350MHz Single, Dual & Four Channel Arbitrary Function Generators

Tabor's WS835x is a 350MHz single, dual & four channel generator with the functionality of a function, arbitrary, modulation and pulse/pattern generator, all in one easy to use, high performance, compact stand alone bench top, which enables engineers to test analog, digital and mixed signals devices with a single instrument.

### Standard Waveforms

The WS835xA-DST has 11 built-in functions for quick and easy waveform generation. Front panel operations allows for easy selection and editing of all waveform parameters. All the standard waveforms can reach up to 125MHz with Sine and Square going as high as 350MHz.

### User Defined Waveforms

For more advanced users the WS835xA-DST with its 14-bit vertical resolution offers a standard 16Mpts memory depth and a 2GS/s sample clock for designing waveforms, with the ability to control and edit the value of each and every point any wave is possible.

### Modulation Waveforms

In addition to the capability of generating any shape and style of waveform with the arbitrary waveform generation power, the series can also do standard modulation schemes such as FM, AM, FSK, sweep and PSK, without sacrificing the power of the instrument control and output run modes.

### Pulse / Pattern Creation

Generating complex pulse trains has never been easier. The Pulse Composer is a powerful built-in tool that converts the WS835xA-DST to a very sophisticated Pulse/Pattern Generator, allowing to create literally any complex pulse train / pattern, whether it's a single pulse, multi-level, linear-points, initialization or preamble pattern definition, arbitrary bit design, user-defined or even standard random patterns with programmable resolution, so it doesn't matter if your application is radar communications, nanotechnology or serial bus testing, the pulse/pattern composer is the right tool for your application. Moreover, all the WS835xA-DST advanced trigger modes are applicable, hence one can choose to use the "step" mode to advance every bit independently or the "once" mode to advance a complete data block in one trigger event, enabling even more applications, such as trigger, clock and data protocols.

### OUTPUTS

#### MAIN OUTPUTS

<b>Connectors:</b>	Front panel SMA
<b>Type:</b>	Single-ended or differential
<b>Impedance:</b>	50Ω ±1%
<b>Protection:</b>	Short Circuit to Ground, 10s max

#### SYNC OUTPUT

<b>Connector:</b>	Front panel SMA
<b>Source:</b>	Channel 1 or channel 2
<b>Type:</b>	Single ended
<b>Waveform Type:</b>	
Pulse:	16 points width
WCOM:	Waveform complete
<b>Impedance:</b>	50Ω
<b>Amplitude:</b>	1V; doubles into high Z

#### Variable Position Control:

<b>Range:</b>	0 to segment length
<b>Resolution:</b>	16 points
<b>Rise/Fall Time:</b>	2ns, typ.

#### Variable Width Control:

<b>Range:</b>	16 points to segment length
<b>Resolution:</b>	16 points

#### MARKER OUTPUTS

<b>Number of Markers:</b>	4, Differentials
<b>Connectors:</b>	Rear panel SMB
<b>Amplitude Voltage:</b>	
Window:	0V to 1.25V, single-ended; 0V to 2.5V, differential
Low Level:	0V to 0.8V, single-ended; 0V to 1.6V, differential
Low Level:	0.5 V to 1.25V, single-ended; 0V to 2.5V, differential

<b>Resolution:</b>	10mV
<b>Accuracy:</b>	10% of setting
<b>Width Control:</b>	2 SCLK to segment length
<b>Position Control:</b>	
Range:	0 to segment length
Resolution:	2 points
<b>Resolution:</b>	4 digits
<b>Initial Delay:</b>	4ns±½ clock (Output to marker)
<b>Variable Delay:</b>	
Control:	0 to segment length
Range:	2 points
Resolution:	0 to segment length
Accuracy:	2 points
<b>Skew Between Mrk:</b>	10ps, typ.
<b>Rise/Fall Time:</b>	< 1ns, typ.

### INPUTS

#### TRIGGER & EVENT INPUTS

<b>Connector:</b>	
Tirgger In:	Front panel SMA
Event In:	Rear panel BNC
<b>Frequency Range:</b>	0 to 15MHz
<b>Input Impedance:</b>	10kΩ
<b>Polarity:</b>	Positive or negative, selectable
<b>Damage Level:</b>	±20V
<b>Sensitivity:</b>	100mV
<b>Trigger Level Control:</b>	
Range	-5V to 5V
Resolution	12 bit (2.5mV)
Accuracy	±(5% of setting + 2.5mV)
Sensitivity	0.2Vp-p
<b>Min. Pulse Width:</b>	10ns

#### EXTERNAL REFERENCE INPUT

<b>Connector:</b>	Rear panel SMB
<b>Input Frequency:</b>	10MHz / 100MHz
<b>Impedance:</b>	50Ω
<b>Voltage Swing:</b>	-5dBm to 5dBm
<b>Damage Level:</b>	10dBm

#### EXTERNAL SAMPLE CLOCK INPUT

<b>Connector:</b>	Rear panel SMA
<b>Voltage Swing:</b>	0dBm to 10dBm
<b>Input Impedance:</b>	50Ω
<b>Input Frequency:</b>	1GHz to 4GHz (Double the internal clock)
<b>Clock Divider:</b>	1/1, 1/2, 1/4, 1/256, separate for each channel
<b>Damage Level:</b>	15dBm

### RUN MODES

<b>Type:</b>	Continuous, self armed, armed, triggered, normal, override, gated, burst
<b>Continuous:</b>	A selected output function shape is output continuously.
<b>Self Armed:</b>	No start commands are required to generate waveforms.
<b>Armed:</b>	The output dwells on a DC level and waits for an enable command and then the output waveform is output continuously; An abort command turns off the waveform.
<b>Triggered:</b>	A trigger signal activates a single-shot or counted burst of output waveforms and then the instrument waits for the next trigger signal.
<b>Normal Mode:</b>	The first trigger signal activates the output; consecutive triggers are ignored for the duration of the output waveform.
<b>Override Mode:</b>	The first trigger signal activates the output; consecutive triggers restart the output waveform regardless if the current waveform has been completed or not.
<b>Gated:</b>	A waveform is output when a gate signal is asserted. The waveform is repeated until the gate signal is de-asserted. Last period is always completed.
<b>Burst:</b>	Upon trigger, outputs a Dual or multiple pre-programmed number of waveform cycles from 1 through 1M.
