

60 V 100 mA Low Power Voltage Regulator for Industrial Applications

No. EY-397-190606

OVERVIEW

The R1561x is a CMOS-based low power voltage regulator featuring 60 V input voltage and 100 mA output current. The device includes a short current limit circuit, an overcurrent protection circuit and a thermal shutdown. These features make the R1561x an ideal constant voltage power source for industrial applications. This is a high-reliability semiconductor device for industrial applications (-Y) that has passed both the screening at high temperature and the reliability test with extended hours. This line of products operate in a wide temperature range from low temperature to high temperature to support harsh environment applications.

KEY BENEFITS

- Low power consumption and excellent transient response help to provide stable power supply.
- The input voltage range is as wide as 5.5 V to 60 V, and the output voltage accuracy is as high as $\pm 0.8\%$.
- High heat dissipation and space-saving HSOP-6J and TO-252-5-P2 packages.

KEY SPECIFICATIONS

- Input Voltage Range (Max. Rating): 5.5 V to 60 V (80 V)
- Operating Temperature Range: -50°C to 125°C
- Supply Current: Typ. 20 μA
- Dropout Voltage: Typ. 1.3 V
($I_{\text{OUT}} = 100 \text{ mA}$, $V_{\text{OUT}} = 5.0 \text{ V}$)
- Output Voltage Accuracy: $\pm 0.8\%$ ($T_a = 25^{\circ}\text{C}$)
- Temp. Coefficient of Output Voltage: Typ. $\pm 100 \text{ ppm}/^{\circ}\text{C}$
- Line Regulation: Typ. $0.01\%/V$ ($6 \text{ V} \leq V_{\text{IN}} \leq 60 \text{ V}$)
- Short-circuit Current Limiting: limits to Typ. 50 mA
- Overcurrent Protection: triggers at Typ. 150 mA
- Thermal Shutdown: triggers at Typ. 165°C

ABSOLUTE MAXIMUM RATINGS

Absolute Maximum Ratings

Symbol	Parameter		Rating	Unit	
V _{IN}	Input Voltage		-0.3 to 80	V	
V _{IN}	Peak Inrush Voltage ⁽¹⁾		90	V	
V _{CE}	CE Pin Input Voltage		-0.3 to 80	V	
V _{OUT}	Output Voltage		-0.3 to V _{IN} + 0.3 ≤ 80	V	
I _{OUT}	Output Current		150	mA	
P _D	Power Dissipation ⁽²⁾	HSOP-6J	JEDEC STD.51-7	3400	mW
		TO-252-5-P2	JEDEC STD.51-7	4800	
T _j	Junction Temperature		-50 to 150	°C	
T _{stg}	Storage Temperature Range		-55 to 150	°C	

ABSOLUTE MAXIMUM RATINGS

Electronic and mechanical stress momentarily exceeded absolute maximum ratings may cause permanent damage and may degrade the life time and safety for both device and system using the device in the field. The functional operation at or over these absolute maximum ratings is not assured.

RECOMMENDED OPERATING CONDITIONS

Recommended Operating Conditions

Symbol	Parameter	Rating	Unit
V _{IN}	Input Voltage	5.5 to 60	V
T _a	Operating Temperature Range	-50 to 125	°C

RECOMMENDED OPERATING CONDITONS

All of electronic equipment should be designed that the mounted semiconductor devices operate within the recommended operating conditions. The semiconductor devices cannot operate normally over the recommended operating conditions, even if they are used over such conditions by momentary electronic noise or surge. And the semiconductor devices may receive serious damage when they continue to operate over the recommended operating conditions.

⁽¹⁾ Duration: 200 ms or less

⁽²⁾ Refer to *POWER DISSIPATION* for detailed information.

ELECTRICAL CHARACTERISTICS

$C_{IN} = 0.1 \mu\text{F}$ / $C_{OUT} = 10 \mu\text{F}$, unless otherwise noted.

The specifications surrounded by are guaranteed by design engineering at $-50^\circ\text{C} \leq T_a \leq 125^\circ\text{C}$.

R1561x Electrical Characteristics

($T_a = 25^\circ\text{C}$)

THEORY OF OPERATION

Thermal Shutdown

If the junction temperature increases above 165°C (Typ.), the operation of the regulator would stop. And if the junction temperature decreases below 135°C (Typ.), the operation of the regulator would restart. Unless the causes of temperature rising are removed, the regulator repeats turning on and off and the output waveform becomes a pulse shape.

APPLICATION INFORMATION

R1561x Typical Applications

Typical Application for IC Chip Breakdown Prevention

When a sudden surge of electrical current travels along the VOUT pin and GND due to a short-circuit, electrical resonance of a circuit involving an output capacitor (C_{OUT}) and a short circuit inductor generates a negative voltage and may damage the device or the load devices. Connecting a schottky diode (D) between the VOUT pin and GND has the effect of preventing damage to them.

R1561x Typical Application for IC Chip Breakdown Prevention

R1561x-Y

No. EY-397-190606

Equivalent Series Resistance vs. Output Current

It is recommended that a ceramic type capacitor be used for this device. However, other types of capacitors having lower ESR can also be used. The relation between the output current (I_{OUT}) and the ESR of output capacitor is shown below.

Measurement Conditions

Frequency Band: 10 Hz to 2 MHz

Measurement Temperature: -40°C to 125°C

Capacitor: C1 = Ceramic 0.1 μ F, C2 = Ceramic 10.0 μ F

ESR: 0 to 100 Ω

V_{OUT} : 1.8 V, 5.0 V

It is confirmed that the output noise level is less than the specified value (40 μ Vrms) under the measurement conditions above.

TECHNICAL NOTES

The performance of a power source circuit using this device is highly dependent on a peripheral circuit. A peripheral component or the device mounted on PCB should not exceed its rated voltage, rated current or rated power. When designing a peripheral circuit, please be fully aware of the following points.

Phase Compensation

A phase compensation is provided to secure stable operation even when the load current is varied. For this purpose, use a 10- μ F or more output capacitor (C_{OUT}) with good frequency characteristics and proper ESR (Equivalent Series Resistance). In case of using a tantalum type capacitor with a large ESR, the output might become unstable. Evaluate your circuit including consideration of frequency characteristics. Connect a 0.1- μ F or more input capacitor (C_{IN}) between the VDD and GND pins with shortest-distance wiring.

PCB Layout

As for the HSOP-6J package, ensure that the GND pins (Pin No. 2, 4 and 5) are connected to each other and the ground plane.

Operating the Device below the Minimum Operating Voltage

Operating the device below the recommended operating voltage range can make the output voltage unstable and make the output voltage higher than the set output voltage (V_{SET}) of the device.

In the case of turning on the VIN and CE pins at the same time, both pins must be turned on using a 100-V/ms or more slew rate in order to prevent the unstable operation upon start-up. In the case of turning on the VIN pin using a 100-V/ms or less slew rate, the CE pin must be turned on after the supply voltage becomes 5.5 V or more.

In the case of turning off the VIN and CE pins at the same time, both pins must be turned off using a steep slew rate, -100 V/ms or higher in order to prevent the unstable operation. In the case of turning off the VIN pin using a slow rate, lower than -100 V/ms, the CE pin must be turned off before the supply voltage decreases to 5.5 V.

1. The products and the product specifications described in this document are subject to change or discontinuation of production without notice for reasons such as improvement. Therefore, before deciding to use the products, please refer to our sales representatives for the latest information thereon.
2. The materials in this document may not be copied or otherwise reproduced in whole or in part without prior written consent of our company.
3. Please be sure to take any necessary formalities under relevant laws or regulations before exporting or otherwise taking out of your country the products or the technical information described herein.
4. The technical information described in this document shows typical characteristics of and example application circuits for the products. The release of such information is not to be construed as a warranty of or a grant of license under our company's or any third party's intellectual property rights or any other rights.
5. The products listed in this document are intended and designed for use as general electronic components in standard applications (office equipment, telecommunication equipment, measuring instruments, consumer electronic products, amusement equipment etc.). Those customers intending to use a product in an application requiring extreme quality and reliability, for example, in a highly specific application where the failure or misoperation of the product could result in human injury or death (aircraft, spacevehicle, nuclear reactor control system, traffic control system, automotive and transportation equipment, combustion equipment, safety devices, life support system etc.) should first contact us.
6. We are making our continuous effort to improve the quality and reliability of our products, but semiconductor products are likely to fail with certain probability. In order to prevent any injury to persons or damages to property resulting from such failure, customers should be careful enough to incorporate safety measures in their design, such as redundancy feature, fire containment feature and fail-safe feature. We do not assume any liability or responsibility for any loss or damage arising from misuse or inappropriate use of the products.
7. Anti-radiation design is not implemented in the products described in this document.
8. The X-ray exposure can influence functions and characteristics of the products. Confirm the product functions and characteristics in the evaluation stage.
9. WLCSP products should be used in light shielded environments. The light exposure can influence functions and characteristics of the products under operation or storage.
10. There can be variation in the marking when different AOI (Automated Optical Inspection) equipment is used. In the case of recognizing the marking characteristic with AOI, please contact our sales or our distributor before attempting to use AOI.
11. Please contact our sales representatives should you have any questions or comments concerning the products or the technical information.
