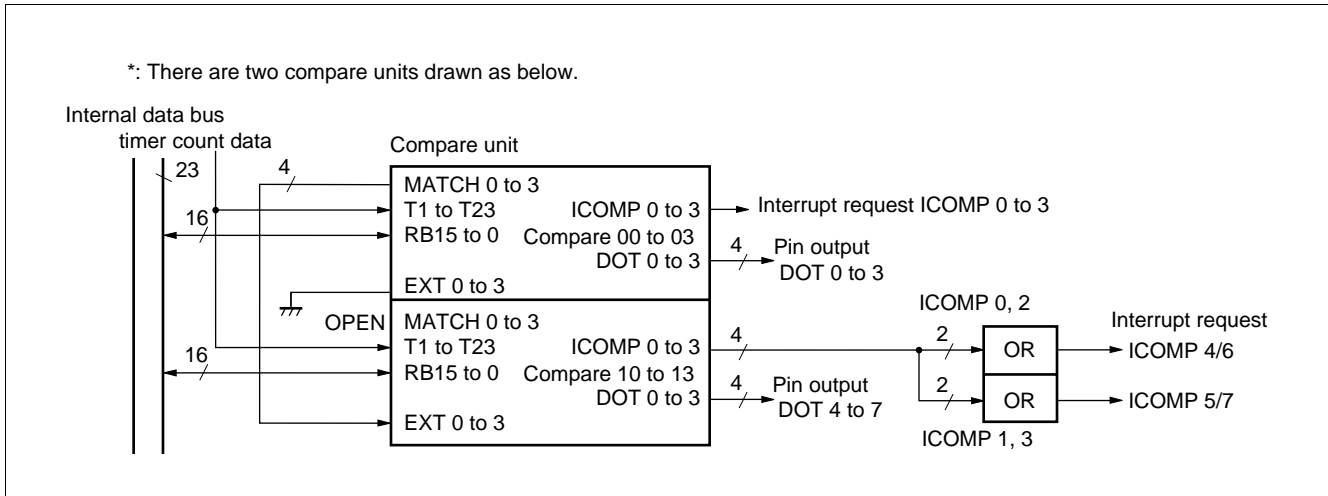

MB90220 Series

10. ICU (Input Capture Unit)

This module detects either the rising edge, falling edge, or both edges of an externally input waveform and holds the value of the 24-bit timer counter at that time, while at the same time the module generates an interrupt request for the CPU. The module consists of a 24-bit input capture data register and a control register. There are four external input pins (ASR0 to ASR3); the operation of each input is described below.

ASR0 to ASR3: Each of these input pins has a corresponding input capture register. When the specified valid edge (\uparrow or \downarrow or $\uparrow\downarrow$) is detected, the register can be used to store the 24-bit timer counter value.

(1) Register Configuration

11. 16-bit PPG Timer

This module can output a pulse synchronized with an external trigger or a software trigger. In addition, the cycle and duty ratio of the output pulse can be changed as desired by overwriting the two 16-bit register values.

PWM function: Synchronizes pulse with trigger, and permits programming of the pulse output by overwriting the register values mentioned above.

This function permits use as a D/A converter with the addition of external circuits.

One-shot function: Detects the edge of trigger input, and permits single-pulse output. There is no trigger input for PPG1.

This module consists of a 16-bit down-counter, a prescaler, a 16-bit synchronization setting register, a 16-bit duty register, a 16-bit control register, one external trigger input pin, and one PPG output pin.

Write-inhibit RAM areas: 000D00H to 000EFFH (MB90223)

001300H to 0014FFH (MB90224/P224A/P224B/W224A/W224B)

001500H to 0018FFH (MB90V220)

(3) Block Diagram

15. Low-power Consumption Modes, Oscillation Stabilization Delay Time, and Gear Function

The MB90220 series has three low-power consumption modes: the sleep mode, the stop mode, the hardware standby mode, and gear function.

Sleep mode is used to suspend only the CPU operation clock; the other components remain in operation. Stop mode and hardware standby mode stop oscillation, minimizing the power consumption while holding data.

The gear function divides the external clock frequency, which is used usually as it is, to provide a lower machine clock frequency. This function can therefore lower the overall operation speed without changing the oscillation frequency. The function can select the machine clock as a division of the frequency of crystal oscillation or external clock input by 1, 2, 4, or 16.

The OSC1 and OSC0 bits can be used to set the oscillation stabilization delay time for wake-up from stop mode or hardware standby mode.

(1) Register Configuration

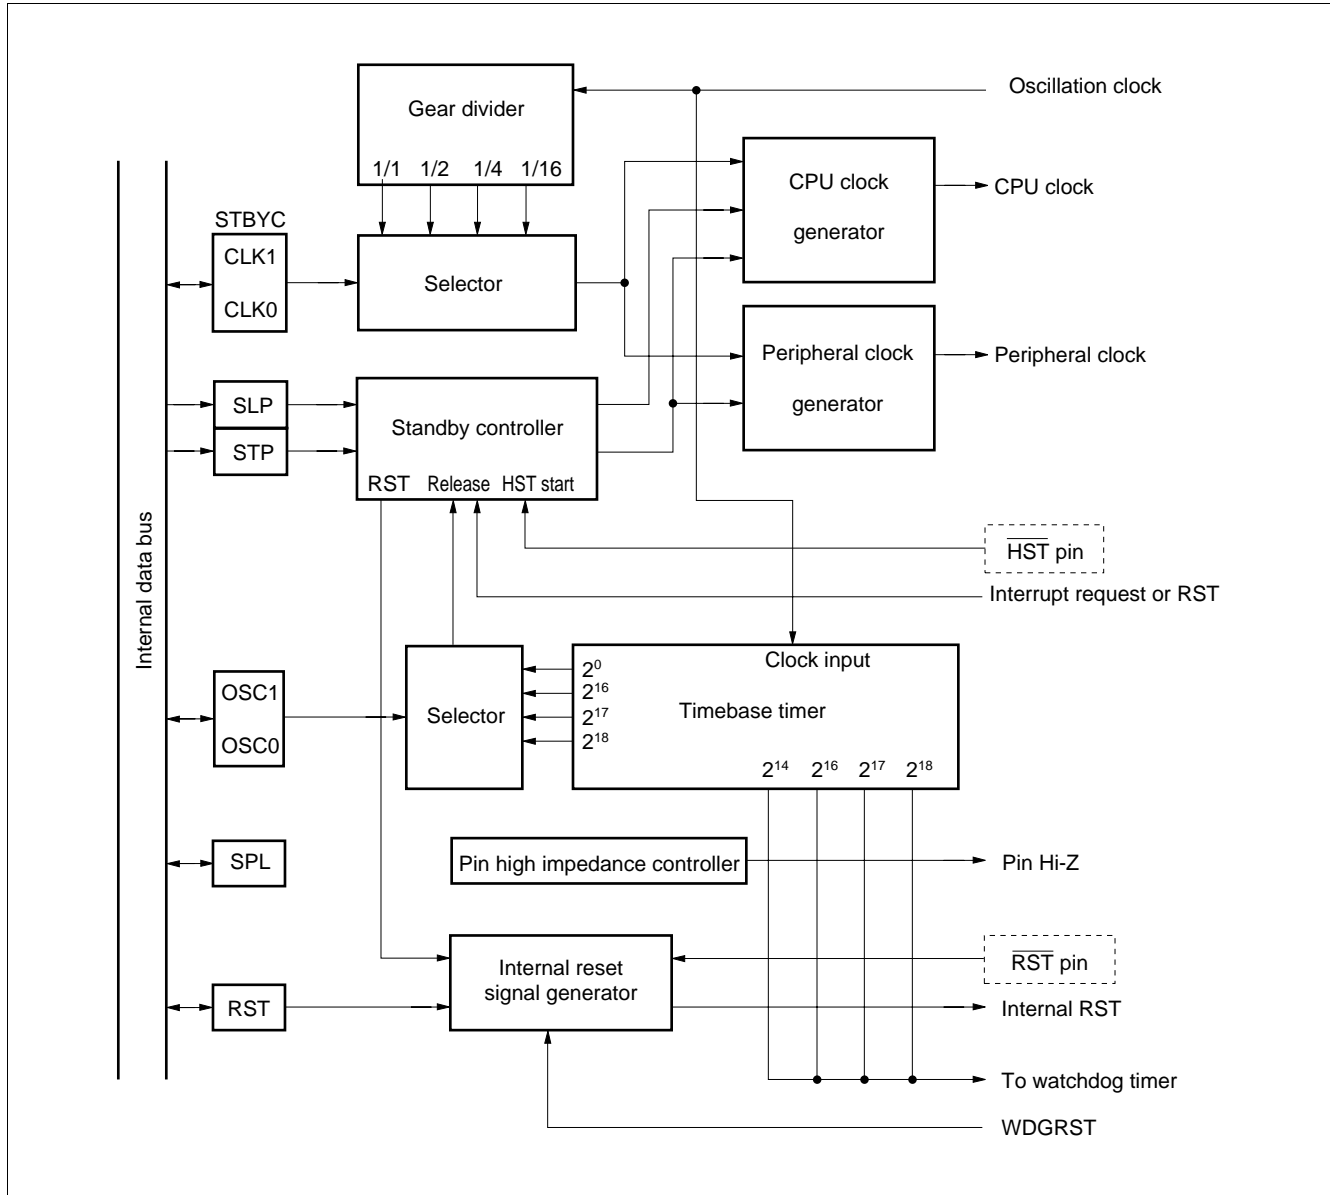

- Standby Control Register (STBYC)

Register name	Address	bit7	bit6	bit5	bit4	bit3	bit2	bit1	bit0	Initial value

* : Excluding the temperature rise due to the heat produced.

WARNING: Recommended operating conditions are normal operating ranges for the semiconductor device. All the device's electrical characteristics are warranted when operated within these ranges.

Always use semiconductor devices within the recommended operating conditions. Operation outside these ranges may adversely affect reliability and could result in device failure.

No warranty is made with respect to uses, operating conditions, or combinations not represented on the data sheet. Users considering application outside the listed conditions are advised to contact their FUJITSU representative beforehand.

MB90220 Series

3. DC Characteristics

Single-chip mode MB90223/224/P224B/W224B : ($V_{CC} = +4.5\text{ V to }+5.5\text{ V}$, $V_{SS} = 0.0\text{ V}$, $T_A = -40^\circ\text{C to }+105^\circ\text{C}$)
 MB90P224A/W224A : ($V_{CC} = +4.5\text{ V to }+5.5\text{ V}$, $V_{SS} = 0.0\text{ V}$, $T_A = -40^\circ\text{C to }+85^\circ\text{C}$)
 External bus mode : ($V_{CC} = +4.5\text{ V to }+5.5\text{ V}$, $V_{SS} = 0.0\text{ V}$, $T_A = -40^\circ\text{C to }+70^\circ\text{C}$)

Parameter	Symbol	Pin name	Condition	Value			Unit	Remarks
				Min.	Typ.	Max.		
“H” level input voltage	V_{IH}	X0	—	$0.7 V_{CC}$	—	$V_{CC} + 0.3$	V	CMOS level input
	V_{IHS}	*1	—	$0.8 V_{CC}$	—	$V_{CC} + 0.3$	V	Hysteresis input
	V_{IHM}	MD0 to MD2	—	$V_{CC} - 0.3$	—	$V_{CC} + 0.3$	V	
“L” level input voltage	V_{IL}	X0	—	$V_{SS} - 0.3$	—	$0.3 V_{CC}$	V	CMOS level input
	V_{ILS}	*1	—	$V_{SS} - 0.3$	—	$0.2 V_{CC}$	V	Hysteresis input
	V_{ILM}	MD0 to MD2	—	$V_{SS} - 0.3$	—	$V_{SS} + 0.3$	V	
“H” level output voltage	V_{OH}	*2	$V_{CC} = 4.5\text{ V}$ $I_{OH} = -4.0\text{ mA}$	$V_{CC} - 0.5$	—	V_{CC}	V	
	V_{OH1}	X1	$V_{CC} = 4.5\text{ V}$ $I_{OH} = -2.0\text{ mA}$	$V_{CC} - 2.5$	—	V_{CC}	V	
“L” level output voltage	V_{OL}	*3	$V_{CC} = 4.5\text{ V}$ $I_{OL} = 4.0\text{ mA}$	0	—	0.4	V	
	V_{OL1}	X1	$V_{CC} = 4.5\text{ V}$ $I_{OL} = 2.0\text{ mA}$	0	—	$V_{CC} - 2.5$	V	
Input leakage current	I_{I1}	*1	$V_{CC} = 5.5\text{ V}$ $0.2 V_{CC} < V_{I1} < 0.8 V_{CC}$	—	—	± 10	μA	Hysteresis input Except pins with pull-up/pull-down resistor and $\overline{\text{RST}}$ pin
	I_{I2}	X0	$V_{CC} = 5.5\text{ V}$ $0.2 V_{CC} < V_{I2} < 0.8 V_{CC}$	—	—	± 20	μA

*4: A list of availabilities of pull-up/pull-down resistors

Pin name	MB90223/224	MB90P224A/W224A	MB90P224B/W224B
$\overline{\text{RST}}$	Availability of pull-up resistors is optionally defined.	Pull-up resistors available	Unavailable
MD1	Pull-up resistors available	Unavailable	Unavailable
MD0, MD2	Pull-up resistors available	Unavailable	Unavailable

*5: V_{CC} = +5.0 V, V_{SS} = 0.0 V, T_A = +25°C, F_C = 16 MHz

*6: The current value applies to the CPU stop mode with A/D converter inactive (V_{CC} = AV_{CC} = AVRH = +5.5 V).

*7: Other than V_{CC}, V_{SS}, AV_{CC} and AV_{SS}

*8: Measurement condition of power supply current; external clock pin and output pin are open.

Measurement condition of V_{CC}; see the table above mentioned.

*9: F_C = 12 MHz for MB90223

4. AC Characteristics

(1) Clock Timing Standards

Single-chip mode MB90223/224/P224B/W224B : ($V_{CC} = +4.5$ to $+5.5$ V, $V_{SS} = 0.0$ V, $T_A = -40^\circ\text{C}$ to $+105^\circ\text{C}$)
 MB90P224A/W224A : ($V_{CC} = +4.5$ to $+5.5$ V, $V_{SS} = 0.0$ V, $T_A = -40^\circ\text{C}$ to $+85^\circ\text{C}$)
 External bus mode : ($V_{CC} = +4.5$ to $+5.5$ V, $V_{SS} = 0.0$ V, $T_A = -40^\circ\text{C}$ to $+70^\circ\text{C}$)

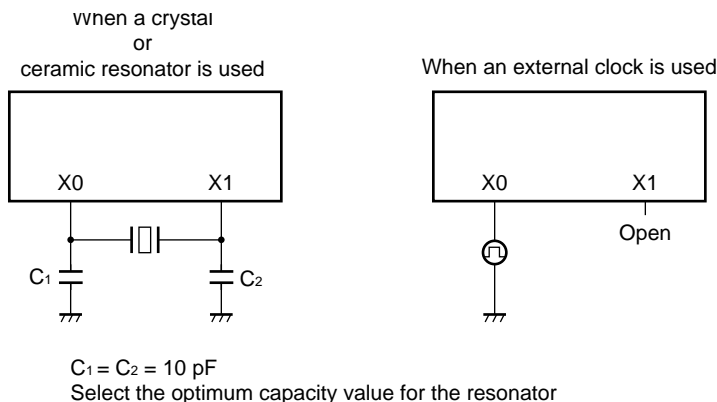

Parameter	Symbol	Pin name	Condition	Value			Unit	Remarks
				Min.	Typ.	Max.		
Clock frequency	F_c	X0, X1	—	10	—	16	MHz	MB90224/ P224A/P224B MB90W224A/ W224B
				10	—	12	MHz	MB90223
Clock cycle time	t_c	X0, X1	—	62.5	—	100	ns	MB90224/ P224A/P224B MB90W224A/ W224B
				83.4	—	100	ns	MB90223
Input clock pulse width	P_{WH} P_{WL}	X0	—	$0.4 t_c$	—	$0.6 t_c$	ns	Equivalent to 60% duty ratio
Input clock rising/falling times	t_{cr} t_{cf}	X0	—	—	—	8	ns	$t_{cr} + t_{cf}$

$$t_c = 1/f_c$$

(2) Clock Output Timing

(External bus mode: $V_{CC} = +4.5\text{ V to }+5.5\text{ V}$, $V_{SS} = 0.0\text{ V}$, $T_A = -40^\circ\text{C to }+70^\circ\text{C}$)

Parameter	Symbol	Pin name	Condition	Value			Unit	Remarks
				Min.	Typ.	Max.		
Machine cycle time	t_{CYC}	CLK	Load condition: 80 pF	62.5	—	1600	ns	MB90224/ P224A/P224B MB90W224A/ 224B
				83.4	—	1600	ns	MB90223
CLK $\uparrow \rightarrow$ CLK \downarrow	t_{CHCL}	CLK		$t_{CYC}/2 - 20$	—	$t_{CYC}/2$	ns	

$t_{CYC} = n/F_C$, n gear ratio (1, 2, 4, 16)

(3) Reset and Hardware Standby Input Standards

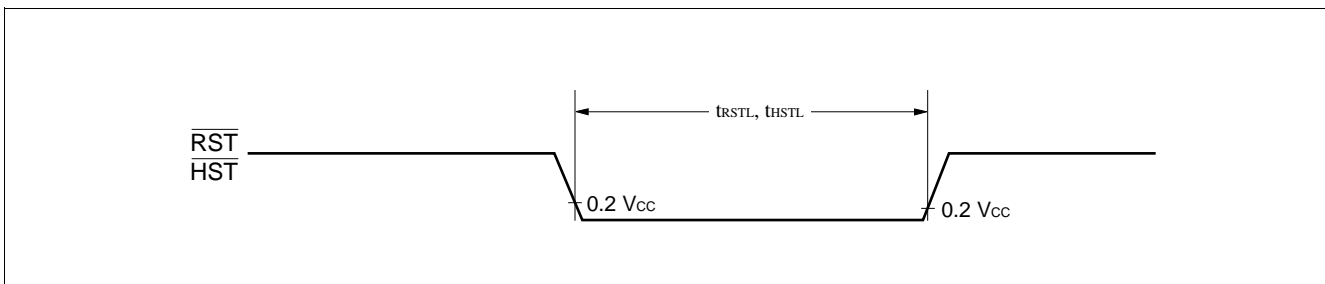

Single-chip mode MB90223/224/P224B/W224B: ($V_{CC} = +4.5\text{ V to }+5.5\text{ V}$, $V_{SS} = 0.0\text{ V}$, $T_A = -40^\circ\text{C to }+105^\circ\text{C}$)

MB90P224A/W224A : ($V_{CC} = +4.5\text{ V to }+5.5\text{ V}$, $V_{SS} = 0.0\text{ V}$, $T_A = -40^\circ\text{C to }+85^\circ\text{C}$)

External bus mode : ($V_{CC} = +4.5\text{ V to }+5.5\text{ V}$, $V_{SS} = 0.0\text{ V}$, $T_A = -40^\circ\text{C to }+70^\circ\text{C}$)

Parameter	Symbol	Pin name	Condition	Value			Unit	Remarks
				Min.	Typ.	Max.		
Reset input time	t_{RSTL}	$\overline{\text{RST}}$	—	$5 t_{CYC}$	—	—	ns	
Hardware standby input time	t_{HSTL}	$\overline{\text{HST}}$	—	$5 t_{CYC}$	—	—	ns	*

*: The machine cycle time (t_{CYC}) at hardware standby is set to 1/16 divided oscillation.

MB90220 Series

(4) Power on Supply Specifications (Power-on Reset)

Single-chip mode MB90223/224/P224B/W224B: ($V_{CC} = +4.5\text{ V to }+5.5\text{ V}$, $V_{SS} = 0.0\text{ V}$, $T_A = -40^\circ\text{C to }+105^\circ\text{C}$)
 MB90P224A/W224A : ($V_{CC} = +4.5\text{ V to }+5.5\text{ V}$, $V_{SS} = 0.0\text{ V}$, $T_A = -40^\circ\text{C to }+85^\circ\text{C}$)
 External bus mode : ($V_{CC} = +4.5\text{ V to }+5.5\text{ V}$, $V_{SS} = 0.0\text{ V}$, $T_A = -40^\circ\text{C to }+70^\circ\text{C}$)

Parameter	Symbol	Pin name	Condition	Value			Unit	Remarks
				Min.	Typ.	Max.		
Power supply rising time	t_R	V_{CC}	—	—	—	30	ms	*
Power supply cut-off time	t_{OFF}	V_{CC}	—	1	—	—	ms	

* : Before power supply rising, it is required to be $V_{CC} < 0.2\text{ V}$.

Notes: • Power-on reset assumes the above values.

- Whether the power-on reset is required or not, turn the power on according to these characteristics and trigger the power-on reset.
- There are internal registers (STBYC, etc.) which is initialized only by the power-on reset in the device.

• Power-on Reset

Note: Note on changing power supply

Even if above characteristics are not insufficient, abrupt changes in power supply voltage may cause a power-on reset. Therefore, at the time of a momentary changes such as when power is turned on, rise the power smoothly as shown below.

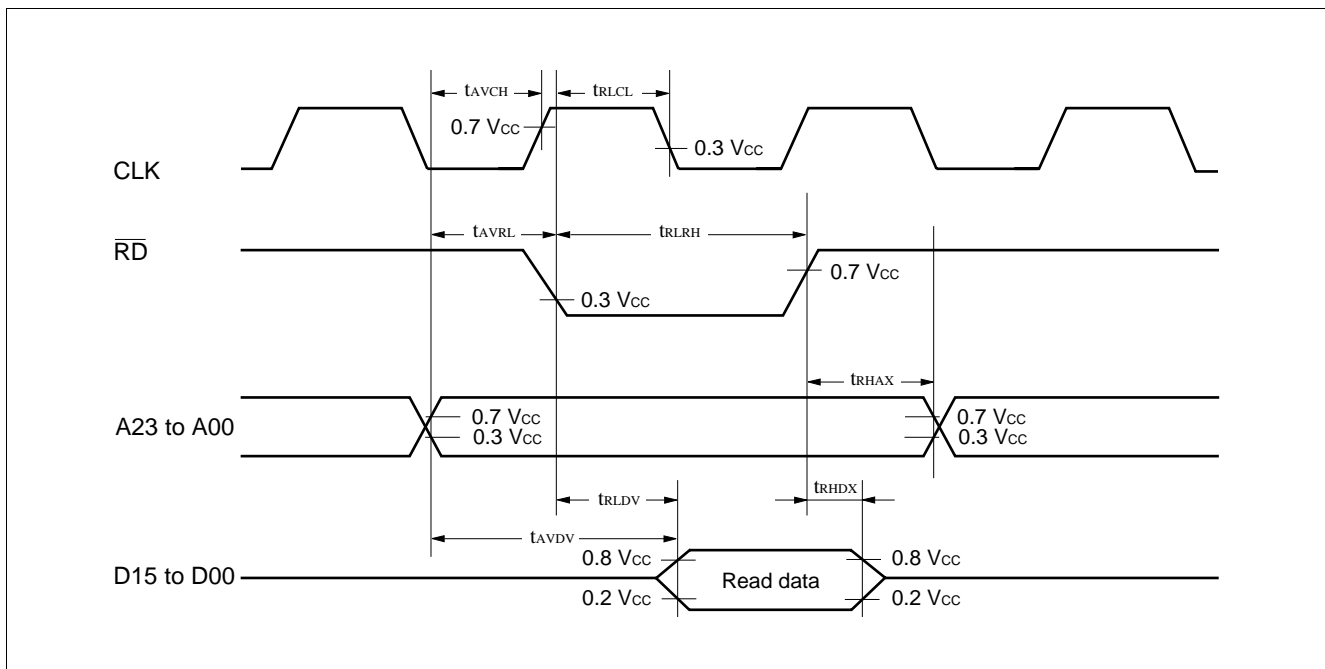

• Changing Power Supply

(5) Bus Read Timing

($V_{CC} = +4.5\text{ V to }+5.5\text{ V}$, $V_{SS} = 0.0\text{ V}$, $T_A = -40^\circ\text{C to }+70^\circ\text{C}$)

Parameter	Symbol	Pin name	Condition	Value		Unit	Remarks
				Min.	Max.		
Valid address $\rightarrow \overline{\text{RD}} \downarrow$ time	t_{AVRL}	A23 to A00	Load condition: 80 pF	$t_{\text{CYC}}/2 - 20$	—	ns	
$\overline{\text{RD}}$ pulse width	t_{RLRH}	$\overline{\text{RD}}$		$t_{\text{CYC}} - 25$	—	ns	
$\overline{\text{RD}} \downarrow \rightarrow$ Valid data input	t_{RLDV}	D15 to D00		—	$t_{\text{CYC}} - 30$	ns	
$\overline{\text{RD}} \uparrow \rightarrow$ Data hold time	t_{RHDX}			0	—	ns	
Valid address \rightarrow Valid data input	t_{AVDV}			—	$3 t_{\text{CYC}}/2 - 40$	ns	
$\overline{\text{RD}} \uparrow \rightarrow$ Address valid time	t_{RHAX}	A23 to A00		$t_{\text{CYC}}/2 - 20$	—	ns	
Valid address \rightarrow CLK \uparrow time	t_{AVCH}	A23 to A00 CLK		$t_{\text{CYC}}/2 - 25$	—	ns	
$\overline{\text{RD}} \downarrow \rightarrow$ CLK \downarrow time	t_{RLCL}	$\overline{\text{RD}}$, CLK		$t_{\text{CYC}}/2 - 25$	—	ns

(6) Bus Write Timing

($V_{CC} = +4.5\text{ V to }+5.5\text{ V}$, $V_{SS} = 0.0\text{ V}$, $T_A = -40^\circ\text{C to }+70^\circ\text{C}$)

Parameter	Symbol	Pin name	Condition	Value		Unit	Remarks
				Min.	Max.		
Valid address $\rightarrow \overline{WR} \downarrow$ time	t_{AVWL}	A23 to A00	Load condition: 80 pF	$t_{CYC}/2 - 20$	—	ns	
\overline{WR} pulse width	t_{WLWH}	\overline{WRL} , \overline{WRH}		$t_{CYC} - 25$	—	ns	
Valid data output $\rightarrow \overline{WR} \uparrow$ time	t_{DVWH}	D15 to D00		$t_{CYC} - 40$	—	ns	
$\overline{WR} \uparrow \rightarrow$ Data hold time	t_{WHDX}	D15 to D00		$t_{CYC}/2 - 20$	—	ns	
$\overline{WR} \uparrow \rightarrow$ Address valid time	t_{WHAX}	A23 to A00		$t_{CYC}/2 - 20$	—	ns	
$\overline{WR} \downarrow \rightarrow$ CLK \downarrow time	t_{WLCL}	\overline{WRL} , \overline{WRH} , CLK		$t_{CYC}/2 - 25$	—	ns	

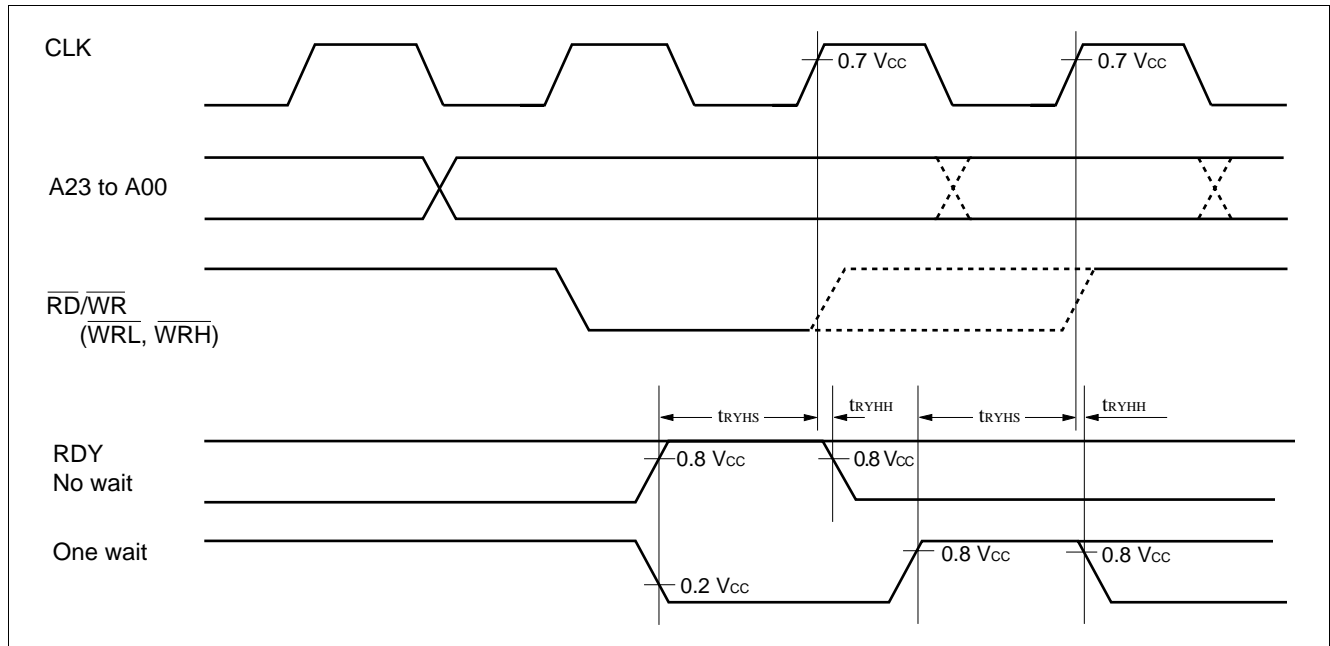

(7) Ready Input Timing

($V_{CC} = +4.5\text{ V to }+5.5\text{ V}$, $V_{SS} = 0.0\text{ V}$, $T_A = -40^\circ\text{C to }+70^\circ\text{C}$)

Parameter	Symbol	Pin name	Condition	Value		Unit	Remarks
				Min.	Max.		
RDY setup time	t_{RYHS}	RDY	Load condition: 80 pF	40	—	ns	
RDY hold time	t_{RYHH}	RDY		0	—	ns	

Note: Use the auto-ready function if the RDY setup time is insufficient.

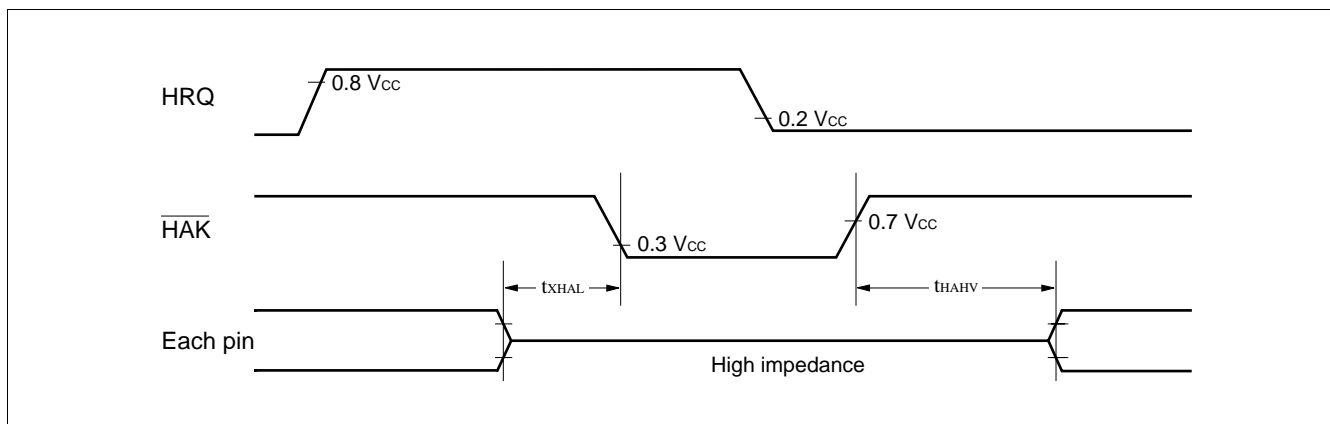

(8) Hold Timing

($V_{CC} = +4.5\text{ V to }+5.5\text{ V}$, $V_{SS} = 0.0\text{ V}$, $T_A = -40^\circ\text{C to }+70^\circ\text{C}$)

Parameter	Symbol	Pin name	Condition	Value		Unit	Remarks
				Min.	Max.		
Pin floating → $\overline{\text{HAK}} \downarrow$ time	t_{XHAL}	$\overline{\text{HAK}}$	Load condition: 80 pF	30	t_{CYC}	ns	
$\overline{\text{HAK}} \uparrow$ time → pin valid time	t_{HAHV}	$\overline{\text{HAK}}$		t_{CYC}	$2 t_{CYC}$	ns	

Note: It takes at least one machine cycle for $\overline{\text{HAK}}$ to vary after HRQ is fetched.

MB90220 Series

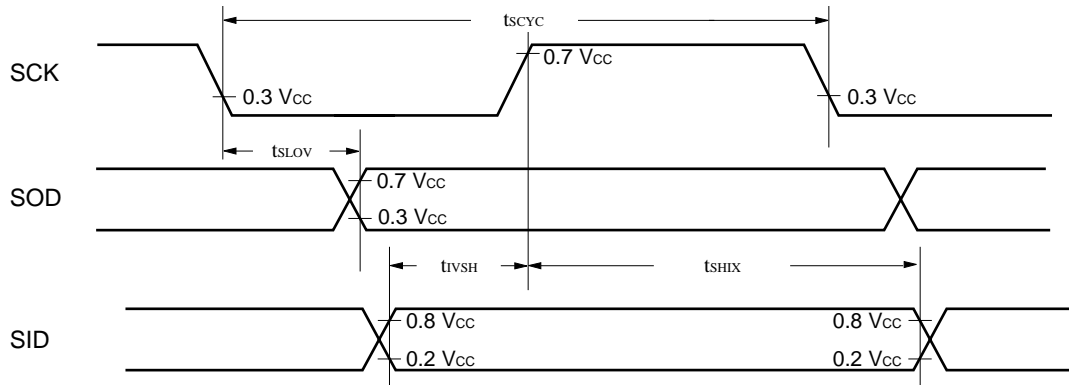

(9) UART Timing

Single-chip mode MB90223/224/P224B/W224B: ($V_{CC} = +4.5\text{ V to }+5.5\text{ V}$, $V_{SS} = 0.0\text{ V}$, $T_A = -40^\circ\text{C to }+105^\circ\text{C}$)
 MB90P224A/W224A : ($V_{CC} = +4.5\text{ V to }+5.5\text{ V}$, $V_{SS} = 0.0\text{ V}$, $T_A = -40^\circ\text{C to }+85^\circ\text{C}$)
 External bus mode : ($V_{CC} = +4.5\text{ V to }+5.5\text{ V}$, $V_{SS} = 0.0\text{ V}$, $T_A = -40^\circ\text{C to }+70^\circ\text{C}$)

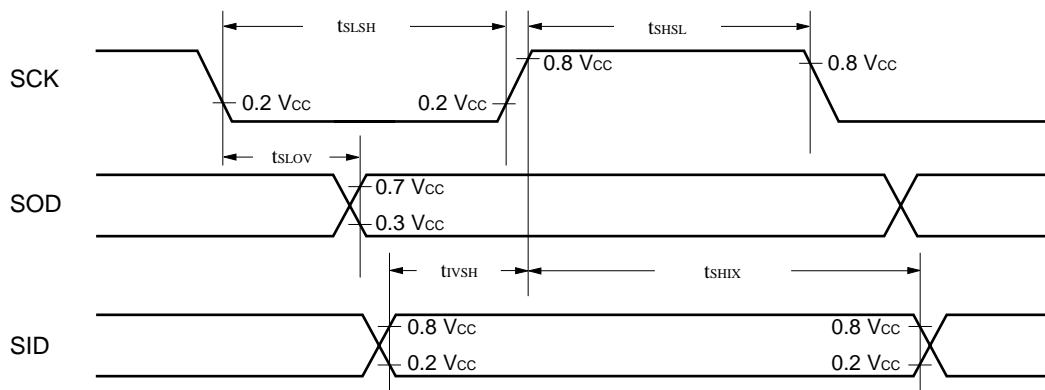

Parameter	Symbol	Pin name	Condition	Value		Unit	Remarks
				Min.	Max.		
Serial clock cycle time	t _{SCYC}	—	Load condition: 80 pF	8 t _{cyC}	—	ns	Internal clock operation output pin
SCLK ↓ → SOUT delay time	t _{SLOV}	—		-80	80	ns	
Valid SIN → SCLK ↑	t _{IVSH}	—		100	—	ns	
SCLK ↑ → Valid SIN hold time	t _{SHIX}	—		60	—	ns	
Serial clock "H" pulse width	t _{SHSL}	—	Load condition: 80 pF	4 t _{cyC}	—	ns	External clock operation output pin
Serial clock "L" pulse width	t _{SLSH}	—		4 t _{cyC}	—	ns	
SCLK ↓ → SOUT delay time	t _{SLOV}	—		—	150	ns	
Valid SIN → SCLK ↑	t _{IVSH}	—		60	—	ns	
SCLK ↑ → valid SIN hold time	t _{SHIX}	—		60	—	ns	

Notes: • These AC characteristics assume in CLK synchronization mode.
 • "t_{cyC}" is the machine cycle (unit: ns).

• Internal Shift Clock Mode

• External Shift Clock Input Mode

		AV_{RL}	—	AV_{SS}	—	AV_{RH}	V	
Reference voltage supply current	I_R	AV_{RH}	—	—	200	500	μA	
	I_{RH}		—	—	—	5^{*2}	μA	
Variation between channels	—	AN00 to AN15	—	—	—	4	LSB	

*1: These standards in this table are for MB90224/P224A/P224B/W224A/W224B.

MB90223: Minimum conversion time is $8.17\text{ }\mu\text{s}$ and minimum sampling time is $5\text{ }\mu\text{s}$ at $t_{CYC} = 83.4\text{ ns}$.

*2: The current value applies to the CPU stop mode with the A/D converter inactive ($V_{CC} = AV_{CC} = AV_{RH} = +5.5\text{ V}$).

Notes: (1) The error becomes larger as $|AV_{RH} - AV_{RL}|$ becomes smaller.

(2) Use the output impedance of the external circuit for analog input under the following conditions:

External circuit output impedance < approx. $10\text{ k}\Omega$ (Sampling time approx. $3.75\text{ }\mu\text{s}$, $t_{CYC} = 62.5\text{ ns}$)

(3) Precision values are standard values applicable to sleep mode.

(4) If V_{CC}/AV_{CC} or V_{SS}/AV_{SS} is caused by a noise to drop to below the analog input voltage, the analog input current is likely to increase. In such cases, a bypass capacitor or the like should be provided in the external circuit to suppress the noise.

MB90220 Series

• Analog Input Circuit Mode

Note: The values shown here are reference values.

6. A/D Converter Glossary

- Resolution:** Analog changes that are identifiable with the A/D converter
 When the number of bits is 10, analog voltage can be divided into $2^{10} = 1024$.
- Total error:** Difference between actual and logical values. This error is caused by a zero transition error, full-scale transition error, linearity error, differential linearity error, or by noise.
- Linearity error:** The deviation of the straight line connecting the zero transition point (“00 0000 0000” ↔ “00 0000 0001”) with the full-scale transition point (“11 1111 1111” ↔ “11 1111 1110”) from actual conversion characteristics
- Differential linearity error:** The deviation of input voltage needed to change the output code by 1 LSB from the theoretical value

$$1 \text{ LSB} = \frac{V_{FST} - V_{0T}}{1022}$$

$$1 \text{ LSB theoretical value} = \frac{AVRH - AVR_L}{1022}$$

$$\text{Linearity error} = \frac{V_{NT} - (N \times 1 \text{ LSB} + V_{0T})}{1 \text{ LSB}}$$

$$\text{Differential linearity error} = \frac{V_{NT} - V_{(N-1)T}}{1 \text{ LSB}} - 1$$

$$\text{Total error} = \frac{V_{NT} - \{(N + 0.5) \times 1 \text{ LSB theoretical value}\}}{1 \text{ LSB theoretical value}}$$

$$\left[\begin{array}{l} N = 0 \text{ to } 1022 \\ V_{NT(N=0)} = V_{0T} \\ V_{NT(N=1022)} = V_{FST} \end{array} \right.$$

$$N = 1 \text{ to } 1022$$

$$N = 0 \text{ to } 1022$$

EXAMPLE CHARACTERISTICS

(1) Power Supply Current

Note: These are not assured value of characteristics but example characteristics.

(2) Output Voltage

Note: These are not assured value of characteristics but example characteristics.

MB90220 Series

(3) Pull-up/Pull-down Resistor

Note: These are not assured value of characteristics but example characteristics.

(4) Analog Filter

Note: These are not assured value of characteristics but example characteristics.

■ INSTRUCTION SET (412 INSTRUCTIONS)

Table 1 Explanation of Items in Table of Instructions

Item	Explanation
Mnemonic	Upper-case letters and symbols: Represented as they appear in assembler Lower-case letters: Replaced when described in assembler. Numbers after lower-case letters: Indicate the bit width within the instruction.
#	Indicates the number of bytes.
~	Indicates the number of cycles. See Table 4 for details about meanings of letters in items.
B	Indicates the correction value for calculating the number of actual cycles during execution of instruction. The number of actual cycles during execution of instruction is summed with the value in the “cycles” column.
Operation	Indicates operation of instruction.
LH	Indicates special operations involving the bits 15 through 08 of the accumulator. Z: Transfers “0”. X: Extends before transferring. —: Transfers nothing.
AH	Indicates special operations involving the high-order 16 bits in the accumulator. *: Transfers from AL to AH. —: No transfer. Z: Transfers 00 _H to AH. X: Transfers 00 _H or FF _H to AH by extending AL.
I	Indicates the status of each of the following flags: I (interrupt enable), S (stack), T (sticky bit), N (negative), Z (zero), V (overflow), and C (carry). *: Changes due to execution of instruction. —: No change. S: Set by execution of instruction. R: Reset by execution of instruction.
S	
T	
N	
Z	
V	
C	
RMW	Indicates whether the instruction is a read-modify-write instruction (a single instruction that reads data from memory, etc., processes the data, and then writes the result to memory). *: Instruction is a read-modify-write instruction —: Instruction is not a read-modify-write instruction Note: Cannot be used for addresses that have different meanings depending on whether they are read or written.

MB90220 Series

Table 2 Explanation of Symbols in Table of Instructions

Symbol	Explanation
A	32-bit accumulator The number of bits used varies according to the instruction. Byte: Low order 8 bits of AL Word: 16 bits of AL Long: 32 bits of AL, AH
AH	High-order 16 bits of A
AL	Low-order 16 bits of A
SP	Stack pointer (USP or SSP)
PC	Program counter
SPCU	Stack pointer upper limit register
SPCL	Stack pointer lower limit register
PCB	Program bank register
DTB	Data bank register
ADB	Additional data bank register
SSB	System stack bank register
USB	User stack bank register
SPB	Current stack bank register (SSB or USB)
DPR	Direct page register
brg1	DTB, ADB, SSB, USB, DPR, PCB, SPB
brg2	DTB, ADB, SSB, USB, DPR, SPB
Ri	R0, R1, R2, R3, R4, R5, R6, R7
RWi	RW0, RW1, RW2, RW3, RW4, RW5, RW6, RW7
RWj	RW0, RW1, RW2, RW3
RLi	RL0, RL1, RL2, RL3
dir	Compact direct addressing
addr16	Direct addressing
addr24	Physical direct addressing
addr24 0 to 15	Bits 0 to 15 of addr24
addr24 16 to 23	Bits 16 to 23 of addr24
io	I/O area (000000H to 0000FFH)

(Continued)

(Continued)

Symbol	Explanation
#imm4 #imm8 #imm16 #imm32 ext (imm8)	4-bit immediate data 8-bit immediate data 16-bit immediate data 32-bit immediate data 16-bit data signed and extended from 8-bit immediate data
disp8 disp16	8-bit displacement 16-bit displacement
bp	Bit offset value
vct4 vct8	Vector number (0 to 15) Vector number (0 to 255)
()b	Bit address
rel ear eam	Branch specification relative to PC Effective addressing (codes 00 to 07) Effective addressing (codes 08 to 1F)
rlst	Register list

MB90220 Series

Table 3 Effective Address Fields

Code	Notation	Address format	Number of bytes in address extension*
00 01 02 03 04 05 06 07	R0 RW0 RL0 R1 RW1 (RL0) R2 RW2 RL1 R3 RW3 (RL1) R4 RW4 RL2 R5 RW5 (RL2) R6 RW6 RL3 R7 RW7 (RL3)	Register direct "ea" corresponds to byte, word, and long-word types, starting from the left	—
08 09 0A 0B	@RW0 @RW1 @RW2 @RW3	Register indirect	0
0C 0D 0E 0F	@RW0 + @RW1 + @RW2 + @RW3 +	Register indirect with post-increment	0
10 11 12 13 14 15 16 17	@RW0 + disp8 @RW1 + disp8 @RW2 + disp8 @RW3 + disp8 @RW4 + disp8 @RW5 + disp8 @RW6 + disp8 @RW7 + disp8	Register indirect with 8-bit displacement	1
18 19 1A 1B	@RW0 + disp16 @RW1 + disp16 @RW2 + disp16 @RW3 + disp16	Register indirect with 16-bit displacement	2
1C 1D 1E 1F	@RW0 + RW7 @RW1 + RW7 @PC + dip16 addr16	Register indirect with index Register indirect with index PC indirect with 16-bit displacement Direct address	0 0 2 2

* : The number of bytes for address extension is indicated by the "+" symbol in the "#" (number of bytes) column in the Table of Instructions.

Table 4 Number of Execution Cycles for Each Form of Addressing

Code	Operand	(a)*
		Number of execution cycles for each form of addressing
00 to 07	Ri RWi RLi	Listed in Table of Instructions
08 to 0B	@RWj	1
0C to 0F	@RWj +	4
10 to 17	@RWi + disp8	1
18 to 1B	@RWj + disp16	1
1C	@RW0 + RW7	2
1D	@RW1 + RW7	2
1E	@PC + dip16	2
1F	@addr16	1

* :“(a)” is used in the “cycles” (number of cycles) column and column B (correction value) in the Table of Instructions.

Table 5 Correction Values for Number of Cycles Used to Calculate Number of Actual Cycles

Operand	(b)*		(c)*		(d)*	
	+	byte	+	word	+	long
Internal register	+	0	+	0	+	0
Internal RAM even address	+	0	+	0	+	0
Internal RAM odd address	+	0	+	1	+	2
Even address not in internal RAM	+	1	+	1	+	2
Odd address not in internal RAM	+	1	+	3	+	6
External data bus (8 bits)	+	1	+	3	+	6

* :“(b)”, “(c)”, and “(d)” are used in the “cycles” (number of cycles) column and column B (correction value) in the Table of Instructions.

DIVWA, ear	2	*4	0	long (A)/word (ear) Quotient → word (A) Remainder → word (ear)	-	-	-	-	-	-	-	*	*	-
DIVWA, eam	2+	*5	*7	long (A)/word (eam) Quotient → word (A) Remainder → word (eam)	-	-	-	-	-	-	-	*	*	-
MUL A	2	*8	0	byte (AH) × byte (AL) → word (A)	-	-	-	-	-	-	-	-	-	-
MUL A, ear	2	*9	0	byte (A) × byte (ear) → word (A)	-	-	-	-	-	-	-	-	-	-
MUL A, eam	2+	*10	(b)	byte (A) × byte (eam) → word (A)	-	-	-	-	-	-	-	-	-	-
MULW A	2	*11	0	word (AH) × word (AL) → long (A)	-	-	-	-	-	-	-	-	-	-
MULW A, ear	2	*12	0	word (A) × word (ear) → long (A)	-	-	-	-	-	-	-	-	-	-
MULW A, eam	2+	*13	(b)	word (A) × word (eam) → long (A)	-	-	-	-	-	-	-	-	-	-

For an explanation of “(b)” and “(c)”, refer to Table 5, “Correction Values for Number of Cycles Used to Calculate Number of Actual Cycles.”

- *1: 3 when dividing into zero, 8 or 18 when an overflow occurs, and 18 normally.
- *2: 3 when dividing into zero, 10 or 21 when an overflow occurs, and 22 normally.
- *3: 4 + (a) when dividing into zero, 11 + (a) or 22 + (a) when an overflow occurs, and 23 + (a) normally.
- *4: When the dividend is positive: 4 when dividing into zero, 10 or 29 when an overflow occurs, and 30 normally.
When the dividend is negative: 4 when dividing into zero, 11 or 30 when an overflow occurs, and 31 normally.
- *5: When the dividend is positive: 4 + (a) when dividing into zero, 11 + (a) or 30 + (a) when an overflow occurs, and 31 + (a) normally.
When the dividend is negative: 4 + (a) when dividing into zero, 12 + (a) or 31 + (a) when an overflow occurs, and 32 + (a) normally.
- *6: (b) when dividing into zero or when an overflow occurs, and 2 × (b) normally.
- *7: (c) when dividing into zero or when an overflow occurs, and 2 × (c) normally.
- *8: 3 when byte (AH) is zero, 12 when the result is positive, and 13 when the result is negative.
- *9: 3 when byte (ear) is zero, 12 when the result is positive, and 13 when the result is negative.
- *10: 4 + (a) when byte (eam) is zero, 13 + (a) when the result is positive, and 14 + (a) when the result is negative.
- *11: 3 when word (AH) is zero, 12 when the result is positive, and 13 when the result is negative.
- *12: 3 when word (ear) is zero, 16 when the result is positive, and 19 when the result is negative.
- *13: 4 + (a) when word (eam) is zero, 17 + (a) when the result is positive, and 20 + (a) when the result is negative.

Note: Which of the two values given for the number of execution cycles applies when an overflow error occurs in a DIV or DIVW instruction depends on whether the overflow was detected before or after the operation.

MOVSW/MOVSWI	2	*2	*6	Word transfer @AH+ \leftarrow @AL+, counter = RW0	-	-	-	-	-	-	-	-	-	-
MOVSWD	2	*2	*6	Word transfer @AH- \leftarrow @AL-, counter = RW0	-	-	-	-	-	-	-	-	-	-
SCWEQ/SCWEQI	2	*1	*7	Word retrieval @AH+ - AL, counter = RW0	-	-	-	-	-	*	*	*	*	-
SCWEQD	2	*1	*7	Word retrieval @AH- - AL, counter = RW0	-	-	-	-	-	*	*	*	*	-
FILSW/FILSWI	2	5m +3	*8	Word filling @AH+ \leftarrow AL, counter = RW0	-	-	-	-	-	*	*	-	-	-

m: RW0 value (counter value)

*1: 3 when RW0 is 0, $2 + 6 \times (RW0)$ for count out, and $6n + 4$ when match occurs

*2: 4 when RW0 is 0, $2 + 6 \times (RW0)$ in any other case

*3: $(b) \times (RW0)$

*4: $(b) \times n$

*5: $(b) \times (RW0)$

*6: $(c) \times (RW0)$

*7: $(c) \times n$

*8: $(c) \times (RW0)$

Table 26 Multiple Data Transfer Instructions [18 Instructions]

Mnemonic	#	cycles	B	Operation	LH	AH	I	S	T	N	Z	V	C	RMW
MOVM @A, @RLi, #imm8	3	*1	*3	Multiple data transfer byte ((A) ← ((RLi))	—	—	—	—	—	—	—	—	—	—
MOVM @A, eam, #imm8	3+	*2	*3	Multiple data transfer byte ((A) ← (eam)	—	—	—	—	—	—	—	—	—	—
MOVM addr16, @RLi, #imm8	5	*1	*3	Multiple data transfer byte (addr16) ← ((RLi)	—	—	—	—	—	—	—	—	—	—
MOVM addr16, eam, #imm8	5+	*2	*3	Multiple data transfer byte (addr16) ← (eam)	—	—	—	—	—	—	—	—	—	—
MOVMW @A, @RLi, #imm8	3	*1	*4	Multiple data transfer word ((A) ← ((RLi))	—	—	—	—	—	—	—	—	—	—
MOVMW @A, eam, #imm8	3+	*2	*4	Multiple data transfer word ((A) ← (eam)	—	—	—	—	—	—	—	—	—	—
MOVMW addr16, @RLi, #imm8	5	*1	*4	Multiple data transfer word (addr16) ← ((RLi)	—	—	—	—	—	—	—	—	—	—
MOVMW addr16, eam, #imm8	5+	*2	*4	Multiple data transfer word (addr16) ← (eam)	—	—	—	—	—	—	—	—	—	—
MOVM @RLi, @A, #imm8	3	*1	*3	Multiple data transfer byte ((RLi) ← ((A))	—	—	—	—	—	—	—	—	—	—
MOVM eam, @A, #imm8	3+	*2	*3	Multiple data transfer byte (eam) ← ((A))	—	—	—	—	—	—	—	—	—	—
MOVM @RLi, addr16, #imm8	5	*1	*3	Multiple data transfer byte ((RLi) ← (addr16)	—	—	—	—	—	—	—	—	—	—
MOVM eam, addr16, #imm8	5+	*2	*3	Multiple data transfer byte (eam) ← (addr16)	—	—	—	—	—	—	—	—	—	—
MOVMW @RLi, @A, #imm8	3	*1	*4	Multiple data transfer word ((RLi) ← ((A))	—	—	—	—	—	—	—	—	—	—
MOVMW eam, @A, #imm8	3+	*2	*4	Multiple data transfer word (eam) ← ((A))	—	—	—	—	—	—	—	—	—	—
MOVMW@RLi, addr16, #imm8	5	*1	*4	Multiple data transfer word ((RLi) ← (addr16)	—	—	—	—	—	—	—	—	—	—
MOVMW eam, addr16, #imm8	5+	*2	*4	Multiple data transfer word (eam) ← (addr16)	—	—	—	—	—	—	—	—	—	—
MOVM bnk : addr16, *5	7	*1	*3	Multiple data transfer	—	—	—	—	—	—	—	—	—	—
bnk : addr16, #imm8				byte (bnk:addr16) ← (bnk:addr16)										
MOVMW bnk : addr16, *5	7	*1	*4	Multiple data transfer	—	—	—	—	—	—	—	—	—	—
bnk : addr16, #imm8				word (bnk:addr16) ← (bnk:addr16)										

*1: $5 + \text{imm8} \times 5$, 256 times when imm8 is zero.

*2: $5 + \text{imm8} \times 5 + (a)$, 256 times when imm8 is zero.

*3: Number of transfers $\times (b) \times 2$

*4: Number of transfers $\times (c) \times 2$

*5: The bank register specified by “bnk” is the same as for the MOVS instruction.

FUJITSU LIMITED

All Rights Reserved.

The contents of this document are subject to change without notice. Customers are advised to consult with FUJITSU sales representatives before ordering.

The information and circuit diagrams in this document are presented as examples of semiconductor device applications, and are not intended to be incorporated in devices for actual use. Also, FUJITSU is unable to assume responsibility for infringement of any patent rights or other rights of third parties arising from the use of this information or circuit diagrams.

The products described in this document are designed, developed and manufactured as contemplated for general use, including without limitation, ordinary industrial use, general office use, personal use, and household use, but are not designed, developed and manufactured as contemplated (1) for use accompanying fatal risks or dangers that, unless extremely high safety is secured, could have a serious effect to the public, and could lead directly to death, personal injury, severe physical damage or other loss (i.e., nuclear reaction control in nuclear facility, aircraft flight control, air traffic control, mass transport control, medical life support system, missile launch control in weapon system), or (2) for use requiring extremely high reliability (i.e., submersible repeater and artificial satellite).

Please note that Fujitsu will not be liable against you and/or any third party for any claims or damages arising in connection with above-mentioned uses of the products.

Any semiconductor devices have an inherent chance of failure. You must protect against injury, damage or loss from such failures by incorporating safety design measures into your facility and equipment such as redundancy, fire protection, and prevention of over-current levels and other abnormal operating conditions.

If any products described in this document represent goods or technologies subject to certain restrictions on export under the Foreign Exchange and Foreign Trade Law of Japan, the prior authorization by Japanese government will be required for export of those products from Japan.
